STATEMENT BY

MR IAN MANSFIELD, DEPUTY DIRECTOR

GENEVA INTERNATIONAL CENTRE FOR
HUMANITARIAN DEMINING
(GICHD)

ASSISTANCE TO MINE AFFECTED STATES PARTIES –
CLEARING MINED AREAS

Mr. President,

The Geneva International Centre for Humanitarian Demining (GICHD) welcomes the Geneva Progress Report 2008, and the information it provides on the actions taken by States Parties to fulfill their Article 5 obligations, and also to achieve the respective action points in the Nairobi Action Plan. As the Nairobi Action Plan mentions, the GICHD is one of the actors who are in a position to provide assistance to States Parties, and I am pleased to provide a short update on the relevant aspects of our operational work.

Standards

Action #21 mentions support for the International Mine Action Standards, or IMAS. The IMAS were developed to improve safety and efficiency in mine action by providing guidance, establishing principles and, in some cases, by defining international requirements and specifications. They provide a frame of reference that encourages the sponsors and managers of mine action programmes and projects to achieve and demonstrate agreed levels of effectiveness and safety.
The GICHID manages the development and updating of the IMAS on behalf of the United Nations, and is currently working on a range of IMAS dealing with the topic of land release. The GICHID has developed an outreach programme and training package to assist mine-affected countries develop their own national standards, in order that they meet their obligations under Article 5 of the Treaty.

Information Management

Action #24 highlights making best use of management tools, such as the Information Management System for Mine Action, IMSMA. The GICHID has produced IMSMA as a standard database for collecting, storing and analyzing mine action data. The system is now deployed to 48 mine action programmes and six training centres, and is regarded as the “standard” system by the United Nations. The GICHID provides free installation of the system, operator training and system development. An updated version of the system has been installed in a number of programmes over the past year. In the future the GICHID plans to implement a number of measures to improve the utilization of the system. These include: support to local customization of the system, support development in order to make IMSMA a strategic tool of information and programme management, and support broader distribution of the system to relevant actors, such as national and international organizations as well as operators. Stronger partnerships will be developed with UNMAS, UNDP and other relevant actors.

Technology

Actions 25 and 26 deal with the issue of improving mine clearance technologies. In September this year the GICHID, along with UNMAS, hosted a technology workshop for field users. The workshop covered a wide range of practical topics, including the use of new technology to enhance the process of land released through technical survey. The GICHID is committed to assist with the practical sharing of technical information and equipment between States Parties, and in line with this recently published a “Guidebook on Detection Technologies” as well as the usual equipment catalogues on detectors and machines. The GICHID has assisted a number of countries to undertake equipment trials.
Land Release

The Geneva Progress Report 2008 highlights the value of States Parties making use of the full range of emerging practical methods to release more rapidly areas suspected to contain anti-personnel mines. The GICHDI has made the issue of land release a priority, and is undertaking a range of work. A publication titled “A Guide to Land Release – Non-Technical Methods” was published last year, and it gave best practice examples of non-technical methods to release land in six countries. We are currently working on another guide book on technical methods, and as mentioned earlier, we are working on drafting a series of three International Mine Action Standards related to land release.

Linking Mine Action with Development.

Finally, the GICHDI, along with Canada, the UK and UNDP, have been active in the area of linking mine action to development pursuant to Action #47. For the past two years the GICHDI has had a full time research officer working on LMAD, and in that that time the LMAD network has expanded to include over 200 mine action and development practitioners. The GICHDI has produced a series of guidelines for donors, mine action authorities and development NGOs. These were released at the LMAD Contact Group meeting on Monday. Finally, a regional workshop titled “Tackling Poverty in Conflict Affected Contexts: Linking development Security and the Remnants of Conflict” was held in Vietnam earlier this month.

Mr. President.

The GICHDI notes with gratitude the encouragement mentioned in the Geneva Progress Report and Action 56 of the NAP for the GICHDI (and others) to continue to provide “invaluable support” to the work of the States Parties. We have done this with enthusiasm in the past, and we will continue to do so in the future with the same efficiency.

27 November 2008
