CONVENTION ON THE PROHIBITION OF THE USE, STOCKPILING, PRODUCTION AND TRANSFER OF ANTI-PERSONNEL MINES AND ON THEIR DESTRUCTION

Reporting Formats for Article 7

STATE [PARTY]: **Afghanistan**

POINT OF CONTACT:

Mohammad Shafiq Yosufi, Director Directorate of Mine Action Coordination

(DMAC[1]), Afghanistan National Disaster Management Authority (ANDMA).
Email: mohammadSY@dmac.gov.af
Tel: +93 (0) 705 966 401

(Name, organization, telephone, fax, email)

(ONLY FOR THE PURPOSES OF CLARIFICATION)

[1] The government department working for mine action previously known as Department of Mine Clearance (DMC) was officially changed to DMAC in 2015.

COVER PAGE OF THE ANNUAL ARTICLE 7 REPORT

NAME OF STATE [PARTY]: Afghanistan

REPORTING PERIOD: **1St January 2018** **(dd/mm/yyyy)** **to 31st December 2018** **(dd/mm/yyyy)**

Form A: National implementation measures: ✓ changed unchanged (last reporting: yyyy)	**Form E: Status of conversion programs**: changed ✓ unchanged (last reporting: yyyy) non-applicable	**Form I: Warning measures**: ✓ changed unchanged (last reporting: yyyy) non-applicable
Form B: Stockpiled anti-personnel mines: ✓ changed unchanged (last reporting: yyyy) non-applicable	**Form F: Program of APM destruction**: ✓ changed unchanged (last reporting: yyyy) non-applicable	**Form J: Other Relevant Matters** ✓ changed unchanged (last reporting: yyyy) non-applicable
Form C: Location of mined areas: ✓ changed unchanged (last reporting: yyyy) non-applicable	**Form G: APM destroyed**: ✓ changed unchanged (last reporting: yyyy) non-applicable	
Form D: APMs retained or transferred: ✓ changed unchanged (last reporting: yyyy) non-applicable	**Form H: Technical characteristics**: changed unchanged (last reporting: yyyy) ✓ unchanged (last reporting: yyyy)	

LIST OF ACRONYMS:Plan

AABRAR	Afghan Amputee Bicyclists for Rehabilitation and Recreation
AAR	Association for Aid and Relief
ACAP	Afghan Civilian Assistance Program
ACBL	Afghan Campaign to Ban Landmines
AGE	Anti Governmental Element
AIM	Abandoned Improvised Mine
AMAS	Afghanistan Mine Action Standards
ANDMA	Afghanistan National Disaster Management Authority
ANDSF	Afghan National Security and Defense Force
AP	Anti-personnel
APM	Anti-Personnel Mine
APMBT	Anti-Personnel Mine Ban Treaty
AREA	Agency for Rehabilitation and Energy Conservation in Afghanistan
ATC	Afghan Technical Consultant
AV	Anti Vehicle
CBR	Community Based Rehabilitation
CCW	Convention on Certain Conventional Weapons
CHA	Confirmed Hazardous Area
COMAC	Conflict Mitigation Assistance for Civilian
CRPD	Convention on Rights of Person with Disability
CWD	Child with Disability
DAO	Development and Ability Organization
DDG	Danish Demining Group
DMAC	Directorate of Mine Action Coordination DSCG
DSCG	Disability Stakeholder Coordination Group
DT	Demining Team
EOD	Explosive Ordinance Disposal
ERW	Explosive Remnant of War
GICHD	Geneva International Centre for Humanitarian Demining
HALO Trust	Hazardous Area Life Support Organization Trust
H.E.	His Excellency
IDP	Internal Displaced People

ToT	Training of Trainer
TS	Technical Survey
UNAMA	United Nations Assistance Mission in Afghanistan
UNICEF	United Nations International Children's Emergency Fund
UNMAS	United Nations Mine Action Service
USAID	The United States Agency for International Development
VA	Victim Assistance

Background:

Four decades of armed conflict in Afghanistan have rendered Afghanistan a country heavily affected by landmines and Explosive Remnants of War (ERW), including Improvised Explosive Devices (IEDs). While a tremendous effort by the humanitarian community has seen much contamination removed, ongoing military engagements in fighting are resulting in new contamination, adding to the lethal legacy of previous conflicts.

Since the establishment of Afghanistan Mine Action Programme in 1989, it has successfully cleared vast areas in the country, reducing the impact of mines and ERW contamination on the lives and livelihoods of civilians and supported reconstruction and development throughout the country. Between 2001 and 2013, the number of casualties fell significantly to a monthly average of 36, but since then until 2017 this number increased to a monthly average of 180 casualty in 2017. During the year 2018 it again decreased to 112 casualty per month, this was due to shortage of resources in collection of data in the programme. 1 % of the recent year civilian casualties was due to mine, 46 % due to ERW and the remaining 53 % was due to Victim Operated IEDs.

Since its establishment, the Mine Action Programme of Afghanistan has cleared nearly 77 percent of known "legacy" contamination left from pre-2001 conflicts. There are still 3,710 identified hazardous areas covering 1,763 sq. km of contaminated land in Afghanistan which require mine action intervention. This consists of 1,137 sq. km post 2001 contamination and 626 sq. km legacy (pre-2001) contamination.
Among Post 2001 (1,137 sq. km) about 630 Sq. km is firing Range area & 412 Sq. km is Initial Hazards area (IHA) which need proper survey (NTS/TS) & 95 sq. km is proper surveyed (SHA/CHA) Hazards. Among the Pre 2001 (626 sq. km) about 575 Sq. km is proper CHA/SHA area and 51 Sq. km is Initial Hazard Area (IHA) hazards which need proper survey (NTS/TS)

Available data suggests that the increasing use of Abandoned Improvised Mine (AIM) is the greatest challenge faced by the mine action sector in Afghanistan today. During the Afghan year 1397 which coincides with the period April 2018 – March 2019, the United Nations Assistance Mission in Afghanistan (UNAMA) recorded 624 civilian casualties due to the incidents caused by AIMs. The impact of AIM is highlighted in this report as by definition it comes under antipersonnel mine category.

The scale of mines and ERW problem in Afghanistan is in sight. During the 12th Meeting of States Parties, Afghanistan requested for an extension to its deadline for clearance of antipersonnel mine contamination from 2013 to March 2023. This was granted following the development of a ten-year work plan that would realize that goal as well as clearance of all known anti-vehicle mines and legacy ERW.

[2] AIM refers to Pressure Plate Improvised Explosive Devices (PPIED)

The Mine Action Programme of Afghanistan (MAPA) activities are regulated by the Directorate of Mine Action Coordination (DMAC) under the authority of the State Ministry of Disaster Management and Humanitarian Affairs, as national coordination authority, is the official in charge of leadership, oversight, reporting on and coordination of mine action activities in Afghanistan. The United Nations Mine Action Service (UNMAS) provide technical and advisory support to DMAC. DMAC also receives financial supports from the Bureau of Political – Military Affairs, Office of Weapons Removal and Abatement (PM/WRA) of the US Department of State through ITF.

Form A National implementation measures Director

Article 7.1 "Each State Party shall report to the Secretary-General ... on:

a) The national implementation measures referred to in Article 9."

Remark: In accordance with Article 9, "Each State Party shall take all appropriate legal, administrative and other measures, including the imposition of penal sanctions, to prevent and suppress any activity prohibited to a State Party under this Convention undertaken by persons or on territory under its jurisdiction or control".

State [Party]: **Afghanistan** reporting for time period from **1 January 2018** to **31 December 2018**

Measures	Supplementary information (e.g., effective date of implementation & text of legislation attached).
National implementation measures relative to the Article 9:	
Regulation on banning production, use, transportation and stockpiling of antipersonnel mines and Cluster Munitions: Almost five years back, DMAC had drafted a regulation as an instrument for the implementation of the Article 9 of the Anti-Personnel Mine Ban Convention and Convention on Cluster Munitions. This will supplement an existing law banning the use, acquisition, trading and stockpiling of weapons, ammunition and explosive items without the required legal license. This regulation relates specifically to the provisions of the Convention on Cluster Munitions and Ottawa Treaty. The regulation on the prohibition of production, Importation, transportation, export, preservation, using, and destruction of anti-personnel mines and cluster munitions was signed by H.E the President of the Islamic Republic of Afghanistan and was published as the annex no (1) of the Law on Firearms Ammunitions and Explosive Materials under the decree No (307) of the Supreme Office of the President of the Islamic Republic of Afghanistan, dated 05 Sep 2018.	

Form B **Stockpiled anti-personnel mines**

Article7.1 "Each State Party shall report to the Secretary-General... on:

b) The total of all stockpiled anti-personnel mines owned or possessed by it, or under its jurisdiction or control, to include a breakdown of the type, quantity and, if possible, lot numbers of each type of anti- personnel mine stockpiled."

Afghanistan has destroyed all stockpiled anti- personnel mines owned or possessed by the state in the period 2003 - 2007.

State [Party]: **Afghanistan** reporting for time period from 31st January 2018 t0 31st December 2018

1. Total of stockpiled anti-personnel mines

Type	Quantity	Lot# (if possible)	Supplementary information
			Already completed during 2003 to 2007
TOTAL			

2. Previously unknown stockpiles of anti-personnel mines discovered after the deadline shave passed. *(Action #15ofNairobi Action Plan)*

Type	Quantity	Lot# (if possible)	Supplementary information
PMN	16		The information on the left illustrates the stockpiled anti-personnel mines destroyed after deadline through ongoing operations by Weapon &Ammunition Disposal teams during 2018. This data is available in the database of the HALO Trust. See Annex I: "Mine Recognition Handbook" for detailed descriptions of the mines found in Afghanistan

Form C Location of mined areas

Article 7.1 "Each State Party shall report to the Secretary-General ... on:

c) To the extent possible, the location of all mined areas that contain, or are suspected to contain, anti- personnel mines under its jurisdiction or control, to include as much detail as possible regarding the type and quantity of each type of anti-personnel mine in each mined area and when they were emplaced."

State [Party]: **Afghanistan** reporting for time period from 1 **January 2018** to **31 December 2018**

This should be a snap shot of where we are at following the reporting period (i.e. 1 January 2019)

State / Province	Number of areas known to contain anti-personnel mines (CHAs)	Area known to contain anti-personnel mines (square meters)	Number of areas suspected to contain anti- personnel mines (SHAs)	Area suspected to contain anti-personnel mines (square meters)	Total area remaining to be addressed in the context of Article 5 obligations
Central	467	25,563,554	49	5,871,852	31,435,406
Eastern	100	7,033,558	7	2,535,350	9,568,908
North	235	11,328,883	10	2,446,660	13,775,543
North-Eastern	660	43,784,466	29	11,912,702	55,697,168
South	116	20,794,408	83	33,032,259	53,826,667
South East	137	10,763,889	50	7,498,419	18,262,308
West	15	2,362,615	45	25,319,308	27,681,923
Total	**1,730**	**121,631,373**	**273**	**88,616,550**	**210,247,923**

Detail list of remaining mined areas containing Anti-Personnel (AP) mines are attached to this report as annex II.

1. In addition to the stated AP hazards in the above table, there are the following other contaminated recorded hazards still exist which need to be released:
    a. 1,184 recorded Anti- Vehicle (AV) hazards covering 303,943,984 sq. m area
    b. 296 recorded ERW hazards covering 149,744,044 sq. m area
    c. 235 recorded Initially Hazard Area (IHA) covering approx. 464,758,857 sq. m that mostly contaminated with AIM, ERW and AV which require proper NTS to be changed to either CHA, SHA or may be cancelled.
2. Continual armed conflicts from 1979 to present resulted in Afghanistan becoming heavily contaminated by landmines and ERW.
3. Ongoing armed conflicts since October 2001 by NATO/ISAF and government military forces against Anti Government Elements (AGE) leaves behind ERWs while the insurgents use AIMs as well, from which few of these contaminations have been recorded. DMAC- is advocating this issue with military arena to get the required information on the exact locations where kinetic military engagement have occurred in order to conduct further NTS and find the scope of problem. Fortunately, the Resolute Support (RS) has recently provided DMAC with access to the general database of kinetic engagement areas throughout the country under the name of PIX, access to the said global database and the website will enable DMAC and the MAPA to easily find the kinetic sites and scope of the new contamination by conducting new NTS.
4. In addition to the contamination described above, one recent challenge has been contamination surrounding International Security Assistance Force (ISAF) and North Atlantic Treaty Organization (NATO) firing ranges and bases. From 2010 to the end of December 2018, DMAC recorded 222 casualties resulting from ERW accidents in or around these firing ranges.

109 firing ranges covering 1,209.2 sq. km area have been surveyed so far. Based on Afghanistan Mine Action National Database, 68 ranges have been cleared/closed, while 17 other ranges are worked on, but clearance operations of these 17 FRs are currently stopped/ postponed due to funding shortage. A total of 873.8 sq. km area has been surface cleared & 539.1 sq. Km Have been released (subsurface cleared + reduced) so far; 262 AP mine, 53 AV mines, 155,447 items of ERW and 76,785 small arms ammunitions have been found and destroyed (from start to end of December 2018).

Form DAPMs retained or transferred

Article 7.1"Each State Party shall report to the Secretary-General ... on:

d) The types, quantities and, if possible, lot numbers of all anti-personnel mines retained or transferred for the development of and training in mine detection, mine clearance or mine destruction techniques, or transferred for the purpose of destruction, as well as the institutions authorized by a State Party to retain or transfer anti- personnel mines, in accordance with Article 3"

State [Party]: **Afghanistan** reporting for time period from 1 **January 2018** to **31 December 2018**

1a. ***Compulsory:*** Retained for development of and training in (*Article3, para.1*) OPS

Institution authorized by State Party	Type	Quantity	Lot# (if possible)	Supplementary information
MAPA	PMN	563		Afghanistan has not retained any live mines for its training in mine detection, mine clearance or mine destruction techniques. Not applicable in Afghanistan				
TOTAL	----------			

Form E **Status of programs for conversion or de-commissioning of APM production facilities**

Article 7.1 "Each State Party shall report to the Secretary-General ... on:

e) The status of programs for the conversion or de-commissioning of anti-personnel mine production facilities."

State [Party]: **Afghanistan** reporting for time period from 1 **January 2018** to **31 December 2018**

Indicate if to "convert" or "decommission"	Status (indicate if “in process” or "completed")	Supplementary information
Not applicable. Afghanistan does not produce AP mines		

Form F Status of programs for destruction of APMs

Article 7.1 "Each State Party shall report to the Secretary-General ... on:

f) The status of programs for the destruction of anti-personnel mines in accordance with Articles 4 and 5, including details of the methods which will be used in destruction, the location of all destruction sites and the applicable safety and environmental standards to be observed."

State [Party]: **Afghanistan** reporting for time period from 1 **January 2018** to **31 December 2018**

1. Status of programs for destruction of stockpiled APMs (*Article4*)

Description of the status of programs including:	Details of:
Location of destruction sites	
	Methods
	Applicable safety standards
Afghanistan has already destroyed all its anti-personnel stockpiles during 2003 to 2007	Applicable environmental standards

2. Status of programs for destruction of APMs in mined areas (*Article 5*)

This table should provide information on what were our accomplishments in 2018; the last two columns should sum up the information in Form C above.

Region	Number of areas known or suspected to contain anti-personnel mines at the beginning of the Reporting Period	Total area known or suspected to contain anti-personnel mines at the beginning of the reporting period	Amount of area cleared during the reporting period (square meters) Progress Area/Actual Area	Amount of area reduced durin g the reportin g period (square meters)	Amount of area cancelled during the reporting period (square meters)	Total area addressed in the context of Article 5 obligations during the reporting period (square meters)	Numbe r of areas remaining to be addressed in the context of Article 5 obligations (i.e., at the end of the reporting period)	Total area remainin g to be addressed in the context of Article 5 obligations (i.e., at the end of the reporting period)

These devices mentioned in above table have been destroyed during mined areas, battlefield clearance and EOD operations throughout Afghanistan in 2018

2.1 Application of Land Release Standards:

(Afghanistan should include information concerning its land release standards; Afghanistan could consider annexing its standards on land release or ensuring that this section states clearly the standards that are in place and that these standards in line with the most up-to-date and relevant IMAS)

Afghanistan Mine Action Standard (AMAS 05.01 Land Release, AMAS 05.02 for mine/ERW survey including non-technical and technical survey) were amended and updated in July 2013 right after the release of IMAS 07.11 for land release, 08.10 and 08.20 for non-technical and technical survey, all three AMAS were reviewed by AMAS Review Board and approved for application throughout the MAPA, the Standard Operating Procedure (SOP)s of all demining organizations have been revised based on the requirements of mentioned AMAS and approved by DMAC.

