Notes on using the cover page:

1. The cover page can be used as a complement to submitting detailed forms adopted at the First and Second Meetings of the States Parties in instances when the information to be provided in some of the forms in an annual report is the same as it would be in past reports. That is, when using the cover page, only forms within which there is new information needs to be submitted.

2. The cover page can be used as a substitute for submitting detailed forms adopted at the First and Second Meetings of the States Parties only if all of the information to be provided in an annual report is the same as in past reports.

3. If an indication is made on the cover sheet that the information to be provided with respect to a particular form is unchanged in relationship to a previous year’s form, the date of submission of the previous form should be clearly indicated.

Form I  Measures to provide warning to the population

Article 7.1  "Each State Party shall report to the Secretary-General ... on:
   i) The measures taken to provide an immediate and effective warning to the population in relation to all areas
      identified under paragraph 2 of Article 5."

Remark: In accordance with Article 5, para.2: "Each State Party shall make every effort to identify all areas under its
jurisdiction or control in which anti-personnel mines are known or suspected to be emplaced and shall ensure as soon
as possible that all anti-personnel mines in mined areas under its jurisdiction or control are perimeter-marked,
monitored and protected by fencing or other means, to ensure the effective exclusion of civilians, until all anti-
personnel mines contained therein have been destroyed. The marking shall at least be to the standards set out in the
Protocol on Prohibitions or Restrictions on the Use of Mines, Booby-Traps and Other Devices, as amended on 3 May
May Be Deemed to Be Excessively Injurious or to Have Indiscriminate Effects".

State [Party]: ______________________________ reporting for time period from __________________ to ____________

[Narrative:]
Form J  Other relevant matters

Remark: States Parties may use this form to report voluntarily on other relevant matters, including matters pertaining to compliance and implementation not covered by the formal reporting requirements contained in Article 7. States Parties are encouraged to use this form to report on activities undertaken with respect to Article 6, and in particular to report on assistance provided for the care and rehabilitation, and social and economic reintegration, of mine victims.

State [Party]: HUNGARY reporting for time period from 1/1/2011 to 31/12/2011

[Narrative / reference to other reports:]

Detailed description on data provided in Form C (Location of mined areas) under point 2 (Areas suspected to contain mines)

Location

Patches of land on the territory of Hungary, straddling the Hungarian-Croatian state border line, located from border sign no. D1 (Dráva river leaving the borderline near Keselyősfapusza-dél (Keselyősfapusza-South), belonging to municipality Matty) to border sign no. D417 (right bank of Duna river belonging to municipality Kőlked). Suspected area contains a stripe of land of 1.000 m width and 79.683 m length along the borderline.

Circumstances of emplacement, area characteristics

In the course of military operations during the war in the former Yugoslavia, mostly in the period from 1991 to 1992 and from 1994 to 1995, extensive emplacements of anti-personnel and anti-tank landmines were performed on Yugoslavian (Croatian) territory, in the immediate vicinity of the above mentioned borderline. Emplaced mines may include inter alia types of PMR-2, PMR-2A and OMSZ-2. Due to possible inaccurate emplacements, as well as natural processes (i.e. terrain movements caused by waters), it cannot be excluded that mined areas may, to a minor extent, extend over Hungarian territory. Since no exact data and maps of the emplacements are available, the possible quantity of mines on Hungarian territory is extremely difficult to estimate, but is unlikely to exceed 100 pieces. Mines may eventually be located sporadically in a range from a few centimetres to a few meters from the state border line on the Hungarian side of the border.
**Risks to population**
The possibly contaminated area is located out of populated places; it is grown over by thick vegetation. Human activities are practically limited to border control patrolling, civilian trespassing is rare. Nevertheless, a hundred of warning signs were placed in the area and inhabitants of 13 municipalities affected were duly informed about the risks of entering.

**Measures to be taken**

On 7 September 2011 Hungary and Croatia launched, with financial support of the European Union, a joint project called „Rehabilitation of land mine contaminated sites in the Drava-Danube area“. The project is part of the Hungary-Croatia European Union’s IPA (Instrument for the Pre-Accession Assistance) Cross-Border Co-operation Programme of 2007-2013, which aims to create a sustainable environment and develop tourism, as well as co-operative economic and intercommunity human resources between the two countries and provides technical assistance for that purpose.

In order to convert the area entirely safe and freely accessible for all and suitable for civilian purposes, Hungarian and Croatian authorities together took steps to ensure that those areas are totally clear of mines. To that end, a sum of 3.5 million euros was allocated to the Police of Baranya County (Hungary) and the Croatian Mine Action Centre (CROMAG, co-beneficiary of the project) to carry out the necessary works in the affected areas of both sides of the border. The project started in September 2011 and shall be implemented in a 24-month timeframe according to the following plan:

**Phase I (1/9/2011 – 31/8/2012)**

1. **Surveying and marking of mine suspected areas** – work in progress as of 30/4/2012

   Objectives of the survey are to:
   - Define the size and distribution of mine contaminated and mine suspected areas (including digital ortophoto);
   - Define the structure of mine suspected areas according to the methods of demining (categorization of areas on those for demining and areas for technical survey);
   - Define the structure of the mine suspected areas by structure of land;
   - Collect all other necessary information in order to produce well developed documentation.

2. **Establishing a Mine Information Database (MID)**
   During the implementation of the project the Hungarian Mine Informational Database (MID) containing the data on mine suspected areas and their priority sequence for demining is to be created based on data derived from surveying.
Phase II (1/9/2012 – 31/8/2013)

1. Demining of mine contaminated and mine suspected areas
All activities will be performed in accordance with CROMAC Standard Operating Procedures (SOPs) and in line with the International Mine Action Standards (IMAS). CROMAC SOPs represent a set of prescribed operating procedures according to which CROMAC conducts its operations. Beside the experience, CROMAC SOPs were made based on IMAS 04.10, 08.10, 09.10, 09.30, 11.10, 11.20, 10.20 and 10.50. Surveying and demining activities will be implemented with procuring the participants with the most considerable expertise from the public market.

2. Environmental rehabilitation of the target area
Demining activities under this project will be performed in EU’s ecologically protected NATURA 2000 areas on both Hungarian and Croatian borderland. The target territory - a hatching area of birds and habitat of protected animals and plants - is under increased natural protection. It is essential to preserve the propagated specimens of protected plants and marker specimens of protected animals. Alterations with possibly negative effects caused in the nature shall be assessed and handled, thus environmental assessment is elaborated, including authority provisions assigning the natural values (flora and fauna) to be protected.
