Jordan Article 5 Summary

BG. Gen Al-Maiteh Falah
Royal Engineer Corps

21 June 2004
GICHD

Introduction

The agenda of my presentation is to give you an overview of the Jordan Article 5 Implementation Plan.

I will not have time to go into all the details so will take this opportunity to highlight some more general points that are in our report that will we be submitting today.
Jordan lies in the Middle East region, an unstable area, which has witnessed many conflicts. The problem started at the end of the 1967 war, when Israel occupied the West Bank and the emerging of a new cease-fire line. During years ‘68 and ‘69 the region was affected by the attritions of war accompanied by infiltration operations.

Mines were planted along the northern and western borders of the country and to the Dead Sea in the south. In the western slopes of the Eastern Highlands, all the avenues of approach from Israel also have many fields and on the other side of the Cease-fire line. After restoring the occupied Jordanian Territories a considerable number of mines were identified.
The total number of planted mines in Jordan is (304,653). The JAF planted up to (231,528) mines, of these (151,028) are AP and 80,500 are AT. While the Israeli Defense Forces planted 73,125 mines in Araba Valley and Albaqura covering 48.511 m² of the fertile lands restored to Jordan through the Cease-Fire Agreement.

In addition to the above Jordan still suffering from the residuals of UXOs spread in many locations. Over the past three decades the REC has conducted a through inspection and has disposed of thousands of UXOs, however there are still many locations that are still categorized as suspected areas.
Jordan Mine Action

Because of the size of the problem and its social and economic impact, Jordan in 1993 through the REC lunched and ambitious comprehensive demining program depending on our assets and by a sole Jordanian finance aiming at:

- Protecting people from the hazard of mines
- Reusing the lands for agriculture, tourism, and cultural reasons
- Establishing new industrial projects, new highways and rebuilding the current ones
- Full coordination with the national community for demining, rehabilitation
- Committed to execute Ottawa Treaty Articles

REC has been able to achieve a great deal, characterized by the removal of 101,560 mixed mines until the beginning of 2004, which means that Jordan in his future vision went farther than what Ottawa Treaty is seeking to accomplish, this number resemble one third (1/3) of the total number of planted mines, covering more than 40% of the total infected area for future agricultural investment (in 2003 we cleared 556 mixed type mines and disposed of 1,890 UXO).

The work was done through the deployment of (20) demining teams, each consisting of 20 persons in addition to 5 minesweepers and many soil removing vehicles (loaders, bulldozers and heavy trucks) and administrative vehicles.
### Remaining mines

101560 CLEARED
The following priorities were adopted in order to guarantee the continuing success and minimizing the side effects of the problem of mines:

- Minefields close to densely inhabited areas
- Minefields hindering national economic projects
- Minefields close to tourist, sacred and historical sites
- Minefields hindering infrastructure projects
- Minefields hindering individual and small economic development projects
- Security minefields (Jordanian – Syrian borders)
- Israeli minefields

There is a huge amount of work to be accomplished by 2009 and with the support of the international community we feel we can meet our strategic clearance objectives which comprises of three basic phases:

- **Phase I**: 1999-2005: demining in Jordan Valley and the Eastern Heights
- **Phase II**: 2005-2007: Security Zone (Jordanian – Syrian borders)
- **Phase III**: 2007-2009: Demining remaining suspected areas in western areas
FOREIGN ASSISTANCE

Jordan collaboration with the donors started in 1996 to assist JDP, the total assistance received is about 11 M US $, the major donors were:

- The United States of America : 7.291 M US$
- Norway : 1.591 M US$
- Canada : 1.278 M US$
- United Kingdom : 0.5 M sterling bound
- Federal Republic of Germany : 116,500.0 DM

The present confirmed levels of funding for 2005-09 unfortunately will not meet the needs of Jordan if it intends to meet its 2009 target. We are appealing to the international community for help in this regard.

Casualties Rehabilitation

Since 1969 the total number of casualties is 529; classified as follows:

<table>
<thead>
<tr>
<th></th>
<th>Civilian</th>
<th>Military</th>
<th>Peacekeeping Forces</th>
<th>Engineers</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>212</td>
<td>132</td>
<td>13</td>
<td>172</td>
</tr>
</tbody>
</table>

62 Engineers have been injured due to mine incidents casualty since 1993, of whom 13 were involved in UN Peacekeeping Missions abroad.

The injury rate for the demining program is relatively low and acceptable (one injury per 1500 mines cleared).

We are trying to reach in our services to the comprehensive rehabilitation and our efforts know toward this goal.
Mine Awareness

REC started a National Mine Awareness Program in 1999, so different mine awareness functions running annually nationwide such as lectures, seminars for schools, universities, and local societies, also distributing pamphlets, brochures and T-shirts.

CHALLENGES

The following challenges may affect negatively the laid time for clearing and disposing the mine inventory in Jordan.
High temperature Especially in Jordan Valley

Erosion and Shifting Minefields

Heavy Vegetation
Sensitivity of Mines Due to the Passage of Time

Shortage of communications equipment.
Shortage of Specialty Clearance Equipment

Deeply Buried Mines
Some minefields in Swampy Areas

Shortage of protection equipment

Shortage of spare parts for minesweepers and earth moving equipment
Sustainment of the equipment which enable us to do our work more efficiently (detectors, batteries, battery charger, faxes & scanners, etc)

In spite of these difficulties the demining project operated by REC is considered world widely as the most efficient and successful projects and it set the standards for demining projects.
Heavy Equipment: Mine sweepers, Earth Moving Equipment, Detectors
Protective Equipment: suites, helmets, visors, hand protectors
Ambulances and First Aid Kits
Marking Kit
Administrative vehicles
Jordan Free from landmines

Applying new coordinated systems, in order to locate the mines with greater precision

Establishing a regional training center for demining and rehabilitation specially in our region (Middle East) which is suffering from unstable condition

Establishing a national team for mine awareness

More cooperation between all parties through a continues meetings, workshops to show and rise our achievements and mutual our ideas and thoughts to encourage other countries to sign on the treaty
I wish from you all to put our hands together to fight against the hidden killer to reduce the suffering and to offer humanitarian relief to the growing numbers of mine victims and convert “tears to smiles” and reach that day world free from landmine, so this well happen if all of us sign on Ottawa Treaty.

God bless you all, and a grant you wisdom in your deliberations and strength in all your endeavors.