All three AMAS relating to land release operations are attached to this document as annex III

2.2 Implementation of plans in extension requests and decisions on requests

(This table should record how implementation is progressing in accordance with Afghanistan's plan within its extension request)

Year	No. of AP Hazards to be addressed according to the Plan within the Extension Request	AP Hazards to be addressed according to the Plan within the extension request (Sq. Km)	No. of AP Hazards addressed during the reporting period.	Area addressed through NTS/ cancellation in sq. m	Area addressed through TS/clearance (Actual Area Cleared & Reduced)
2013	483	24.0	1,042	7,915,023	34,856,066
2014	438	26.1	670	6,500,051	27,238,149
2015	523	24.9	471	2,004,214	19,206,453
2016	677	51.5	605	3,247,563	29,589,676
2017	666	69.3	496	1,686,377	29,852,453
2018	378	28.6	504	1,895,176	30,995,941
Total	3,165	224.3	3,788	23,248,404	171,738,738

We are normally reviewing the APMBT work plan once per year during July and August. The aim of this review is to update the APMBT projects in terms of hazards newly surveyed, cancelled, APMBT project priority considering geographical situation, impact level, device type and security situation. The number of hazards and size of contamination mentioned in above table are extracted from the system after review of the APMBT work plan in July 2018 which is different comparing to figures mentioned in previous year, due to resurvey of the hazards and changes in size. As Anti Vehicle and ERW also pose extreme risk to the civilian people and block development activities, based on recent years statistics almost 46 % of the civilian accidents are as result of ERW, therefore, in addition to clearance of AP contaminated areas the clearance of Anti Vehicle (AV) and ERW contaminated areas are also part of the extension request work plan.

There are 192 (88 active, 973 expired and 7 Transitional) recorded AIM hazards. Initially the AIM hazards were counted as AP hazards, but recently it was decided to consider the AIM hazards as standalone and for the current year reporting those hazards are excluded from the AP hazard list. The target and the implementation progress for the recent six years are shown in below table, which in addition to the plan (Target) and achievement, the size of area added as result of NTS conducted by IPs and size of area cancelled are also shown.

Years	Area in Sq. Km.				Remarks
	Target	Cleared + Reduced	Cancelled	Added	
2013	79.1	79	12.5	31.97	
2014	83.8	51.9	20	49.22	
2015	75.4	45.9	3.5	128.17	
2016	90.9	55.8	4.5	90.00	
2017	133	50.6	3.5	101.38	
2018	166	63.2	15.3	99.79	
Total	**628.2**	**346.4**	**59.3**	500.53	

The benchmark table in below shows progress of the 10 years extension request in implementation of the first six years: Benchmark Table as at end December 2018 for the Afghanistan Extension Request

Hazard type	Baseline April 2013(Note1)		Previously unreported hazards up to end December 2018		Resurvey results up to end of December 2018	Current Target as of end December 2018		Hazards Processed from April 2013 to end December 2018		Remaining Hazards as end of December 2018		Progress as at end December 2018 against current target

Reporting on decisions on Afghanistan's plan within its extension request

Afghanistan should use this section to report back on the decisions made on its request.

Changes or alterations to the proposed milestones in Extension request plan (AFGHANISTAN should use this section to highlight changes to their plan within their extension request. Along with the qualitative reasons for the changes in the plan, Afghanistan could use the table below to highlight the current status of its plan to address AP contamination.

Region		2019	2020	2021	2022	Total
Central	SHA/CHAs to be addressed	146	20	73	154	393

	Area to be cancelled					-

Note1: There are around 11 sq. km area under clearance operation with different progress percentage, therefore it is not included in the above table, while the table only shows intact (open) recorded AP hazards to be cleared during remaining years of the OTTAWA extension request work plan.

Note 2: The cancellation figure in the above table is not determined exactly as it depends to hazard situation, if during non-technical survey any hazard is found with no probability of mine/ERW anymore and is in use by locals then it would be cancelled

The hazard planning indicators and weight scoring have been reviewed by the MBT review committee consist of representatives from the demining IPs and DMAC, during the review some prominent improvements brought to the indicators. The main idea was to prioritize the hazards causing human accident, hazards close the residential, roads and other public areas. The number of hazard indicators were reduced from 14 to 13 comparing to the previous year, and become more consistent. Using the sum of scores for a specific hazard its impact level is determined which are categorized as very high impact, high impact, medium and low impact hazards. Determination of impact is an input for project design and then project prioritization for clearance. The below table shows detail of updated hazard indicators and its weight scoring:

S-No	Impact Indicators	Descriptions	Scoring Category				
			1 score	2 scores	3 scores	4 scores	5 scores
1	Detonation with human casualty	Any mine/ERW/AIM detonation linked to a known hazard which resulted human loss or casualty	1 score for detonation in community within recent two years	beyond 10 years back	between 4 to 10 years back	between 2 to 4 years back	within recent two years
2	Water blockage	Drinking water, irrigation systems					5 scores
3	Infrastructure blocked	Houses, Mosques, Education facilities, Health Centers, Public buildings, Markets, roads and bridges, powerlines etc.				4 scores	
4	Local authority/Communities request	The request be confirmed by related DMAC Regional Office		Community request	authority request		
5	Agriculture blocked	Crop land, fruit farms and forest			3 scores		
6	Small hazards (up to 5,000 sq. m)	To release communities, districts, provinces and or			3 scores		

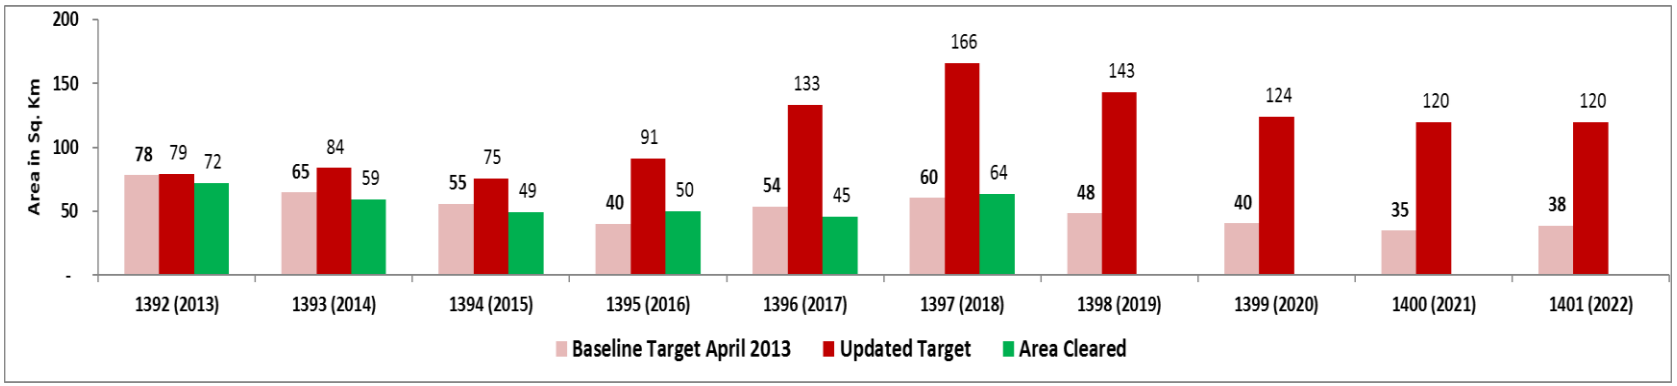
		change the map with recorded hazards.					
7	Anti-Personal (AP) Hazards	prevention of civilian casualties		Mountain top	Mountain sides		Flat Land
8	Hazards with ERW device	prevention of civilian casualties		Mountain top	Mountain sides		Flat Land
9	IDPs around hazards	If IDPs settled within 5 km buffer zone from the hazard				4 scores	
10	Grazing/pasture land blockage	Grazing/pasture land	1 score				
11	No. of affected families (200 family factor)	If hazard is affecting 200 families or more	1-100 families	101-200 families	201-300 families	301 and above	
12	Contaminated area size in the community 200,000 sqm or above.	If contaminated land within a community is 200,000 sqm or above, create more tension to the residents	1 score				
13	Distance from health center	for hazards located in more than 10 km distance from health centers		2 scores			

The average productivity rates used in calculation purpose in annex 24 of the request was reviewed and based on the IPs different assets/team's recent year achievement, comparing to the recent year (2016) the monthly average productivity rates have been updated with consultation of related demining IPs. The below table reflects changes of monthly average productivity rates comparing to recent year:

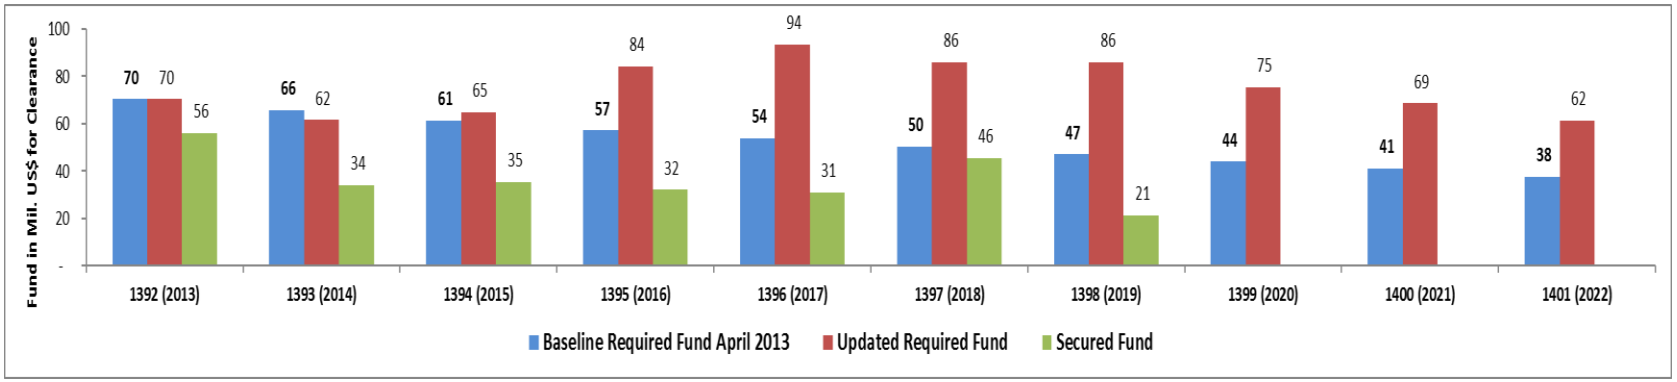
Hazard Device Type	Team Type	Area in sq. m per month			% tolerance	Remarks
		Agreed Average Productivity for 1397	Maximum Achieved in 1396	Minimum Achieved in 1396		
a	b	c	d	e	f	g
AP	DT	13,000	27,875	4,589	+ - 50%	10-Lane DT
	MDS	17,000	35,000	16,977	+ - 50%	Verification

	MDU	25,000	28,708	8,593	+ - 50%	preparation, Clearance
AP+AV	DT	13,000	17,589	10,447	+ - 50%	10-Lane DT
	MDU	10,000				preparation, verification
AV	DT	22,000	43,898	2,261	+ - 50%	10-Lane DT
	MDU+DT	50,000	181,388	15,512	+ - 50%	Ripper + follow up by DT
AV New methodology	MDU	90,000			+ - 50%	2MDU + 5 Deminers
ERW	DT	150,000	179,386	52,267	+ - 50%	10-Lane DT sub-surface method
	MDU	20,000	17,895	14,300	+ - 50%	preparation
ERW specific to Balkh (Hairatan, 37 sq. km)	2MDU	25,000			+ - 50%	2 machines with few deminers

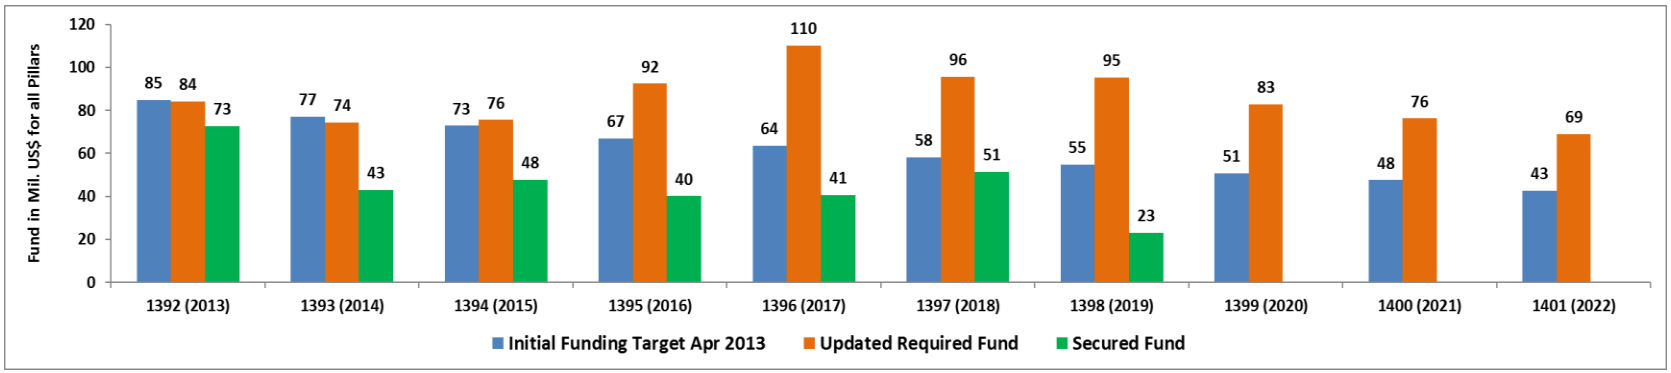
The average productivity rate per month per team and the cost per month per team for different teams are the main factors for cost calculation of the MBT projects. Based on MBT work plan review conducted during July-September 2018 some changes occurred in the target for the remaining 4 years which is due to piling up of remaining targeted area from last year's not achieved due to being under funded, and addition of newly surveyed areas left from legacy or post 2001 contamination. The below graph shows the initial target, updated target and achievement since implementation of the 10 years MBT work plan and the target to be cleared for the remaining 4 years which includes all recorded AP, AV, ERW and AIM hazards excluding firing ranges:



Likewise, the below graph shows the funding status for demining operation in terms of initial required fund, updated required fund and secured fund for the 10 years MBT extension work plan:



And the below graph is the status of overall funding required for demining operations, survey, mine/ERW RE, program management (coordination), victim assistance and advocacy in $ millions:



Due to funding shortfall no MEIFCS project/s was implemented in 2018. But, following is the overall MEIFCS achievements since start to end of Mar2016:

Since implementation of the extension request started in April 2013 till end of Mar2016 Mine/ERW Impact Free Community Survey (MEIFCS) conducted in 290 districts covering 23,085 communities from which 1,314 communities were already impacted and 21,771 communities were unknown impacted, besides,30,590 communities were surveyed out of the gazetteer in the planned districts. As a result of the non-technical survey conducted by MEIFCS project teams from start to end of Mar 2016 a total area of 190 sq.km (155 sq. km MF area & 35 sq.km ERW area) newly recorded which left from old contamination and 21 sq. km (1sq. km AIM area and 20 sq. km ERW area) newly recorded as post 2001 contamination. On the other hand, 469 hazards covering 39 sq.km AP, AV & ERW are already recorded hazards were cancelled.

Non-technical Survey (NTS) plays a critical role in mine action land release process and is a key function for follow up of mine action interventions (technical survey and clearance). This is the process of collecting information about hazardous area. A part from the MEIFCS,

a NTS Project was implemented in 13 provinces covering 20 districts in 2018 using funds contributed by PM-WRA. The initial information indicated that over 51 - 500 military Operations happened in these districts. The primary focus of the NTS was to capture the possible contaminated areas as a result of Kinetic operations in these districts. There was no exact information to show in which villages the Kinetic operations happened therefore, the NTS teams were needed to visit each individual gazetteer communities of the planned districts plus other communities not mentioned in national gazetteer. During the survey, NTS teams identified total **4,765** communities (**1,795** were from gazetteer and **2,970** were out of gazetteer).

Challenges and needs of the program in survey and clearance field:

Challe	Mitigating Factors
Funding	
The shortfall in funding poses a threat to the achievement of the targets set for 2018 and if it continuous the remaining 4 years will also be seriously affected and the MBT work plan may not be fully achieved on its milestone	To accelerate fund raising efforts, increase donor meetings, workshops, and advocacy; bring new donors on board, and work with government to include mine action on a budget funding channel.
Security	
Fluctuations in the security situation pose a further challenge and could disrupt operations.	MAPA is working to enhance community liaison to educate communities about the importance and impartiality of the programme, conduct refresh visits of the targeted areas to be cleared during the year and make sure, the validity and accessibility of the contaminated areas for further planning. The aim of the program is to expand mine action services to reach to hard to access areas where people need this service as high priority.
Survey	
Below are three main challenges and risk factors for survey: • Security • Increased number of outside the gazetteer villages • Funding	• Strong community liaison and close contact with influential people and the community elders, community shuras, etc. in the relevant locations will help with security restrictions for the survey teams. • Recalculation of the anticipated number of outside the gazetteer villages in the plan based on previous experience of the surveyed districts. • Increase efforts on fundraising for survey.
Clearance	

For the implementation stage of the clearance operations, the only challenge is insecurity.	The demining teams should keep and maintain close liaison with the community elders and influential people of the communities.

Form G APMs destroyed after entry into force

Article 7.1 "Each State Party shall report to the Secretary-General ... on:

g) The types and quantities of all anti-personnel mines destroyed after the entry into force of this Convention for that State Party, to include a breakdown of the quantity of each type of anti-personnel mine destroyed, in accordance with Articles 4 and 5, respectively, along with, if possible, the lot numbers of each type anti- personnel mine in the case of destruction in accordance with Article 4"

State [Party]: **Afghanistan** reporting for time period from 1 **st Jan 2018** to **31st Dec 2018**

Form I Measures to provide warning to the population

Article 7.1 "Each State Party shall report to the Secretary-General ... on:

I) The measures taken to provide an immediate and effective warning to the population in relation to all areas identified under paragraph 2 of Article 5."

State [Party]: **Afghanistan** reporting for time period from 1 **st Jan 2018** to **31st Dec 2018**

[Narrative:]

As of 31st December 2018, in Afghanistan, there are approximately 1,506 communities affected by 3,795 hazards with an area of 1,781 sq. km (including Firing Range and Initial Hazard Area) contaminated by landmines ERWs and VOIED. These impacted communities are spread out across 253 districts of 33 out of the 34 provinces of the country, which affect an estimated number of 2.4 million people. Meanwhile, other significant challenges include the ongoing kinetic engagements since 2001, which have left behind many ERWs and homemade mines, posing an additional significant threat to the civilians.

During 2018, Landmine and ERW Risk Education activities were coordinated, implemented and monitored in light of the National Mine Action Strategic Plan, Yearly Operational Plan, Afghanistan Mine Action Standard (AMAS), and as per the set criteria for community prioritization. Main at risk groups included, communities living in proximity of hazards, returnees, IDPs, nomads, scrap metal collectors, aid workers and people on the move (travelers). Among all, children have been known to be the most venerable to the threat of landmines and ERWs. DMAC and its implementing partners (IPs) are making efforts to mitigate the threat that the landmine and ERW contaminations pose to the lives and livelihoods of Afghan civilians.

During 2018, there were 10 Risk Education accredited National and International IPs, including, ATC, HALO Trust, MDC, AAR Japan, OMAR, DDG, JGO, and AREA, that were actively engaged in the delivery of Risk Education sessions. There were a total number of 40 couple teams (male & female) delivering Risk Education activities. Deployment of couple teams is believed to be an effective way to enable access to at risk population from both genders and all age groups.

During the reporting period, Risk Education was provided to different at-risk groups through a number of below mentioned various adapted approaches and initiatives, in order to raise the level of awareness and promote safe behaviors of the most at-risk population regarding threat affiliated with the landmines and ERW contaminations.

- Provision of direct Risk Education sessions to people living in landmine and ERW impacted communities.
- Provision of Risk Education through media outreach, which is believed to be effective communication channel to reach vulnerable communities in remote and hard to reach areas.

- Provision of Risk Education for returnees through United Nations High Commissioners for Refugees (UNHCR) and International Organization for Migration (IOM) Encashment/ transit centers and zero points
- Provision of Risk Education for IDPs and host communities.
- Landmine Safety Program (LSP) for aid workers.
- Updated monitoring MRE checklist for gender mainstreaming.
- Updated guideline for the review and development of MRE EC materials.
- UNMAS in collaboration with its local partner (DDG) supported the conducting of a one-day MRE workshop under DMAC's leadership. The workshop was aiming to highlight and discuss RE material, means for delivery of massages and methodology and for an inclusive method for the children (children's flip chart).
- The workshop has been conducted on MRE new flip chart for children (story pictures).
- ToT trainings were conducted for 153 Mine/ ERW Risk Education trainers of the accredited Risk IPs and organizations who implement MRE in the non-formal (indirect) approach, as a complementary action beside other activity.
- Landmine Safety Program has been conducted for 223 operations staff of UNODC, AWAAZ and MoE schools' teachers for their safe operations in field.
- As part of MoUs implementation with Ministry of Information Cultural, the DMAC- MRE department had meetings and finally it was accepted by the mentioned ministry to print the MRE massages in their national newspapers such as Aniss, Hewad and Esllah.
- For wider coverage and targeting many papulations, a number of local TVs become ready to disseminate the MRE- Video clips via their TV stations such as Education TV and Youth. This advocacy will continue to encourage more TV stations do support us in broadcasting MRE clips with risk education massages.
- During conducting RE- sessions, the following materials have been distributed:
    - 39,600 green brochures; 130,850 notebooks with MRE Massages; 254,250 way to home brochures; 40 teacher bags; 3,125 pens with Risk Education messages; 144,250 MAPA hotline cards and 95 Trainers' Kits,

Below tables elaborate on the number of Risk Education beneficiaries, by status of audience, and by gender and age group.
Beneficiaries that received landmine/ ERW Risk Education for the first time (New audience)

Audience Type	Women	Men	Girls	Boys	Total
Community Member	84,122	89,503	132,184	177,657	483,466

Student	61	57	283	313	714
Total	**17,640**	**23,714**	**37,375**	**54,987**	**133,716**

Challenges and needs of the program in mine/ERW RE field:

<table>
<tr><th colspan="2">Challenges</th><th>Mitigating factors</th></tr>
<tr><td colspan="3">Mine/ERW Risk Education</td></tr>
<tr><td>I.</td><td>High relevance but uncertain impact on practices;</td><td rowspan="2">New Initiative in MRE approaches is going to be introduced such as:
MRE through TVs
MRE through Awaaz Afghanistan
MRE through radio</td></tr>
<tr><td>II.</td><td>Traditional CB-MRE, MRE through schools and direct MRE with old method and materials;</td></tr>
<tr><td>III.</td><td>Risk Education rather than Risky behavior change;</td><td rowspan="2">MRE delivery procedure will be changed and further developed
To Develop MRE communication strategy by 2019
Working on method for risky behavior change more to hear from participants;
Three or more sessions for one target group for changing their behavior
Standardize the non-formal MRE</td></tr>
<tr><td>IV.</td><td>Lack of AIM (PPIED) – Risk Education clear method;</td></tr>
</table>

V.	The impact of MRE is difficult to measure because risk behaviors are not a onetime output;	**Causalities Data Collection** • An MRE organization will be contracted to provide MRE as well as collect data from health clinics, • To make further work with COMAC
VI.	Lack of training kits (posters, leaflets, plastic models) or deteriorated training kits make it more difficult for teachers to explain some of the RE messages properly to children about AIM;	**Reviewing MRE Materials** • Work on AIM – Risk Education materials by 2019 (change the materials from real pictures of mine/ERW/AIM to story picture) • Speaking books initiative • New Clips for M/ERW/AIM RE
VII.	Turnover within the teaching staff and absence of refresher training meant that high proportions of the teachers who had received the training could have left the school or even changed job	To work on coordination mechanism with MoE to have update information from trained teachers in the system.

Form J Other relevant matters

Remark: States Parties may use this form to report voluntarily on other relevant matters, including matters pertaining to compliance and implementation not covered by the formal reporting requirements contained in Article 7. States Parties are encouraged to use this form to report on activities undertaken with respect to Article 6, and in particular to report on assistance provided for the care and rehabilitation, and social and economic reintegration, of mine victims.

State [Party]: **Afghanistan** reporting for time period from 1 **st Jan 2018** to **31st Dec 2018**

Narrative / reference to other reports:]

MAPA has conducted the following national, regional and international cooperation and events during 2017/1396:

OPS R&D Department conducted the following main activities during 2018:

- The Abandoned Improvised Mine (AIM) Policy was developed by DMAC-OPS R&D department, in coordination and consultation of the Mine Action Programme of Afghanistan (MAPA) humanitarian demining organizations. The policy directs the engagement of the MAPA for dealing with the challenge of confirmed or suspected AIM contaminated areas in Afghanistan. This policy guides the conduct of Abandoned Improvised Mine (AIM) demining activities of the MAPA in order to ensure that AIM contaminated areas are cleared safely, effectively, and efficiently. This policy also intends to prevent the MAPA and IPs from compromising their neutrality and impartiality by ensuring that all AIM demining activity is conducted solely for humanitarian purposes.

- OPS R&D department along with the related IPs (AREA, DAFA, HALO Trust, MDC & MCPA) conducted the new trial on Front End Loader (FEL) machines productivity rate in Kandahar (08-11 May 2018). The finding of the trial was very good, at result the productivity from 45,000 sq. m/month increased to 90,000 sq. m/month.

- The Mine Action Livelihoods Survey for 2018 was conducted by DMAC, in 12 communities located 5 districts of Khost province. The findings of the survey indicate that mine action activities had many significant impacts on the visited communities. As a result of mine action activities; lands were cleared for growing corps, grazing of animals, building resident houses and other public facilities. It was also found that, most of the community people (male/female from different ages) were aware of the mine/ERW risks and a number of mine/ERW victims were provided with physical rehabilitation services by the service providers within Khost province.

- The Post Demining Impact Assessment (PDIA) for 2018 was conducted by DMAC on 56 cleared hazardous areas in 36 communities, across 26 districts from 10 provinces of Afghanistan. The PDIA findings demonstrate that mine action operations and services provided safe access of the locals and also paved the way for implementation of development and infrastructure projects in all the cleared areas and communities. Approximately 90 percent of the cleared lands used by the communities for agricultural, housing, animal grazing and other socio-economic activities, that indicates that mine action activities have brought many positive changes in the lives of communities and 97% of beneficiaries interviewed in the targeted communities, showed their satisfaction from the mine action activities.

- The Operation Assistant from OPS R&D department attended the EOD level 1,2, 3 training in Tajikistan. While OPS R&D Associate was invited as Co-instructor for this training who attended this training last year. The Organization for Security Cooperation in Europe (OSCE) fully sponsored them. The training was delivered by US army and the ministry of defense of Tajikistan. Both of the associates successfully completed the training and got their certificates.

- OPS R&D department developed the policy highlighting the commercial companies' activities within the programme and shared with DMAC director for approval. At the mean time meeting was conducted with all commercial companies and the points covered in the policy were presented to them. The policy will soon be finalized and shared with all commercial companies.

Work Plan for Legacy Contamination sent to Office of the National Security Council:

Following a presentation by DMAC director at the National Security Council (Supreme Commander in Chief of the Armed Forces) meeting chaired by H.E. The President, the National Security Council (NSC) requested DMAC to provide a detailed work plan for the clearance of remaining legacy contamination. DMAC has provided the work plan to the Office of the NSC in 22 pages with the following details;

- The history of landmine/ERW contamination in the country.
- MAPA achievement so far
- The current scale of mine/ERW problem and the remaining challenges
- Information management, quality management, financial management, risk management and land release processes
- Planning and priority setting in mine action
- The management process and 10 years extension work plan and its progress so far

In the work plan it was also noted that the successful implementation of the work plan will depend on the availability of funds and that the programme needs USD 343 million to clear the remaining 535 sq. Kms of legacy contamination. The programme was underfunded over the last five years which led to a backlog of contamination adding to an already piled-up work.

Celebration of International Women's Day:

The Mine Action Programme of Afghanistan (MAPA) celebrated International Women's Day on 7th March 2018 at Safi Landmark Hotel in Kabul. Celebration was accompanied by women's products show, MRE role play focusing on the role of women in mine action, live music, poetry,

modeling show, cash assistance to families of deminers who had lost their lives and limbs during mine clearance operations in the previous year and appreciation of gender mainstreaming champions in the mine action family. Celebration was attended by senior government officials, representatives of UN agencies, embassies, civil society, women empowerment organizations and other MAPA stakeholders and partners.

MAPA's intervention on TAPI project:

As a precursor to development projects, mine action has facilitated the implementation of numerous development projects in the country. In February this year the Turkmenistan–Afghanistan–Pakistan–India Pipeline (TAPI), also known as Trans-Afghanistan Pipeline which is a natural gas pipeline being transported from Turkmenistan through Afghanistan into Pakistan and then to India was inaugurated in a ground-breaking ceremony in Herat province. In 2017 MDC, a MAPA implementing partner carried out a technical survey of mine/ERW contamination in support of the TAPI project. DMAC as governmental mine action organization will conduct Quality Control and Quality Assurance of the project to ensure that mine action operation is carried out in line with the national mine action standards, work plan and client requirements.

MIS Department mission to TURMAC:

DMAC is privileged to have a rich and comprehensive Management Information System (MIS) section. Information Management System for Mi ne Action (IMSMA) is a tool used for planning and priority setting as well as for restoring various types of mine action related data. Mohamma d Ashraf Safi MIS head of DMAC was invited to Ankara by UNDP Turkey to conduct an information support training for the Turkish Mine Action Centre (TURMAC) staff. The mission was for 4 weeks, starting from 21 January to 17 February 2018 travel inclusive.

Objectives of the mission:

- Review IMSMA installation, country structure and data recording and collection processes, and to advise and provide on-the-job training to improve them
- Prepare for and conduct an IMSMA users training course in the context of mine action in Turkey

Outcomes of the mission:

- Information Management standard operating procedure was reviewed and finalized
- IMSMA Administration training for 14 TURMAC staff members from MIS, Mine Risk education (MRE), Quality Management (Q M) & Operations departments
- Migration of 3,843 Hazards & around 60,000 location information.

Technical Support to Sudan National Mine Action Centre (NMAC) through UNMAS Sudan:

As part of south-south cooperation which is an obligation for states parties to share their experience in mine action in accordance with article six of the Anti-personnel Mine Ban Convention and Convention on Cluster Munitions, Dr. Aimal Safi, Chief of Quality Management from UNMAS Afghanistan visited NMAC Sudan in late February this year to support the Sudanese organization in establishing an effective Quality Management system. This two-week long visit was based on an earlier visit made by NMAC Management Team of the MAPA in May 2017. The MAPA also has continued cooperation with other mine-affected countries such as, Tajikistan, Turkey and Colombia.

Purpose of the Mission to Sudan:

The mission was planned to review the current working processes of NMAC departments and their functional sections, identify areas for improvement, revise and update the processes. to establish Quality Management Systems based on International Organization for Standardization (ISO) 9001:2015 and IMAS 07.12. Through the above measures, a more sustainable delivery of high quality mine action services to the mine action customers and stakeholders could be ensured.

Training Workshop on "Quality Management System in Mine Action" for the Provincial Directorates of ANDMA:

A training workshop on Quality Management System in Mine Action for the provincial directorates of the Afghanistan National Disaster Management Authority (ANDMA) was organized from 10th to 15th March 2018, in the HALO Trust Compound, Kabul. The workshop was organized by the Directorate of Mine Action Coordination (DMAC) of the Afghanistan National Disaster Management Authority and was facilitated by the HALO Trust with financial support of Department for International Development (DFID)-UK. The opening of this workshop was attended by H.E Mohammad Aslam Sayas, Deputy Director General of ANDMA, DMAC, UNMAS and the HALO trust. The objective of this workshop was to enhance the capacity of the ANDMA provincial representatives so that they are able to support the mine action activities in their respective provinces and act on behalf of DMAC in overseeing and addressing specific field issues encountered by the mine action implementing partners.

MAPA CELEBRATES THE INTERNATIONAL DAY FOR MINE AWARENESS AND ASSISTANCE IN MINE ACTION:

On 3rd of April 2018, the Mine Action Programme of Afghanistan (MAPA) celebrated the International Day for Mine Awareness and Assistance in Mine Action in Kabul. The event was jointly celebrated by the Directorate of Mine Action Coordination (DMAC) and the United Nations Mine Action Service (UNMAS) and brought together key authorities from the Government, donor- embassies in Afghanistan, the MAPA IPs and the media. The event was organized at the Marble Palace and was attended by H.E. Dr. Abdullah Abdullah, Chief Executive of the National Unity Government. In his speech, Dr. Abdullah highlighted the importance of mine action as a priority for the Government and called on all the donors to continue supporting MAPA and the Afghan Government in eliminating the threat of landmines and other explosive remnants of war from the country.

WORKING TO CLEAR WAY FOR TAPI GAS PIPELINE:

To mark the start of work on the Afghan part of the international gas pipeline known as TAPI (Turkmenistan, Afghanistan, Pakistan, India), representatives from all the four countries gathered in Herat in February this year. The Managing Board of this national infrastructure project sensibly allocated a budget for demining activities of the project. Following the completion of the Non-Technical Survey (NTS) of TAPI by MDC, the Technical Survey (TS) of the project was awarded to Aims Demining Company (AMDC) and Mine Detection Center (MDC) in March 2018 and was completed in June 22018.In line with its mandate, DMAC conducted Quality Assurance and Quality Control (QA/QC) of the technical survey by recruiting eleven (11) Quality Management Specialists for a period of three months.

The salaries of these Quality Management Specialists were funded primary contractor of TAPI, Vinco-Imtiaz Construction Company (VICC). It is highly likely that the Coordination Office of TAPI will widen the pipelines corridor which will likely lead to a technical survey of the expanded area followed by clearance. In recognition of the importance of the view of mine action as a precursor to development, TAPI Board's consideration of mine action interventions represents the epitome of this understanding in practice.

TRANSITION TO NATIONAL OWNERSHIP AND CAPACITY TRANSFER OF UNMAS TO DMAC COMES TO A SUCCESSFUL END:

In line with the capacity transfer plan which was jointly developed by DMAC and UNMAS, on 1st June, 2018, UNMAS transferred the remaining key positions of mostly department-heads to DMAC. The practical steps for the implementation of this plan began in November 2016 and DMAC with technical support from UNMAS, is now officially managing and-leading the Mine Action Programme of Afghanistan.

QUALITY MANAGEMENT INSPECTORS OF TNMAC GIVEN RE-FRESHER TRAINING ON QMS:

In an attempt to promote cross-border and south-south cooperation, the Tajikistan National Mine Action Center (TNMAC) has agreed to provide quality control and quality assurance of FSD projects in Darwaz district of Badakhshan. The projects implemented by FSD are better accessed through Tajikistan due to rugged terrain. TNMAC has assigned two of its DMAC-trained quality management officers to conduct QC and QA of the projects on behalf on DMAC. In April this year, DMAC QMS department convened a four-day long training session for TNMAC quality management officers to prepare them for the job and to improve their technical knowledge and skills.

DMAC HOSTS A DISCUSSION ON HOW MAPA IPS CAN POTENTIALLY ACT AS FIRST RESPONDERS TO NATURAL DISASTERS:

On 2nd June, 2018, H.E. Mr. Mohammad Qasim HaidariDeputy Minister for Policy, Coordination and Planning of the State Ministry for Disaster Management and Humanitarian Affairs chaired a meeting on how mine action implementing partners can voluntarily get involved in helping to respond to victims of natural disasters in areas where they have presence. The meeting was facilitated by the Directorate of Mine Action Coor dination (DMAC) and was attended by the representatives of key mine action implementing partners of the MAPA.

REPRESENTATION AT THE INTERSESSIONAL MEETING OF AP-MBT:

At the Intersessional Meeting of the Antipersonnel Mine Ban Convention, held in Geneva, in June this year, Afghanistan was represented by Mr. Mohammad Shafiq Yosufi, DMAC Director. Mr. Yosufi sat in the panel of speakers in two side events- - respectively titled as "Abandoned Improvised Mines in Afghanistan: Gaining Access and Consent" chaired by Netherlands and "Achieving National Ownership: The Afghanistan Case". DMAC Director also delivered Afghanistan's statements on "Clearance", "Cooperation and Assistance" and Victim Assistance.

AFGHANISTAN DONOR AND IPs COORDINATION WORKSHOP HELD IN GENEVA:

The Afghanistan Donor and IPs Coordination workshop for mine action was held in Geneva on 9-11 April 2018. The workshop, organized by DMAC with technical facilitation of the Geneva International Centre for Humanitarian Demining (GICHD, was financially supported by the United States, Department of State, Office of Weapons Removal and Abatement (US PM/WRA). The workshop which brought together MAPA donors

and IPs under the same roof to discuss the achievements and challenges of the programme, was the fourth of its kind organized for the second time in Geneva preceded by annual workshops organized successively in Dubai and Dushanbe.

PARTICIPATION AT THE MEETING OF EXPERTS ON CCW:

Mr. Mohammad Shafiq Yosufi, DMAC Director took part in the Meeting of Experts for the Amended Protocol II and Protocol V of the Convention on Certain Conventional Weapons (CCW), on 11-13 June 2018, in Geneva. In this meeting DMAC Director sat in two side events and one plenary session and spoke on the following topics;

- Status of ERW in Afghanistan
- Status of Pressure Plate IEDs in Afghanistan
- Assistance provided to victims of IEDs in Afghanistan.

REGIONAL EOD TRAINING COURSE IN TAJIKISTAN:

The Organization for Security and Cooperation in Europe (OSCE) organized a regional Explosive Ordnance Disposal (EOD) training in partnership with the U.S. ARCENT as the focal training partner hosted by the Tajik Ministry of Defense to develop competencies of trainees from military, law enforcement and security services as well as civilian agencies, to the specific requirements of IMAS. The participants of the training were nationals of four regional countries (Afghanistan, Tajikistan, Uzbekistan and Kazakhstan). A total of 9 Afghan participants took part in the training, 7 of which were from DMAC and two from the Ministry of interior. Of the 7 DMAC participants, 5 were trainees and the-remaining 2 were co-instructors who had passed this training in 2017.

DMAC PUBLISHES ITS POLICY ON 'EXTERNAL QUALITY MANAGEMENT OF DEMINING ACTIVITIES IN SUPPORT OF DEVELOPMENT:

The Directorate of Mine Action Coordination (DMAC) of the State Ministry for Disaster Management and Humanitarian Affairs introduced its Policy on 'External Quality Management of Demining Activities in Support of Development Projects' on 7th May, 2018. This policy aims to ensure the delivery of high-quality demining services undertaken in support of development interventions through the private sector in Afghanistan.

This policy details the importance of external Quality Assurance (QA) and Quality Control (QC) of demining activities, operations and outputs to ensure that the quality requirements are met and that the confidence of stakeholders, funding bodies, development investors and the Government of Islamic Republic of Afghanistan (GoIRA) is built.

MAPA DEVELOPS ITS POLICY ON CLEARANCE OF ABANDONED IMPROVISED MINES (AIM):

DMAC in consultation with the MAPA developed a policy on clearance of Abandoned Improvised Mines (AIM). This policy directs the engagement of the MAPA to deal with the increasing challenge of confirmed and suspected AIM contamination in the country. Figures suggest that a significant percentage of civilian casualties in Afghanistan are caused by improvised mines also known pressure plate IEDs. The policy will also help IPs to safely clear abandoned improvised mines while taking-into account the efficiency of the clearance operations. The paper aims to

ensure that MAPA IPs uphold their neutrality and impartiality as they rid the country of explosive materials in order to save to lives and limbs of civilians.

ACBL MEETS TO SELECT A NEW STEERING COMMITTEE:

The Afghan Campaign to Ban Landmines (ACBL), which is a nongovernmental and nonpolitical forum, was established on 5th Aug 1995 in Kabul aiming for a total ban on landmines. Through a meeting organized by the Victim Assistance department of DMAC, a new steering committee was elected in order to reactivate the ACBL as an effective forum where it can advocate and campaign for:

- The removal the new obstacles faced the programme due to a deteriorating security situation and the increasing risks faced by operators in the field
- A ban of new contamination and expansion of hazardous area due to production and use of PPIEDs and ERW
- To highlight funding shortage to achieve a mine-free Afghanistan by 2023
- To fulfill the requirements of CRPD for the inclusion of mine/ERW victims in society

The meeting was opened by a statement from Mohammad Shohab Hakimi, MDC Director and H.E. Najeeb Aqa Fahim, State Minister for Disaster Management and- Humanitarian Affairs. Through votes, the following seven people were elected as a new steering committee for ACBL for the next two year:

1. Mr. Shahab Hakimi, MDC
2. Mr. Omar Khan Muneeb, DAO
3. Mr. Abdul Khaliq Zazai, AOAD
4. Mr. Haji Ahmad Shah, CCD
5. Mr. Samiulhaq Sami, HI
6. Mr. Muniruddin Burhani – AABRAR
7. Mr. Ali Akbar Jafari, H4AH

THE INTERNATIONAL DAY OF PEACE (PEACE DAY) OBSERVED IN AFGHANISTAN BY THE MAPA:

The MAPA family celebrated the International Day of Peace under the theme " The Right to Peace – The Universal Declaration of Human Rights at 70" on 23 September 2018, at the MDC compound. The event was participated by H.E. Najib Aqa Fahim, State Minister for Disaster Management and Humanitarian Affairs, Government Officials from key ministries, representatives from the Afghanistan Independent Human Rights Commission, UNMAS and MAPA implementing partners and stakeholders. In his remarks H.E. Minister Fahim highlighted the efforts made by the MAPA as steps towards peace and stabilization in the country. Minister Fahim stated that "peace does not mean the absence of war, rather it is presence in a civil society with social justice, mutual respect and mutual understanding." The event was well-broadcasted by the national media and TV stations. Tolo and Ariana televisions had live coverage of the event. Approximately 100 deminers from the main

implementing partners of the MAPA had a parade for peace within the MDC compound. The event aimed to mark the immense efforts of deminers over the past 29 years and to showcase the MAPA's contribution to peace and security in the country.

REPRESENTATION AT THE 13TH INTERNATIONAL CONFERENCE OF THE "BLED STRATEGIC FORUM (BSF)":

The 13th International Conference of the Bled Strategic Forum was held on 10 – 11 September 2018 in Slovenia. DMAC Director, Mr. Yosufi attended all the relevant discussions and side events of the forum and shared information on the mine action programme of Afghanistan with other participants in the forum. Mr. Yosufi was also part of a panel discussion on the second day of the forum under the title of "De-Victimising Victims" which was organized in partnership with ITF Enhancing Human Security. The panel discussed the possible ways donors can bridge the gap between victim assistance and other fields of humanitarian mine action, and also how mine victims can be empowered and re-integrated back in the community.

PM/WRA VISITS DMAC FOR PROGRAMME REVIEW:

PM/WRA Programme Manager for South and Central Asia, Mr. Geary Cox visited DMAC on 16th September 2018. Mr. Cox was accompanied by Mr. George DuSoe and Mr. Arash Popalzai from the US embassy in Kabul. During their visit, they were briefed by the DMAC with a summary of the key achievements of the programme over the past year. The PM/WRA team was also provided with information on key areas DMAC and MAPA need support. Mr. Geary advised DMAC to develop a concept note by outlining all the support the MAPA requires and present it to PM/WRA through their process of the unsolicited proposals. He further added that, the U.S. PM/WRA will review DMAC's concept note and will provide feedback on the possibility of support. On 19th of September 2018, U.S. PM/WRA hosted an evening reception at the US embassy in Kabul to praise the work of the MAPA in saving civilian lives and improving peoples' livelihoods in the country. H.E Najib Aqa Fahim - the State Minister for Disaster Management and Humanitarian Affairs, Officials from DMAC, UNMAS, MAPA donors and IPs were present in the reception which was hosted by Mr. Jim DeHart – Assistant Chief of Mission of the U.S. Embassy in Kabul.

RETREAT IN BAMYAN:

Following the successful completion of transition in June 2018, UNMAS organized a retreat for DMAC and UNMAS senior staff to evaluate where DMAC stands following the transfer of capacities from UNMAS. The retreat, which was held in Bamyan from 8th to 11th July 2018, was an opportunity for DMAC and UNMAS staff to reflect on transition and the way ahead. In light of the priorities set by DMAC, an action plan was developed in consultation with UNMAS with identified areas of focus for DMAC for the year ahead. As a follow up to the Bamyan Retreat, another meeting was hosted by UNMAS on 3rd September 2018 at UNOCA where DMAC and UNMAS agreed on mutual cooperation for the action points to be implemented as priority.

THE CABINET OF THE ISLAMIC REPUBLIC OF AFGHANISTAN ENDORSES ADDENDUM OF LAW ON THE IMPLEMENTATION OF AP-MBC AND CCM:

Since 2014, DMAC led a working group that developed a law as an instrument for the implementation of the Antipersonnel Mine Ban Convention and the Convention on Cluster Munitions. This will supplement an existing law banning the use, acquisition, trading and stockpiling of weapons, ammunition and explosive items without the required legal license. This law relates specifically to the provisions of the Ottawa Treaty and the

Convention on Cluster Munitions. This law has been approved as an addendum to the existing Law approved by the cabinet and endorsed by H.E. President through decree # 307 dated 14/6/1397 (5 Sep 2018). Processing of this law through the Ministry of Justice, however, took a long time and was challenging for DMAC. Finally, through DMAC's persistence, the law was endorsed by H.E. the President.

POST-CONFLICT EMERGENCY RESPONSE IN GHAZNI:

Following the clashes between the Afghan National Security and Defense Forces (ANDSF) and the Taliban in Ghazni in August this year, DMAC with support from the implementing partners; ATC, HALO trust and OMAR deployed quick response demining teams to the province. These quick response teams were one of the first humanitarian groups that arrived in the province as soon as the road to the province was opened. Heavy clashes between ANDSF and Taliban resulted in the death and injury of hundreds of civilians and several public and private facilities in the city were destroyed. When facilities in the city were destroyed. When the conflict was over, the city was left heavily contaminated with explosive remnants of war (ERWs) and explosive materials which prevented aid agencies from entering the city. The deployed quick response teams destroyed 103 different types of ERWs and provided Risk Education to 7691 people from different age and sex groups and enabled access of humanitarian aid organizations in the city.

POST DEMINING IMPACT ASSESSMENTS IN 1397:

Post-Demining Impact Assessment (PDIA) for 1397/2018 was carried out during July- September 2018. PDIA for 1397/2018 covered 73 cleared/cancelled hazards from the previous year. These hazards were randomly selected from 44 villages in 29 Districts of 11 provinces of the country. The selected hazards make 17% of the total cleared/cancelled land during 1396/2017. A detailed PDIA report for 1397/2018 is being developed and will be published during the upcoming reporting quarter.

LANDMINE AND LIVELIHOODS SURVEYS CARRIED OUT IN TWO REGIONS:

Mine Action Livelihood Survey (MALS) was carried out in September 2018 in 12 communities, of five districts of Khost Province in the southeast of the country. The initial findings of the survey indicate that mine action activities were indeed valuable to the communities that were surveyed. A detailed MALS report for 1397/2018 is being developed and will be published during the upcoming reporting quarter.

WORKSHOP ON THE REVIEW AND DEVELOPMENT OF DATABASE FOR VA/DISABILITY:

A workshop on National Disability Database development and review was jointly conducted by DMAC-VA department and the Martyrs and Disabled Division of the Ministry of Labor, Social Affairs, Martyrs and Disabled (MoLSAMD). The workshop was held to review and develop the national disability database as a main source of information about people with disabilities and their needs, causes of disability and services needed. This workshop was participated by H.E. Mohammad Aqa Kohistani, Deputy Minister of Martyrs and Disabled Affairs of MoLSAMD, Mr. Mohammad Shafiq Yosufi, DMAC Director and representatives from most of the VA and MRE organizations working in Afghanistan.

WORKSHOP ON "EMPLOYMENT IN MINE ACTION & THE ART OF JOB SEEKING":

The Gender Mainstreaming department of the Directorate of Mine Action Coordination (DMAC) in coordination with the Ministry of Women's Affairs, conducted a one-day workshop on "Employment in Mine Action & The Art of Job Seeking" on 29th August 2018. The workshop was attended by around 20 participants and was aimed at raising awareness on mine action, explaining the role of women in mine action as well as practical knowledge in job seeking.

AIM DEMINING POLICY DEVELOPED:

The Directorate of Mine Action Coordination (DMAC) of the Afghanistan National Disaster Management Authority (ANDMA) released its Policy on the clearance of Abandoned Improvised Mines (also known as Pressure-Plate IEDs) in Afghanistan, on 5th of September 2018. The policy was developed by a technical working group formed of DMAC top management and key representatives of the MAPA Implementing Partners (IPs). The policy is a guidance to all the implementing partners who might engage in the clearance of Abandoned Improved Mines, in the future. The Policy also intends to prevent IPs from compromising their neutrality and ensuring that AIM clearance and survey is conducted solely for humanitarian purpose.

DMAC STAFF ATTENDED THE SMC:

A group of five DMAC staff members attended the South and Central Asian Regional Senior Managers' Course (SMC) in Dushanbe – Tajikistan. This course was organized with the financial support from the US PM/WRA and was facilitated by the Center for International Stabilization and Recovery (CISR) of the James Madison University (JMU), from 25th June to13th July 2018. The course also welcomed participants from other central and south Asian countries such as Tajikistan, Kirgizstan, Kazakhstan, Turkmenistan and Sri-Lanka.

FIRING RANGES POST DEMINING IMPACT ASSESSMENT- PDIA:

66 firing ranges have successfully been cleared and handed over to the beneficiaries. As part of evaluation process, DMAC has undertaken Post Demining Impact Assessment of the cleared/closed FRs as well in order to measure the immediate and midterm humanitarian, development and socio-economic impact of demining operations in these cleared areas/firing ranges. 21 firing ranges covering 343 Sq. Km area have been assessed in 5 different regions through 5 PDIA teams to examine whether demining objectives are achieved and whether the livelihood of the communities have improved.

MAPA REPRESENTATION AT THE GENEVA MINISTERIAL CONFERENCE ON AFGHANISTAN:

The Geneva Ministerial Conference on Afghanistan was held on 27 and 28 November 2018. This conference was aimed at showcasing the solidarity of the International community with the People and Government of Afghanistan, as well as for the Afghan Government to renew its commitment in bringing reform and development.

This conference was also important in measuring the results against $ 15.2 billion commitment made in 2016 by the International community for Afghanistan.

Based on the invitation from the United Nations Assistance Mission in Afghanistan (UNAMA) and in agreement with the Embassy of the I.R of Afghanistan in Switzerland, Mr. Mohammad Shafiq Yosufi- DMAC Director, attended one of the side-meetings of the Conference on "Protecting Children to Safeguard Afghanistan's Future" and delivered a presentation. Other members to the side-event included; Ms. Sima Simar, Director, Afghanistan Independent Human Rights Commission, Mr. Cornelius Williams, UNICEF Associate Director and Global Chief of Child Protection and Ms. Danielle Bell, Chief, UNAMA Human Rights Service (HRS), Former Chief UNAMA HRS.

AFGHANISTAN PRESIDED OVER THE 17TH MSP FOR THE AP-MBC:

The Seventeenth Meeting of the State Parties (17th MSP) on the Anti-Personnel Mine Ban Convention (AP-MBC) was held from 26 to 30 November 2018, in the Geneva and was presided by the I.R of Afghanistan. The meeting was opened by Dr. Suraya Dalil Ambassador of the I.R of Afghanistan and the UN in Geneva. The opening ceremony also featured messages from the Minister of Foreign Affairs of Afghanistan, H.E Salahuddin Rabbani; the Director General of the International Committee of the Red Cross (ICRC), Yves Daccord; the Convention's Special Envoy, HRH Prince Mired Bin Raad Bin Zeid Al Hussein of Jordan; the Director of the International Campaign to Ban Landmines (ICBL), Hector Guerra; the Director of Fundacion Red, Jesus Martinez; as well as the President of the Council of Foundation of the Geneva International Centre for Humanitarian Demining (GICHD), Barbara Haering.

Mr. Mohammad Shafiq Yosufi- DMAC Director represented the Mine Action Programme of Afghanistan (MAPA) in the meeting and delivered statements on the progress of Article five, seven, nine and on Victim Assistance. Mr. Yosufi, chaired a side-event organized by the EU Non-Proliferation & Disarmament Consortium. In this side-event, Mr. Yosufi provided a list of recommendations to the donor community on how their funds can be best utilized for humanitarian mine action purpose and how donors contributions can have better results. Mr. Yosufi also took part in a side-event on Negotiating Humanitarian Access for mine action in conflict situation.

DMAC Director also had bilateral meetings with the representatives from Geneva International Centre for Humanitarian Demining (GICHD) and authorities of the Swiss Agency for Development and Cooperation (SDC) to discuss programme related strategic issue. As the president of the 17th MSP, Afghanistan handed over the presidency of the annual meeting for 2019 to the of Kingdom of Norway.

DMAC PARTICIPATED IN THE COUNTERING EXPLOSIVE THREAT AND DEMINING CONFERENCE IN LONDON:

The conference brought together key stakeholders in Explosive Ordnance Disposal and Area Clearance from across the EOD community, including NGOs, government, private sector and the military. DMAC was given the opportunity to have a keynote presentation on removing IEDs and Legacy landmines in Afghanistan which covered the following key points;

- How demining operations are currently carried out in Afghanistan
- Breaking down the demining mission – key objectives and landmarks towards a mine-free Afghanistan
- Timescales for becoming a mine free nation?
- How the international agencies can support the aim of a mine-free Afghanistan

The conference was held in London from 11 – 13 December 2018 and some of its participants included; Dr Mathew Offord MP, Chair of the All Party Parliamentary Group on Explosive Threats, Ms. Agnes Marcaillou, United Nations Mine Action Service Director, Major General (ret) James

Cowan CBE DSO, Chief Executive Officer of the Halo Trust and Ambassador Stefano Toscano, Director of the Geneva International Centre for Humanitarian Demining (GICHD).

GICHD DELEGATION VISIT MAPA TO PREPARE FOR THE 2019 DONOR COORDINATION WORKSHOP:

A delegation from the Geneva International Centre for Humanitarian Demining (GICHD), the organization facilitating annual Afghanistan and Implementing Partners Donor Coordination Workshops for Mine Action, arrived in Kabul in November 2018. The aim of the mission was to consult with DMAC, MAPA implementing partners and some donors on themes and agenda of the workshop.

During the week-long mission, Ms. Tammy Hall-Head of Strategies and Standards Division and Alain Nellen-Project Officer met with the directors of the implementing partners including victim assistance organizations in order to better plan for and organize an outcome-oriented donor workshop.

THE FIRST FEMALE DEMINING TEAM IN AFGHANISTAN CLEARED A MINEFIELD IN BAMYAN:

Based on an invitation from the Danish Demining Group (DDG), DMAC Director Mohammad Shafiq Yosufi paid a visit to Bamyan from 17 - 19 November 2018. The objective of this field visit was to attend a ceremony held by DDG and DAFA for handover of a cleared minefield located in Ahangaran Village of Bamyan Province to the intended beneficiaries. This minefield was cleared by a female demining team funded by UNMAS. This was the first female demining team in the history of the mine action programme of Afghanistan, which was jointly managed DDG and DAFA under a project funded by UNMAS. During this ceremony, DMAC Director participated in issuance of appreciation certificates to a number of demining team members who had outstanding_ performance during the course of project implementation.

DMAC Director also attended another ceremony that was held in the same province by DDG to mark the completion of a non-technical survey of five firing ranges. These firing ranges were used by the New Zealand Provincial Reconstruction Team based in Bamyan Province during the years 2003 - 2013. The ranges were surveyed once in 2014 by an international demining company, namely Sterling Demining Afghanistan (SDA). DMAC, through various channels has been encouraging the Government of New Zealand to fund the clearance of the firing ranges in Bamyan. Recently, the Government of New Zealand has promised to fund clearance of these firing ranges. To ensure validity of previous survey data and specify the current status and scale of contamination, DDG was deployed to undertake a fresh non-technical survey on these five firing ranges under a project funded by UNMAS. The fresh survey of DDG resulted in a significant reduction in the original size of contamination that had been reported by SDA.

RESURVEYING OF THE FIRING RANGES USED BY NEW ZEALAND ARMED FORCES RESULTED IN THE SIGNIFICANT REDUCTION IN THE SIZE OF THE RANGES:

The resurvey project was funded by the United Nations Mine Action Service (UNMAS) and designed for three essential components which are non-technical survey, Mine/ERW Risk Education and Permanent Markings of the accessible sides of the firing ranges. The project was awarded to Danish Demining Group (DDG) and was monitored by DMAC firing ranges quality management inspectors.

The re-survey resulted in the cancellation of one of the Firing Ranges and significant reduction in the size of the other four ranges. The total size of the contaminated area was reduced from 219 square kilometers to just 39 square kilometers.
Considering operations efficiency and the fact that initial survey of these firing ranges was carried out in a commercial context, the management of the Directorate of Mine Action Coordination (DMAC) of the Afghanistan National Disaster Management Authority (ANDMA) decided to coordinate and oversee the resurveying of the Firing Ranges through one of MAPA's humanitarians implementing partners.

UNMAS/DMAC FEMALE STAFFS' EXPOSURE VISIT TO A MINEFIELD AND A DEMOLITION SITE IN BAGRAM:

On 12 December 2018, female staff from UNMAS, DMAC (Afghan Directorate of Mine Action Coordination) and HALO Trust visited a minefield and demolition site in Bagram district of Parwan province in Afghanistan. The staff had an opportunity to ask questions and witness firsthand technical procedures of demining and demolition of explosive remnants of war. In addition, they observed risk education sessions for women and children conducted by Organization for Mine Clearance and Afghan Rehabilitation (OMAR). This exposure visit helped increase knowledge and understanding of female staff working in mine action.

DMAC MIS STAFF GIVEN INFORMATION MANAGEMENT SYSTEM FOR MINE ACTION SCRIPT TRAINING BY GICHD

An IMSMA Script Training was conducted by Anne-Li from GICHD in Green Village from 28 October - 03 November 2018. Three DMAC Information Managment system (MIS) staff participated in the training which helped the participants with the delivery of Script writing method and briefing of existing scripts. In addition to this, MIS DMAC, UNMAS & GICHD had discussion on current data quality, IMSMA reporting and implementation of latest technologies in MAPA MIS. Ms. Anne-Li also provided information to the participants of the training on the new version of IMSMA (IMSMA Core). the training helped builds staff capacity.
MIS department also held an Arc GIS 10.5 training internally in order to improve staff skills. This training was conducted from 24 to 28th November 2018 by Mr. Mohammad Zaheer - GIS/Remote sensing officer. The aim of the training was to develop mapping technologies, which is necessary for planning and decision-making process. The primary objective of the training was to provide a practical approach on the principles and concepts of GIS and Remote Sensing used by MAPA. The result of the training helped staff to create, analyze and produce GIS map based on stakeholder requests.

DMAC STAFF ATTENDED RESULTS BASED MANAGEMENT (RBM) AND SYSTEMATIC QUALITY MANAGEMENT (QM) IN MINE ACTION COURSE IN SPIEZ:

Three staff members from the Directorate of Mine Action Coordination (DMAC) of the Afghanistan National Disaster Management Authority (ANDMA) participated in a five-day long training course titled "The Results Based Management (RBM) and systematic Quality Management (QM) in mine action". The course was organized by the Geneva International Centre for Humanitarian Demining (GICHD), from 12th to 16th November 2018 in Spiez, Switzerland.
The aim of the course was to show mine action staff, practitioners and donors the use of available tools and methods for managing all parts of the mine action project cycle for better results and improved quality. RBM also provides a framework to define and measure the impact,

efficiency, relevance and effectiveness of programmes. At the end of the course, the participants were awarded with course completion certificates.

DMAC REPRESENTATION AT THE REGIONAL IED AWARENESS TRAINING IN DUSHANBE:

This was a 5-day training which started on 26 November 2018 and was completed on 30 November 2018. The first four days of the training consisted of theoretical work with the final day of practical demonstrations. The course mainly covered visual indicators of IED, IED elements, counter IED principles, IED initiating systems, reaction to suspected IED, post blast analysis and evidence awareness.

Anti- governments elements (AGEs) are increasingly using IEDs in Afghanistan therefore this training will help the programme as it is prepares to deal with the challenge.

A regional IED awareness training was held in the capital city of Tajikistan in which participants from four countries (Afghanistan, Tajikistan, Kazakhstan and Kirghizstan) took part. The course was hosted by the Organization for Security and Cooperation in Europe (OSCE) and was financially supported by PMWRA with technical support of TNMAC and MoD Tajikistan. Three people represented Afghanistan in the training which consisted of two participants from the Ministry of Interior (MOI) and another participant from DMAC.

Victim Assistance:

Victim assistance (VA) programming in Afghanistan, as one of the main pillars of mine action, focused on advocacy, awareness and prevention activities within the broader context of the disability sector as required by the Mine Ban Treaty. The State Ministry for Martyrs and Disability (MMD)[2] is the focal point for victim assistance issues, participates at the highest level at states parties' meetings and act as a coordination center for victim and disability sector. The Ministries of Public Health and Education are involved in disability services and advocacy activities. The Ministry of Public Health (MoPH) is the coordinating body for Community Based Rehabilitation (CBR), physical rehabilitation and psychosocial support services; in addition to that MoPH coordinates training programmes for physiotherapists and healthcare providers; and the Ministry of Education coordinates the Inclusive Education Including special education (Sign language and Braille).

6 VA bio monthly coordination meetings were conducted During 2018, at DMAC, where all key VA/Disability National and International organizations and line ministries representatives, including MoPH, MMD, MoE and Ministry of Women Affairs (MoWA) participated. The main discussions of the meetings were coordination among the VA/Disability stakeholders, improvements, challenges and how to find solutions.

As part of Capacity Development support to State Minister office for Martyred and Disability Affairs (MMD) a project project concept is developed through implementation some 300,000 war victims (killed and injured) will going under biometric process and electronically registered into MMD system; About 15% of duplication in issuing pension will be reduced which makes around 45 million USD. Proposal is submitted to UNMAS for funding, the project will be implemented soon after receiving greenlight from UNMAS- NY.

[2] The MMD has been officially announced as State Minister for Martyred and Disability Affairs through Presidential decree by end of 2018. So now it is not belonging to Ministry of Laboure Social Affairs.

As part of Advocacy for the right of person with disability 10 Advocacy Committee meetings have been conducted and VA department had active role on it. The main outcome of these meeting which have been chaired by Afghanistan Independent Human Rights Commission (AIHRC) advocacy for the right of PwD with both government and non-government organizations, bringing amendment in Disability law, Celebration of 3rd Dec, the international day of persons with disabilities, Interviews with National and International media for the rights of person with disability.

Supported organizing of two Disability Stakeholders Coordination Group (DSCG) meetings in MMD through which the MoUs were signed between VA organizations and MMD.

Two inter-ministerial meetings have been conducted in the result of which the inter-ministerial action plan has been developed.

In addition, DMAC – VA Department in close coordination with other civil society organizations conducted and participated in different advocacy events for donors and stakeholder's attraction as advocacy efforts for victim assistance. Such events included UN day celebration, 3rd December celebration (International Day of Persons with Disabilities), 4th of April Mine action day in Marble palace with dedicated table for victim assistance and Disability, White cane day and series of media events and interviews with media.

Seven victim assistance projects were designed to be implemented during 2018, but due to lack of fund, only one project funded which started on Sep 2017 and ended on Oct 2018; the project name was "Physical Rehabilitation Khost, Farah and Kunar" which was implemented by AABRAR and DAO to provide Physical Rehabilitation services to 11,585 PwD through 3 existing PRCs (One Mobile and 2 Fixed) in 9 provinces. The project successfully completed in Oct 2018; the achievement is 13% more than the set objective.

After seven years suspension, the Afghanistan Campaign for Ban Landmine (ACBL) re-functionalized by conducting the ACBL steering committee election and then the head of committee election. New steering committee and head of the committee elected in a transparent election in which most of the Mine Action IPs and VA/Disability organizations participated.

- Standard Working Procedure for ACBL developed and shared with stakeholders.
- Three ACBL Steering committee meetings were conducted and the 4th of April has been celebrated through ACBL in 2018.

Attended one day workshop on participation of women with disabilities in elections. The workshop was conducted in Kabul by CCD, one of the victim assistance/disability national organizations.
During 2018, one new national VA/Disability organization accredited by DMAC Quality Management Department with technical support from VA department.
Four monitoring and visit mission conducted to regions for quality assurance of victim assistance projects.

I. Struggle toward conducting Need assessment of PwD

➢ The National Disability Survey of Afghanistan (NDSA) which was planned to be funded under Afghanistan Civilian Assistance Programme (ACAP III) during year 2017 and 2018, but due to some technical issues, it postponed and ACAP III was not able to fund the survey. Fortunately, at the last quarter of 2018, it was funded by the United States Agency for International Development (USAID) and will be implemented by Asia Foundation during first and second quarter of 2019.

II. Service Provided to victims

➢ The following services are provided to PwD under VTF fund;

➢ Totally 12,722 people received physical rehabilitation and disability awareness services based on the following disaggregation by gender.

VA Component	VA Sub Component	Women	Men	Girls	Boys	**Total**
Disability Awareness and Advocacy Training	Awareness	2,154	1,570	1,039	1,105	5,868
Physical Rehabilitation	Orthotics-Oro	183	831	141	329	1,484
	Physiotherapy-PT	1,404	2,384	220	417	4,425
	Prosthetics-Pro	98	793	9	45	945
Grand Total		3,839	5,578	1,409	1,896	12,722

The ACAP III was ended at the beginning of the year 2018 and until start of COMAC, the gup was filled by an Emergency Victim Assistance (EVA) project. Totally the EVA project provided Immediate Assistance packages for 1046 victims throughout the country; as well as a total of 5335 packages were distributed by COMAC during the 2018.

III. Mine/ERW and PPIED causalities in 2018

Device Type	**Female**						**Male**						**Grand Total**
	<18 Injured	<18 Killed	Total	18+ Injured	18+ Killed	Total	<18 Injured	<18 Killed	Total	18+ Injured	18+ Killed	Total	
AP	0	0	0	0	0	0	5	4	9	1	1	2	11

PPIED (IM)	44	15	59	40	25	65	161	72	233	246	173	419	776
Grand Total	**85**	**38**	**123**	**48**	**28**	**76**	**482**	**211**	**693**	**304**	**219**	**523**	**1,415**

IV. DMAC/UNMAS supports the Government in relation to VA:

State Ministry of Martyrs and Disability (MMD)

The biggest change and achievement of the year 2018 for Victim Assistance and Disability was establishing an independent authority for Martyrs and Disability in structure of the government of Afghanistan. Until 3rd quarter of 2018, the Disability as a deputy ministry, was part of the (Ministry of Labor, Social Affairs, Martyrs and Disability (MoLSAMD), but due to continual advocacy and efforts of the VA/Disability organization, finally the new authority established and now the disability has a dedicated authority under the structure of the Afghanistan government. This authority will exactly do the responsibilities of the M&D deputy ministry of ex MoLSAMD with lots of new tasks and responsibilities.

The MMD Nationally coordinates VA and disability issues in Afghanistan and beside of other stakeholders DMAC and UNMAS provide them with technical and some financial support through VA Department of DMAC, which is actively engaged in conducting Disability Stakeholders Coordination Group (DSCG) meetings focus on disability issues in Afghanistan according to Afghanistan National Development Strategy, Law on the Rights and Benefits of Persons with Disabilities and other national and international documents on disability issues.

Main activities carried out by MMD with support of DMAC – VA department during 2018 include:

As part of Capacity Development Support to MMD, VA department worked very close with MMD for the following issues:

- Develop the new organizational structure based on the requirements for a national focal point for victim and disability and coordination center of all relevant affair in light of Afghanistan Disability Law, UNCRPD, CBR, CCM, MBT, ILO…etc.
- Process map for service delivery to Person with disability and heir of martyrs based on single window management.
- Database for services in MMD, to collect all services which are provided to person with disability in Afghanistan.
- Supporting MMD in development of inter-ministerial action plan
- Facilitated two Disability Stakeholders Coordination Group (DSCG) meetings, which are chaired by deputy minister.
- Discussions in these meetings included; amending disability law, 3rd December celebration, discussion on CRPD reporting, independent directorate for disability issues, and disability employment within government agencies
- The first of Afghanistan National Disability Strategy drafted based on needs of the newly established State Ministry. The ANDS was drafted in 2017, but due to very big change in structure of the MoLSAMD, it was needed to redraft the strategy based on MMD's requirements. The first draft has been shared with stakeholders. Hopefully the second draft will be released by 3rd quarter 2019.
- Afghanistan National Disability Database which was initiated in 2017, faced with fundamental changes base on the newly established MMD; working on new changes continued during 2018, and VA department of DMAC's plan to finalize and install the database into the MMD new building until end of 2019.
- Afghanistan National Disability Database workshop conducted in Kabul on 23 July 2018 in which representatives of all VA/Disability participated and recommendation gathered for developing the final version of the ANDD. The workshop was leaded by ex MoLSAMD with technical and financial support from DMAC and UNMAS.

- Two Inter-ministerial board meetings conducted in Kabul by participation of all Ministries of the Afghanistan government. Action plan of each ministry regarding support of VA/Disability shared and will be followed by MMD in support of DMAC.

- 3rd workshop regarding transition of Kandahar PRC from HI to government conducted in which the transition process was reviewed and challenges discussed. The PRC will be completely transited to government until end of 2021 in a five years process.
- MMD supported in drafting and signing of MoUs with 8 VA/Disability organizations. The MoUs will be renewed during 2019 based on new structure.
- The 3rd Dec (International Day of Persons with Disabilities) was celebrated by VA/Disability organizations leaded by AIHRC. It was an advocacy event in which number of famous medias were attended.

ii. Ministry of Public Health VA activities:

The MoPH Disability and Rehabilitation Program was able to carry out the followings during the reporting period:

- The Disability and Rehabilitation Task Force and Disability Program Profile reviewed and revised.
- Disability indicators has been finalized and included in the health information system.
- Quality assurance tools has been finalized.
- Advocacy Committee has been established.
- Training of 240 physiotherapists with three years diploma
- Training of 40 orthopedic technologists with three years diploma
- Capacity building of 1,000 health staff on disability and rehabilitation services.
- Establishment of Disability Awareness Working Group.
- Training of Health Staff on United Nation Convention on the Right of Person with Disability (UNCRPD).

iii. Ministry of Education

VA Disability Awareness and Inclusive Education (IE)

The overall objective of DMAC/MoE joint work for VA/disability in MoE are;

a) To increase the level of awareness and commitment to VA/disability as a cross - cutting, right based and development issue to be addressed by government, civil society groups and international community in Afghanistan.
b) To provide capacity building support to inclusive education department of ministry of education to define inclusive policies and long term strategies and programmes for inclusive education as well as providing inclusive education trainings to teachers, headmasters, children with disabilities and their parents, providing inclusive education tools/materials to needy children (children with disabilities who have been enrolled into general schools) in order to make schools accessible for enrolling children with disabilities into general schools. The following are some specific activities in this regard carried out by MoE and close support from national & international organizations during the reporting period:

- VA- Department attended and supported 7 Inclusive and Child Friendly Education Coordination Working Group (I&CFE-CWG) meetings during 2018. The meetings chaired by MoE with participation of all national and international organizations working for

Inclusive Education. Mainly meetings were focused on inclusion of the children who have not access to education, in particular, Children with disabilities. One of the very important achievement of the meeting during the year 2018, is finalizing the "Psychosocial counselling guideline for school teachers".

- Based on MoU which was signed in 2017 between MoE and DMAC, MRE and VA messages developed and shared with MRE and VA technical working groups for comments. The messages will be integrated into new national curriculum textbooks of grade 1st to 6th. The messages have already been integrated into textbooks of grades 7 – 12. Hopefully, the MoE will start working on the new curriculum in 2019 and we will be able to integrate the messages in the new curriculum.
- During 2018, a total number of 900 school teachers trained in Inclusive education who will train more teachers in their schools. This is one of the objectives of MoE to expand Inclusive education through training of teachers. The trainings were conducted in 20 provinces with financial support from national and international NGOs.
- "Special and Inclusive Education Development and Coordination" conference conducted in Kabul which was financially supported by Afghan Landmine Survivors Organization (ALSO). VA department of DMAC was co-chair of the workshop. Outcome of the workshop was some recommendations for betterment of IE in Afghanistan which will be followed by relevant sectors. Developing a database for IE was one of the very important recommendations which will be followed by ALSO in cooperation of DMAC.
- Inclusive Education ToT conducted for 80 new trainers throughout the country and 40 schools were made physically accessible through construction of ramps.
- Continue printing and distribution of big size Inclusive education awareness posters with financial support from UNICEF and distributed in the schools which are under coverage of special and Inclusive Education.
- A five-week training of Braille and sign language was conducted for 60 teachers of Kabul schools.
- Until end of 2018, a total number of 4,754 children with disabilities (3,037 boys and 1,717 girls) have been integrated into general schools of Kabul and 17 provinces with technical and financial support from national and international organization including DMAC/UNMAS, SCA, SERVE …. etc.

- 14 schools constructed in 14 provinces for gifted children (the children who are very intelligent than normal children)
- For the first time, printing of Sign language grammar by technical and financial support from SERVE organization.
- 60 school teacher of Kabul city received 5 days training of Braille and Sign language which was technically and financially support by SERVE organization.

- The first draft of the "Education for Girls" and "Out of school children" policies developed during the year 2018 which will be finalized in 2019.

- 5,000 copies of Tarbeyat magazine printed and distributed to schools in high impacted communities throughout the country. Mine Risk Education and Victim Assistance awareness messages are part of the magazine.

Challenges and Needs:

Challenge	Need
I. Data collection; 1. Lack of National Central Database 2. Lack of up to date disability data	1. To develop a central database in MMD (developing of database has been started which will be completed until Dec 2019. 2. To conduct a comprehensive Disability National survey (the survey will be completed in 3th quarter 2019)
II. Physical Rehabilitation; 1. 90% of Afghan Population lives at more than 100Km far from a rehabilitation center[5] 2. 5 of Existing PRCs (Kunduz, Faryab, Uruzgan, Kunar and Kabul Mobile) are faced with lack of fund.[6] 3. 20 Provinces out 34 have not Prostheses and Orthoses facilities.[7] 4. Lack of female health service providers especially in	1. Establish 20 Mobil and Orthopedic Workshops in 20 Provinces attached with the existing fixed Physical Rehabilitation Centers (PRC) in 14 provinces; 2. Sustainable funding to the existing 9 PRCs (5 Fixed & 4 Mobil); 3. Train female technicians and physiotherapists at all provinces
III. Inclusive Education 1. More than 190,000 school-age children with disabilities[8]; 2. In 15 provinces 7,300 CwD are going to school [9] 3. Lack of Special and Inclusive Education, including Brialle and sign languages tools; Braille boar, Braille paper and printer, sign language books, magnifier etc. 4. Analysis conducted by VA& MIS sections of DMAC 5. HI- Study "Financial Access to Rehabilitation Services in Afghanistan - 2016" 6. UNMAS/DMAC 7. HI- Study "Financial Access to Rehabilitation Services in Afghanistan - 2016 - page 20"	1. Providing direct support to CwD to enable their school attendance: identification of CwD, referral mechanisms, support access to those health, rehabilitation & social services they may need to facilitate their participation in school. 2. Working alongside family members to ensure they know in practical terms how to support the child to access and remain in school. 3. Raising awareness of community members and teachers on disability issues & rights in order to dismantle discriminatory attitudes & practices. 4. Print and import the material inside and outside the country.

VI. Advocacy; 1. Many M/ERW victims/PwD face social exclusion including relationships & family life as a result of negative attitudes. 2. PwD, including female survivors, are often excluded from certain social roles, such as marriage & parenting. 3. Discriminatory laws and policies are in place that exclude PwD from their rights.	1. Raise awareness on the VA framework and on the rights & needs of victims & PwD among key Ministries & other relevant stakeholders. 2. Develop information materials in accessible formats. Involve victims themselves as partners in awareness raising activities & in the development of the National Action Plan from the beginning of the process. 3. Identify community workers or community health workers that can be trained to provide personalized social support at local level (CBR, social & health workers, others…) 4. Develop and print awareness materials on the rights of Victims and PwD.

Afghanistan Mine Action Standards - AMAS 05.01

Second Edition
July 2013
Version 2, July 2013

Land Release

Directorate for Mine Action Coordination (DMAC)
Post Box : 520 Kabul – Afghanistan
Website: www.dmac.gov.af

Land Release

1. Introduction:

Land Release is the process of removing hazard or suspicion of hazard through Non Technical Survey (NTS), Technical Survey (TS) and or clearance operations.

Land release process shall be based on evidences and valid information gathered and collected during the implementation of NTS, TS and clearance operations. The evidence and information shall be documented and used as facts for decision making in land release process and shall be recorded in IMSMA database. This information helps mine action organizations to avoid waste of resources in those areas which should not be fully cleared in response to remove the suspicion of hazard from a piece of land.

2. Scope:

This AMAS describes the standard guidelines of land release process and related principles plus Non Technical Survey and Technical Survey requirements. The clearance standards are described in AMAS 06.01, 06.02, 06.03 and 06.04.

3. Terms and Definitions:

The following terms and definitions should be used in relation to the land release process:

a) Land Release:

The term “Land Release” describes the process of applying “all reasonable effort” to identify, define, and remove all presence and suspicion of mines/ERW through non-technical survey, technical survey and/or clearance.

b) All reasonable Effort:

The term “All Reasonable Effort” describes what is considered as a minimum acceptable level of efforts including but not limited to Non Technical Survey, Community Liaison, Technical Survey, Marking and Clearance through the application of most suitable demining assets to identify and document hazardous areas or to remove the presence and or suspicion of mines/ERW hazards from the area. “All reasonable effort” has been applied when the commitment of additional resources is considered to be unreasonable in relation to the results expected.

c) Suspected Hazard Area (SHA):

The term “Suspected Hazardous Area” refers to an area where there is reasonable suspicion of mine/ERW contamination on the basis of **Indirect Evidence** of the presence of mines/ERW.

d) Confirmed Hazard Area (CHA):

The term “Confirmed Hazardous Area” refers to an area where the presence of mine/ERW contamination has been confirmed on the basis of **Direct Evidence** of the presence of mines/ERW.

e) Non-Technical Survey (NTS):

The term “Non-technical Survey” refers to the collection and analysis of data, without the use of technical interventions, about the presence, type, distribution and surrounding environment of mine/ERW contamination, in order to define better where mine/ERW contamination is present, and where it is not, and to support land release prioritization and decision-making processes through the provision of evidence.

Note: Nationwide Non Technical Survey is being conducted by specified Non Technical Survey teams in Afghanistan. This is the responsibility of all demining teams to conduct fresh non technical survey prior to undertake technical survey and/or clearance operations, in order to reclassify the area based on new information and evidence or to confirm available information of nationwide non technical survey intervention.

f) Technical Survey (TS):

The term “Technical Survey” refers to a dynamic process of collection and analysis of data and information about the presence, type, distribution and surrounding environment of mine/ERW contamination using appropriate technical/intrusive demining assets, in order to define better the extent and locations of mine/ERW contamination within the hazard areas and identify areas where there is no mine/ERW contamination and to support land release prioritization and decision making processes through the provision of evidence.

g) Clearance:

The term “Clearance” in the context of mine action, refers to tasks or actions to ensure the removal and/or the destruction of all mine/ERW hazards from a specified area to a specified depth.

h) Cancelled land (m2):

The term “Cancelled land” refers to a defined area concluded not to contain evidence of mine/ERW contamination following the non-technical survey of a SHA/CHA.

i) Reduced Land (m2):

The term “Reduced Land” refers to a defined area concluded not to contain evidence of mine/ERW contamination and does not require further investigation or clearance, following the technical survey of a SHA/CHA.

j) Cleared land (m2):

The term “Cleared land” refers to a defined area cleared through the removal and/or destruction of all specified mine and ERW hazards to a specified depth.

k) Area Verification:

The term “Area Verification” refers to the process of confirming the presence or absence of hazards, through objective evidence, in a reported hazard area using two accredited MDDs or an accredited machine.

l) Area Reduction:

The term “Area Reduction” refers to the process of decreasing the size of a reported hazardous area, during technical survey, through collecting more reliable information and proper assessment of the area combined with some physical intervention of either manual, mechanical or MDD assets.

m) High Threat Area (HTA):

In the context of this AMAS, the term “High Threat Area” refers to part or parts of a hazard area identified during non technical survey process that there is high probability of presence of mine/ERW hazards or high quality information indicating the presence of mine or ERW there.

n) Low Threat Area (LTA):

In the context of this AMAS, the term “Low Threat Area” refers to part or parts of a hazard area identified during non technical survey process that there is low probability of presence of mine/ERW hazards or there is low quality information about the presence of mine/ERW; however, people are afraid and uncertain to use the area because of indistinct information and evidence.

4. Land Release Approaches

The following approaches should be applied during the land release operation as applicable:

a) Land release through non-technical survey:

In this context the land can be cancelled if non-technical survey based on sufficient evidence concludes that the previously reported hazardous area does not contain any mine/ERW hazard, or that a portion of the hazardous area does not contain a mine/ERW hazard, and that there is no requirement for technical survey and clearance operations.

b) Land release through technical survey:

In this context, through the findings of technical survey, parts of the land can be reduced or the complete CHA or SHA can be released without full clearance based on analysis of evidences found as a result of technical exploration of the area.

c) Land release through clearance:

There may be situation where parts of or whole CHA require full clearance without reduction and cancellation. Full clearance shall be conducted only in those areas where actual mine/ERW hazards have been identified through technical survey.

See Annexes A and B of this AMAS for further clarification of the land release process. Annex A describes the process map and Annex B describes pictorial description of land release process.

4.1 Land Release Principles

The principles of land release process that should be applied in Afghanistan are as below:

a) Sequential response process of non-technical survey, technical survey, and clearance should be followed in land release operations until the presence or suspicion of mine/ERW hazards is removed. This enables operators to better define the area requires full clearance and resulting in effective and efficient use of demining resources.

b) A graduated response should be undertaken when addressing a SHA/CHA. This should normally involve the prioritization of survey activities over clearance. There may be occasions when it is appropriate to progress directly to clearance, but such a response should not be the default position.

c) Information gathered from the affected communities and other sources shall be documented and used as facts for decision making in land release process.

d) Affected communities should be involved during all stages of land release process in order to provide confidence to them that demining quality requirements have been met and that released land is indeed safe for use

e) Any new information relating to contamination should be assessed on the basis of evidence gathered through non-technical and/or technical survey and the analysis of any existing data relevant to the area.

f) Hazardous areas should be classified into suspected hazardous areas (SHA) and confirmed hazardous areas (CHA) based on the availability and reliability of information and whether evidence is indirect or direct for each hazard.

g) Inaccessible areas, or areas with limited information available, shall not be immediately recorded as SHA or CHA. Rather, all possible efforts shall be made to collect the required direct or indirect evidences so the hazard area could be classified and recorded as SHA or CHA.

h) While fear of the suspected presence of mine/ERW contamination may lead people to avoid a particular area, fear on its own is not legitimate evidence of contamination. Fear needs to be substantiated with other evidence before an area is defined as an SHA or CHA.

i) Effective application of the land release process means that the area remaining for clearance is better defined, therefore resulting in more efficient use of clearance assets. Clearance intervention is also an information gathering process which leads to the contaminated area being fully defined and allowing efficient decision making about when to stop clearance.

j) Land should only be cancelled, reduced and/or handed over following clearance when it is deemed safe to use after a credible and well-documented evidence-based process has been fully implemented.

k) Local participation, including both men and women, should be fully incorporated into the main stages of the land release process in order to ensure that land will be used following handover.

4.2 Associating Hazard Types with Areas

Associating specified hazard types with SHA/CHA, such as AP mines, AT mines, Cluster munitions, ERW or a combination of hazard types, ensures that reporting reflects the nature of the contamination. Identifying and associating hazard types with areas is one of the important facts that shall be covered in reporting of hazardous areas to support prioritization decisions in terms of reflecting the risks presented to the affected communities. In the event where creation of SHA can be justified, but there is insufficient evidence to determine the associated contamination type, then the hazard type should be reported and recorded as unknown.

4.3 Defining Hazardous Area Boundaries

In the context of mine action programme of Afghanistan, the boundaries of CHA and SHA should be defined both during Non-Technical Survey and then during Technical Survey and Clearance operations. CHA boundaries should be defined and established based on direct evidence of presence of mine/ERW and also their adjacent and surrounding parts in the ground where the probability of presence of mine/ERW hazards is high, in light of analysis of site specific contamination characteristics. The areas that present only indirect evidence of the presence of mines/ERW are defined as SHAs. In all cases, boundaries should be defined on the basis of evidence and information analysis in order to avoid including excessive areas.

5. Community Liaison in Land Release Operations

As per AMAS 05.04 of community liaison, involvement of communities is crucial in land release operations in terms of information exchange between mine action organization and community members; this helps organization in obtaining reliable information and evidences to be used as facts

for making appropriate decisions. Liaising with community provides clarity to the community members about the land release operations and builds their confidence that their requirements will be met and the land can be handed over to them for its intended use in a safe and efficient manner. Therefore, the community shall be consulted and fully involved in survey and clearance operations by demining organization. Community involvement should include different groups within the community including men, boys, women and girls, considering cultural limitations in the area. The appropriate local community members shall be consulted and sign off on any cancellation of a hazardous area on the Cancellation Report. See annex B to AMAS 05.02.

6. Land Release Criteria

The criteria to be met before releasing land may vary depending on local circumstances, but the required level of confidence that the land is free from mine/ERW contamination remains the same, whether cancelled, reduced, verified or cleared. The participation and agreement of stakeholders (DMAC and implementing demining organizations) are key to the development of accepted criteria. In general terms land release criteria will have been met when it can be shown that either:

a) In areas where no evidence was found, the efforts applied could reasonably have been expected to find evidence of contamination had it in fact been present; and/or

b) In areas where evidence of contamination was found, the efforts applied could reasonably have been expected to find and remove all such contamination (within specified limits).

7. Confidence in Cancelled, Reduced, Verified and Cleared Land

Before land can be cancelled, reduced, verified or accepted as cleared, it should be established, with high level of confidence, that there is no longer any evidence that the area contains mine/ERW contamination. This confidence can only be gained after **all reasonable efforts** have been made to investigate whether mine/ERW contamination is present and, when contamination is found to be present, to remove it.

7.1 Application of "All Reasonable Efforts"

The term "all reasonable effort" refers to the level of efforts required to be expended to achieve a desired level of confidence in the output of a system. Almost all of the efforts associated with the identification of hazardous land and its subsequent cancellation, reduction and clearance processes relates to the collection, processing and analysis of information in order to support decisions about where mines/ERW are mostly located to be found (and where they are not) and where further efforts should be applied.

"All reasonable effort" in mine action represents the effort that it is reasonable to expect should be applied in order to achieve the desired level of confidence that cancelled, reduced, verified and cleared land is free of mine/ERW contamination within specified limits. The effort is 'reasonable' when it can be shown, on the basis of reason (or logic), that the efforts applied could be expected to have discovered evidence of contamination had been present, and/or could be expected to have found and destroyed/removed all contamination where it was present.

"All reasonable effort" for the cancellation, reduction, verification or release following clearance of previously recorded hazardous areas is reached at a point where sufficient and reliable information and evidences have been collected to conclude with confidence that there is **no evidence of** mine/ERW contamination anymore. A range of information analysis based on survey and clearance findings are required to reach such a point.

"All reasonable effort" may include, but not be limited to:

a) Identifying and accessing all relevant sources of information including women, girls, boys and men, as well as historical and analytical material;

b) Establishing and maintaining appropriate and effective information management systems;

c) Establishing and maintaining appropriate and effective quality management systems;

d) Carrying out appropriate practical activities, using competent resources and appropriate procedures in order to define, analyze and respond to evidence of contamination;

e) Monitoring the performance of the land release process and improving it in light of the results of monitoring;

f) Monitoring the quality of cancelled, reduced and cleared land and taking action to improve the process in light of the results of such monitoring; and

g) Establishing and maintaining appropriate and effective communication systems to ensure that stakeholders understand, agree with and accept the land release process.

The following should be defined:

a) Reasonable levels of effort required to investigate, collect, report and analyze evidence of mine/ERW contamination;

b) Objective criteria for assessing and quantifying the individual survey value of all types of non-technical survey information; and

c) Criteria for the amount and reliability of information required to make survey conclusions.

7.2 Quality Management

The quality of land release process shall be assured by both demining organization and DMAC. Monitoring should be conducted during non technical survey, technical survey and clearance operations. Demining organization shall develop their internal QA/QC SOPs in line with AMAS 03.01.

If, following the return of land to the intended beneficiaries, evidence of remaining explosive hazards is found, then a rapid response team with appropriate assets shall be deployed to remove the remaining explosive hazards and a transparent investigation shall be conducted in order to investigate why the explosive hazard was not identified, found and cleared. The result of the investigation shall be recorded and any lesson learnt circulated within the MAPA.

8. Land Right

Land release contributes to increase of land value which may result to land grabbing and dispute.
The land release operations shall be conducted in such a way to avoid contributing to land dispute, land grabbing, destroying the boundaries of land and use of land for illicit purposes such as cultivation of illicit crops or illegal extraction of natural resources. The mine action organizations shall make sure to find out the possible land dispute as a result of mine action intervention through maintaining proper community liaison prior to conduct of any land release operations.

No land release operation is to be conducted in areas where there is land dispute and also possibility of land dispute as a result of demining operations. The demining organization shall make sure to reflect the land right issue in their land release SOP and also reflect the required preventive actions addressing the land right issue while planning any demining project.

9. Documentation

The records of non technical survey, technical survey and clearance implemented throughout the land release process shall be properly documented and recorded in line with AMAS 08.02. The reported information shall be recorded in IMSMA.

10. Post Demining Impact Assessment (PDIA)

Post Demining Impact Assessment should either be conducted by demining organizations involved in land release or the DMAC. This can mitigate the possible residual risk within the area.

If findings of PDIA indicated any evidence on existing of mine/ERW hazards, then a rapid response with appropriate assets shall be deployed as immediate action and also a transparent investigation process shall be conducted in order to find the main causes of this undesired issue. The result of the investigation shall be properly recorded as lesson learned.

11. Liability in Post Land Release Accidents

Following the land release operations by any mine action organization applied in accordance with the requirements of AMAS and DMAC approved internal SOPs, related organization should not be liable about any harm or death caused by mine or ERW especially on those areas where “no evidence of” hazard is reported and recorded. Unless it is determined, through detailed investigation that the mine action operator failed to meet the requirements of AMAS and DMAC approved SOPs.

DMAC shall convene a board of inquiry in order to technically investigate the circumstances of post land release accidents. Factual based decision shall be made about the liability of an organization about such accidents. Adhering to the land release standard guidelines and the concept of all reasonable efforts mitigate the liability of a demining organization about post land release accidents.

12. Land Release in ERW Hazardous Area

The same principles should be applied during the land release process of all AIED contaminated areas including Non Technical Survey, Technical Survey and Clearance operations. Decision on releasing the land using appropriate approach during surface BAC clearance is easy; however it is challenging in subsurface BAC operations; therefore, any land release approach in BAC operations shall be based on analysis of evidences and information gathered during non technical survey, technical survey and clearance operations. For ERW clearance standards, refer to AMAS 06.02 and 06.03.

13. Land Release in Randomly Laid Mines

Hazardous areas may contain mines laid in a random pattern, where there are no clearly identifiable mine lines mainly in AT contaminated areas; In such cases, it may not be possible to determine through non-technical or technical survey LTAs or HTAs, or exactly where clearance within a SHA or CHA is required to remove all mines. As such, it may be necessary to clear an entire SHA or CHA in order to remove all suspicion of mines.

14. Responsibilities and Obligations

Directorate of Mine Action Coordination (DMAC) shall:

a. Accredit the demining organisations capable of land release, through non-technical survey, technical survey and clearance operations;

b. Maintain the national database using the information collected through the land release process.

c. Conduct quality assurance (QA) of the process in order to make sure the land release process has been conducted in a safe, efficient and effective way.

Demining organisations shall:

a) Gain accreditation from DMAC to perform non-technical survey, technical survey, and clearance.

b) Adhere to the concept of land release during survey and clearance.

c) Develop standard operating procedure (SOP) for survey and clearance.

d) Develop training packages used for training of their relevant personal involved in survey and clearance.

e) Deploy suitably trained and experienced team command group and supervisors to ensure effective and efficient land release through survey and clearance.

f) Report and make available all documentation as specified by the DMAC.

g) Establish and maintain close liaison with affected communities with regards to all survey and clearance decisions.

h) Develop and implement proper internal QA and QC mechanism for survey and clearance operations.

Afghanistan Mine Action Standards - AMAS 05.02

Third Edition,
July 2013
Version 3

Mine ERW Survey

Directorate for Mine Action Coordination (DMAC)
Post Box : 520 Kabul – Afghanistan
Website: www.dmac.gov.af

Mine and ERW Survey

1. Introduction

As part of the land release process, mine and Explosive Remnants of War (ERW) survey plays key and critical role in proper identifying the type, nature and extent of the mine/ERW contaminated areas. Mine/ERW survey can ensure safe, efficient and effective use of demining assets for hazards removal or removal of suspicion from reported mine/ERW hazardous areas.

This is important to consider the nature of contaminated land, worksite condition, types and extent of anticipated hazards during the survey operations in order to select the most suitable approach for the land release process. The approach taken may be different for each worksite and shall be based upon those specific requirements determined during a comprehensive survey process. Therefore, a comprehensive plan should be made to conduct safe, effective and efficient mine/ERW survey operations.

2. Scope

This AMAS provides standard guidelines and requirements for execution of mine action Non Technical and Technical Survey operations in Afghanistan.

3. Terms and Definitions:

The terms and definitions are reflected in AMAS 05.01 for land release.

Non Technical Survey

1. General

Non-technical survey is a process of information gathering through which evidence based decisions are made about newly reported and also previously recorded hazardous areas.

Commonly, the original hazard data comes from broad nationwide surveys such as Landmine Impact Survey (LIS) and or Mine/ERW Impact Free Community Survey (MEIFCS) which are being conducted rapidly and as such, may not fully address the needs of site-specific operational planning for further technical or clearance operations. This is more likely that changes will occur in nationwide survey data as a result of peoples' intervention and also emerging of update and new information about the recorded SHAs or CHA.

Non technical survey is of prominent importance for collecting update information used for successful planning and implementation of demining operations. Survey provides information on possible boundaries of mine/ERW contaminated areas and will ensure that clearance resources are used efficiently, effectively and safely on priority tasks.

2. Responsibility and Obligations

DMAC is responsible for, and shall consider the followings:

a) Develop the standard related to non-technical survey.

b) Accredit demining organizations for capability to conduct non technical survey

c) Record and maintain documentation of non-technical survey.

d) Utilize the information collected through the non-technical survey process to understand better the nature, extent, priority and distribution of contamination.

e) Develop specific criteria for recording and cancellation of SHA/CHA.

f) Conduct Quality Assurance and monitoring of non technical survey operations to make sure that the quality requirements of non technical survey operations are met.

All involved mine action organizations working in Afghanistan are responsible for, and shall consider the followings:

a) Obtain accreditation to conduct non-technical survey;

b) Adhere to the national standards for non-technical survey;

c) Develop SOPs in light of AMAS describing how non technical survey operations should be carried out;

d) Develop non technical survey training package;

e) Describe all possible reasonable efforts associated with non technical survey in their SOPs, so field operators could use it during non technical survey operations;

f) Conduct survey and collect required information deploying capable and talented surveyors;

g) Provide reports and non technical survey related documentation as specified by DMAC;

h) Maintain good community liaison and consult closely with the affected communities involving them with regards to all decisions made as a result of non technical survey; and

i) Provide feedbacks related to comments received from DMAC in terms of quality, timeliness and content of the reports.

3. Purpose

The main purpose of non-technical survey is to collect and analyse data and information related to a reported or previously recorded hazardous areas resulting on removal of suspicion or recommendation on conducting subsequent technical survey and clearance operations.

Conduct of non-technical survey is normally without physical use of demining assets and without entering into the hazard areas; however, demining assets may be required to establish access lanes to areas that would otherwise be inaccessible; this will help to collect reliable data and evidence for factual decision making.

Non-technical survey may serve the following purposes:

a) Assess whether previously reported hazardous areas remain contaminated by mines/ERW.

b) Refine the original size or limits of a reported hazardous area.

c) Cancel reported hazardous areas that no longer pose a mines/ERW threat to a community.

d) Identify socio-economic and threat factors that may influence future priority setting.

e) Identify and report hazardous areas not recorded during previous surveys.

4. Sources of Information:

Demining organisations shall make sure that all relevant information sources are identified, interviews are conducted and all the obtained information is properly recorded.

Information gathering process shall be structured in such a way that the most reliable sources with specific knowledge about the area have been interviewed as part of the process. All possible efforts should be made by organization to convene separate meetings with different groups of communities such as male, female informants and children using appropriate and applicable approaches.

Common sources of information about mine and ERW contamination in Afghanistan should include, but not limited to, the following:

a) Military personnel;

b) Affected communities;

c) Shepherds;

d) Mine and ERW survivors/victims and or their relatives;

e) Minefield/battlefield maps if available; and

f) Community members who are known to have information about the background of mine/ERW contamination.

The sources of information shall be further detailed in relevant SOPs of demining organizations involved in non technical survey.

Although the use of land by the community can serve as one of the factors in confirmation of whether or not a SHA contains landmines or ERW, but nevertheless, the survey team shall not suffice to this. Instead, depending on the degree of land use by the local population, properly assess, evaluate and analyse the situation and make facts based decision to either release the land or recommend further demining operations.

5. Impact Survey Data:

Although the impact survey is a type of non technical survey and its data may provide useful indicators of where further investigation is required, but it does not make non-technical survey unnecessary. Therefore, Impact survey data shall not be used as definite information for technical survey and land release operations; rather appropriate and comprehensive refresh non technical survey should be conducted for collecting up to date information justifying appropriate decision making for subsequent operations.

6. SHA and CHA Criteria:

This is important to have specific criteria for recording the mine/ERW contaminated area either as SHA or CHA during non technical survey process.

The criteria should be clear, agreed and understood by all involved in order to:

a) Have clear understanding on differences between SHAs and CHAs;

b) Make justifiable decision and recommendation on application of land cancellation, reduction and clearance processes; and

c) Provide an auditable framework to assist with resolving questions relating to liability in case of mine/ERW incidents.

Considering the situation, terrain, climate and history of conflict; the following general criteria shall be used for recording the hazardous areas:

a) Evidence based information that mines/ERW were laid in the area;

b) Clear information indicating that fighting occurred in the area;

c) Previous records of hazardous areas survey and clearance;

d) Fear of community to use the land because of accidents to humans or animals;

e) Mine and ERW associated evidences indicating the presence of mines/ERW;

f) Information related to evidence of killed animal carcasses as a result of accidents to animals;

g) Information about mine/ERW accidents craters;

h) Written or verbal reports from local sources of accidents; and

i) Information about detonations during burning or other land use.

Above information can be classified based on their reliability to direct evidences and indirect evidences which will sever for decision making during non technical survey to record the hazard either as SHA or CHA.

6.1 Direct Evidences:

Direct evidences are reliable information which provides confidence on presence of mines/ERW and thus can be used for recording the area as CHA. Direct evidences include the followings:

a) Information gathered from the people and institutions with sound knowledge of when and where the mines were laid.

b) Information gathered from survival/s of mine/ERW accident/s or their relatives, showing the location of the accident.

c) Information from nomads and shepherd who have been witness of mine/ERW accidents.

d) Visible or known mine accident craters.

e) Known military positions.

f) Dead animal bones due to mine/ERW accidents.

g) Local mine/ERW marks.

6.2 Indirect Evidences

Indirect evidences will include the following to conclude recording the hazard as SHA:

a) Information gained from persons and institutions without being involved in mine contamination or did not observe the mine laying or accidents themselves, but has been told about the mine/ERW hazards.

b) Fear of people not using potentially productive land without proven evidences on presence of mine/ERW.

c) Vague information from former combatants showing huge areas but not sure about the exact location of the mine/ERW contamination.

d) Mine/ERW records, where the reliability of such records remains open to doubt.

e) Former combatant zones.

f) Evidence from previous surveys, not supported by direct evidence of the presence of contamination.

g) Mine/ERW accidents or incidents where the location of the event cannot be accurately determined.

Boundaries of SHA and CHA should be assessed as clearly and accurately as possible, based on the available evidence.

7. Non-Technical Survey Actions

Non-technical survey is being conducted continually in previously reported and recorded hazardous areas, areas that had been, somehow, identified as possibly containing mines/ERW or upon a new claim of presence of mine/ERW hazard. Upon completion of the non-technical survey it may result to cancellation of the reported area or recording it either as SHA or CHA.

Non-technical survey actions may include the following:

a) Identifying SHA or CHA.

b) Provide more likely estimations of hazard boundaries.

c) Clarification regarding hazard request and local perception of the hazard status of land, or parts of it.

d) Identification of areas where further investigation is required.

e) Providing information about type and nature of hazard.

f) Recommendations on use of the most suitable assets for subsequent technical survey and clearance operations.

g) Priority-setting of tasks that may require further mine action support.

h) Placement of marking to identify the requirement for mine/ERW including sub-munitions removal, or clearance.

i) Removal of suspicion associated with areas or parts of the areas, “cancellation”. See Annex A and B of this AMAS for cancellation criteria.

j) Adjusting the polygon of the previous SHA or CHA based on sufficient and justifiable evidences.

8. Evidence-Based Decision Making

Non-technical survey is mainly based on gathering and analysis of reliable evidences and information from different sources about mines/ERW hazards. Appropriate decision for land release through non technical survey can only be made if it is based on facts and information which come to exist as a result of proper assessment, evaluation and analysis. This information will help the team to decide whether to release the hazard area or to recommend subsequent technical survey and land release operations.

The use of all appropriate and reliable evidences in support of decision-making should be documented in order to establish and maintain confidence in non-technical survey and in the overall land release process. Such evidences should also be made available to support investigations into matters relating to liability.

9. All Reasonable Effort

The term “all reasonable effort” is used in International Mine Action Standards (IMAS) and refers to the level of efforts required to be expended to achieve a desired level of confidence in the output of non-technical survey, technical survey and clearance operations.

The requirement for having this term in mine/ERW survey AMAS is to demonstrate that all possible and required efforts shall be made for better identification of the nature and extend of hazard and proposing of suitable courses of action for removal of all presence and suspicion of mines/ERW in from the area.

The demining organizations should apply “all reasonable effort” in relation to all activities associated with conduct of non technical survey in their SOPs.

Examples of required and possible efforts expected in relation to proper conduct of non technical survey as part of land release process include, but are not limited to:

a) Establishment and maintaining good community liaison.

b) Deployment of qualified staff for conduct of non-technical survey.

c) Undertaking efforts to understand the nature and characteristics of contamination within the area.

d) Proper identification and development of suitable mechanism of access to all relevant sources of information, including available historical records, former combatants, affected populations and field locations.

e) Making sure that the information collection process in the field was planned and executed by competent and accredited survey teams, with the capability to reach all different groups of community, informants.

f) Proper and evidence based analysis of previous and newly collected data to conclude proper and practical decision-making.

g) Undertaking appropriate quality assurance efforts covering surveyors, equipment, procedures and information associated with the non-technical survey process.

The application of “all reasonable effort” relies upon an integrated system which addresses all aspects of the planning, operational, review and decision making stages.

All mine action organizations involved in non technical survey are responsible to describe all possible reasonable efforts associated with non technical survey in their SOPs, so the field operators could use them during conduct of non technical survey operations.

10. Methodology of Non-technical survey

Non-technical survey shall be carried out based on a proper plan and focus on understanding the type, nature, extent and characteristics of contamination within the hazard area.

Mine action organizations conducting non technical survey operations, shall describe non technical survey methodology and procedures in their relevant SOPs and make sure that their survey teams are collecting update and reliable information and evidences, which will be used during subsequent land release operations.

Identifying, accessing and making use of such information constitutes part of the application of “all reasonable effort”.

Mine action organizations should develop survey procedures in such a way to eliminate collecting and reporting vague and subjective information by survey teams, and instead encourage evidence based and reliable information gathering.

As part of land release process, there should be frequent reviews of information in light of what is discovered, or when significant additional information becomes available from other sources.

Below points are important for conduct of a successful non technical survey operation:

a) Review of concepts, criteria, standards and procedures relevant to non-technical survey;

b) Review of all available information relating to the area, including the results of desk assessments of previous data;

c) Confirmation of information collection requirements, as well as any additional requirements specific to the site or circumstances;

d) Consideration of the requirements of survey and needs for specific resources, skills and/or capabilities, including the ability to access all relevant sources of information covering men, women, boys and girls; and

e) Identification of any aspects of the survey requiring additional safety measures.

11. Sub-Division of Hazardous Areas during Non Technical Survey

If required and situation allows, the hazardous areas should be subdivided in order to identify, describe and more clearly reflect the presence of different hazard types or combinations of hazard types and different confidence levels associated with sources of evidences and information, and the analysis of the evidences and information.

This subdivision of hazard areas will ensure practical and suitable recommendations for the use of different and most suitable assets and/or methodologies.

Mine action organizations conducting non technical survey, should subdivide hazardous areas in such a way to properly define and describe the area with enough details. This will assist in effective and efficient deployment of resources to conduct technical survey and clearance resulting with confidence, to reduction, verification and or subsequent clearance and release of the land from mine/ERW hazards.

12. Non Technical Survey Documentation

The demining organization shall make sure that all the data, evidence and information collected and by non-technical survey teams are properly recorded, documented and reported to DMAC. Record and documentation of the results and outputs of non technical survey operations is crucial in decision making during the land release process.

Mine action organizations shall make sure that the quality of data and information reflected in documentation is high, mistakes and errors are prevented prior to processing such information in database.

The information recorded and reported during and at the result of non-technical survey, should form part of documentation required to be handed over to organizations conducting further land release operations on related hazards.

Names, age, gender, appointments and signatures of key informants should be recorded in non technical survey reports.

13. Community Liaison

Community involvement is of high importance in successful conduct of non technical survey operations. Therefore, all mine action organizations conducting non technical survey operations, shall make sure that the communities are fully involved in all stages of the process, including information collection and release stages as a result of non technical survey.

Community involvement should include men, women and children living or working in or near the suspected area and where appropriate, owners of the lands.

A process to monitor land following its cancellation as a result of non technical survey should be established. Monitoring should be properly planned and agreed between the different parties to help measure the impact of cancelled land on local life and to clarify issues related to liability and land status in case of any subsequent mine/ERW accidents.

14. Non-Technical Survey Team Requirements

When non-technical survey is undertaken, the following points shall be followed by demining organizations involved:

a) Safety: Non-technical survey teams should not take unnecessary risks by walking or driving on land/roads where there is risk of mines/ERW. Credible local advice should be sought prior to walking or driving on land, paths or roads. Non-technical survey teams should not enter the suspected area.

b) Equipment: Non-technical survey teams should be equipped with all the required equipment including but not limited to compass, measuring tap, camera, range finder, mobile phone, stationary and vehicle for transportation.

c) Training: Non-technical survey should only be undertaken by accredited mine action organizations having suitably trained and experienced personnel. Comprehensive training has a major impact on the accuracy of the result of non technical survey operation.

d) Liaison: Non technical survey teams shall maintain proper liaison with the communities, local and governmental authorities and other stakeholders. This will ensure the safety of survey teams and will help in gathering high quality information.

e) Medical backup and evacuation: The non-technical survey teams shall be equipped with a dedicated medic and a first aid medical kit; but if the situation does not allow the provision of a dedicated medic for the team, then at least one member of the team shall be trained in first aid. The team shall also gather information about the closest available medical facilities and prepare a medical evacuation plan (CASEVAC).

Technical Survey

1. General

Technical survey is detailed and topographical information gathering process in a SHA/CHA reported through non-technical survey. Technical survey can be conducted as standalone operations or may also be integrated with clearance operations.

Conducting technical survey as part of land release operations may require use of different assets, such as manual, MDD and or mechanical. Therefore, comprehensive plan should be made during technical survey operations to ensure safe, effective and efficient use of these assets.

Proper conduct of technical survey can lead to make recommendations on further conduct of clearance operations using the most suitable assets and alternatively; technical survey may add to the confidence that there are no hazards in some or all parts of the land and can be reduced, verified and released without being fully cleared.

Technical survey shall be conducted in such a way to objectively make a conclusion for releasing the land without need for clearance operations or properly identify actual hazard areas for full clearance within the polygon reported by non technical survey. This can be done only if proper and justifiable analysis of previous and new information revealed as a result of technical survey operations.

2. Responsibilities and Obligations

DMAC is responsible for, and shall consider the followings:

a) Develop standard related to technical survey.

b) Accredit capable demining organizations for conduct of technical survey.

c) Documentation for technical survey.

d) Utilize the information collected through the technical survey for planning clearance operations.

e) Develop liability issues relating to technical survey in accordance with national legislation.

f) Conduct QA and monitoring of technical survey operations.

All involved mine action organizations working in Afghanistan, are responsible for, and shall consider the followings:

a) Obtain accreditation to conduct technical survey.

b) Adhere to national standards for technical survey.

c) Develop SOPs in light of AMAS describing how the technical survey operation is being conducted.

d) Develop technical survey training package.

e) Conduct technical survey and collect necessary information using capable and talented surveyors.

f) Provide reports and make available technical survey related documentation as specified by DMAC.

g) Maintain good community liaison and consult closely with the affected communities involving them with regards to all decisions made as a result of the technical survey operations.

h) Provide feedbacks related to comments received from DMAC in terms of quality, timeliness and content of the technical survey reports.

3. Principles of Technical Survey

a) Technical survey shall be conducted in such a way to ensure safety requirement.

b) Technical survey should be a dynamic process of investigation and information gathering, therefore, any new information shall be considered in decision making for further intervention.

c) Technical survey typically complements non-technical survey; therefore, no technical survey should be conducted unless there is recommendation from non technical survey on further processing of a SHA or CHA.

d) To make sure effective and efficient technical survey operations, deployment of technical survey asset/s shall be decided based on proper assessment and analysis of each individual hazard area.

e) Technical survey result should justify the needs for subsequent clearance operations.

f) Technical survey operations may result on making evidence based decision to add more pieces of contaminated area adjacent to the SHA/CHA that had not been previously identified through non technical survey.

g) The result of technical survey should be recorded and reported for further analysis of type, nature and distribution of contamination within the surrounding environment.

4. Conduct of Technical Survey

This is important to conduct technical survey in a systematic manner and in light of non technical survey information.

The demining organizations conducting technical survey are required to develop practical plan for technical survey of each individual hazard area.

Prior to physical implementation of technical survey, the demining organization shall make sure to collect, review and analysis all available information related to each hazard areas. Review and analysis of information should include ground profile, vegetation, type of contamination and the mine/ERW density.

This will help to make decision on allocation of appropriate time and use of the most suitable asset for conduct of technical survey.

It is important that during conduct of technical survey; the demining organization should frequently review the new information discovered and in light of it, bring the required changes to the plan and methodology of technical survey.

5. Technical Survey Information and Output

All information gathered during technical survey shall be summarised in a technical survey report and then be used as technical specification for the planning and management of subsequent clearance operations or release of the land without need for clearance.

During a technical survey the following information shall be collected:

a) Definition of the type, condition and extent of hazard.

b) Assessment and confirmation of the ground in terms of the soil and metal contamination.

c) Confirmation and identifying the boundaries of actual mine/ERW hazard area/s for full clearance.

d) The suggested depth of clearance for actual hazard area which is subject to full clearance. This shall be clearly indicated in reports and maps.

e) The resources recommended for carrying out further clearance operations.

f) Reliable information which should be sufficient to determine and demonstrate providing confidence to the land users that the area is free of mines and ERW hazards.

g) Additional information for the establishment of priorities for future actions.

If the technical survey is conducted as standalone operations, then in addition to the information above, a detailed report and map shall also be prepared for entry into IMSMA.

The technical survey report and map should reflect the followings:

a) Control Markers including Turning Points and boundaries around the released land and their bearings and distances.

b) Location of visible mines/ERW and the pattern of mines (if known).

c) Locations(s) of any mine, ERW or other devices found/destroyed earlier, or during, the technical survey.

d) Boundaries of actual hazard area for subsequent clearance operations.

e) Recommendation of use of the most suitable asset for clearance operations.

f) Prominent natural features such as high ground, water courses, trees, etc.

g) Prominent man-made features within and around the hazard area.

6. Role of Technical Survey in Land Release

A robust technical survey process may in many cases provide the ability to reduce the original size of SHA/CHA. As such the operators shall be able to classify the area based on the presence or no evidence of mine/ERW hazards in the area. This can be achieved through gathering sufficient information using clearance and or verification assets such as manual, MDD and machinery.

If technical survey resulted in confirmation of no mine/ERW hazards in a part or complete CHA/SHA and the initial suspicion does not longer exist, then the land should be released and the methods used shall be recorded.

After assessment and analysis of previous and new information collected by technical survey, the team may reach to decision to recommend and identify one or more area within initial SHA/CHA to be released through full clearance.

Note: Normally, the technical survey team should reach to a decision to recommend a buffer of 5-10 meters around the boundaries of the actual areas recommended for full clearance, but the fade out distance should be site specific and dictated in light of the findings during clearance of area recommended for full clearance.

7. Targeted Investigation Approach

Targeted investigation using manual or intrusive machine is the suitable method of technical survey within a CHA, because CHA is reported by non-technical survey based on direct evidence on presence of hazard which includes reliable information and evidences about the location of mine belts, accident craters and other signs.

This can allow the team to direct their investigation (cross) lanes towards the direct evidences within the CHA. Through this approach the team will be able to deal with the direct evidences, collect more facts and evidences and reach to a decision to release some parts or the whole area without further clearance operations or identify one or more parts of the area for full clearance. In some occasions and based on evidences, the technical survey team may decide to add some portions of the land into polygon of CHA which had not been covered during non-technical survey.

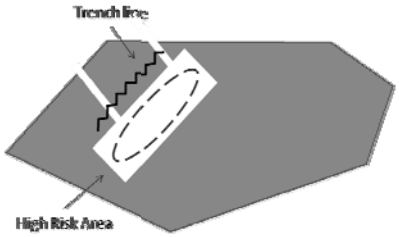
If low threat areas were identified by non technical survey, then the systematic investigation approach should be used in low threat areas; because there are no direct evidences to direct the target investigation toward them.

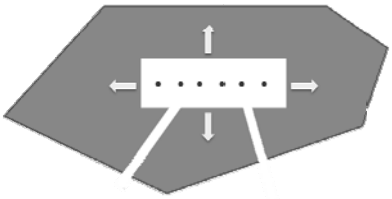
The technical survey team may use inside out approach which is a follow up of targeted investigation where the team will extend the clearance based on findings of targeted investigation to the surrounding of the targets identified in CHA.

8. Systematic Investigating Approach

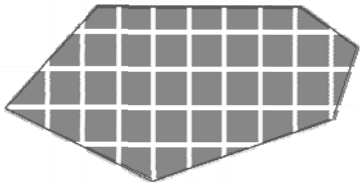
Since the SHA is recorded based on indirect evidences during non-technical survey operation and at that time it may not be possible to conclude which part or parts can possibly be of high threat and which parts low threat. Therefore, prior to start technical survey operations, the demining team should try to identify high and low threat areas through conducting a fresh non-technical survey. If it is again found impossible to divide the area to high and low threat, then the systematic approach of technical survey shall be conducted covering entire SHA. This will allow the team to find more reliable information through having access to different parts of the SHA and will also help the team to decide for clearance operation or cease the operation and release the land back to the community or land owner without need for full clearance.

In light of more evidences found as a result of systematic investigation, the team may reach to decision to change the systematic investigation to target investigation in some or whole parts of the hazard area.

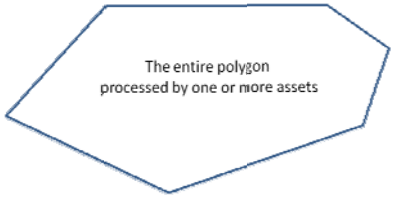




Targeted Investigation is preferred for areas with direct evidences (CHA)



Systematic Investigation is preferred for areas with Indirect evidences (SHA)



Full coverage for actual hazard areas following technical survey

9. Technical Survey Team Requirements

The following requirements shall be undertaken by organisations performing technical survey operations in the field:

a) Training: Mine action personnel involved in technical survey shall be suitably trained, experienced and qualified.

b) Equipment: Prior to deployment to the field, the organization shall make sure that the teams are properly equipped with appropriate demining tools and equipment, measuring equipments including but not limited to GPS, Camera, Compass, Measuring tape and complete drawing box. Technical survey teams may be part of a demining team which shall be equipped with transportation medical support as outline in AMAS 07.03.

c) Communication. The technical survey teams shall be equipped with suitable type of communications that allows them to maintain communications with their office.

d) Liaison: Technical survey teams shall maintain proper liaison with community, local authorities and other stakeholders and ensure that all are aware of current demining intervention.

e) Medical support and evacuation: The technical survey team shall be supported with a dedicated medic. The team shall also be aware of the closest available medical facilities and prepare a medical evacuation plan (CASEVAC) for each worksite.

f) Stationary: Technical survey teams shall be equipped with required stationary and standard IMSMA reporting formats.

Afghanistan Mine Action Standards - AMAS 06.02

Third Edition

Version 2, December 2017

Battle Area Clearance

Directorate for Mine Action Coordination (DMAC)
Post Box : 520 Kabul – Afghanistan
Website: www.dmac.gov.af

CONTENTS

Battle Area Clearance (BAC)

1. Introduction

All contaminated areas within Afghanistan that are known to contain landmine, Explosive Remnants of War (ERW) including Cluster Munitions (CMs) hazards are surveyed and recorded as a Confirmed or Suspected Hazardous Areas (CHA or SHA) in IMSMA. A number of these CHAs and SHAs will be contaminated with landmine hazards, and the requirements for clearance of these areas is detailed at AMAS 06.01. However, many CHAs and SHAs will not contain mines and the threat will be ERW and or CMs, unexploded Land Surface Ammunition (LSA) or unexploded air delivered weapons. Battle Area Clearance (BAC) is the term used to describe the systematic search and clearance of all items of ordnance and munitions within a given area.

2. Scope

This AMAS provides requirements and technical guidelines for the clearance of explosive remnants of war (ERW) and cluster munitions contaminated areas.

3. GENERAL

BAC operations involve locating and disposal of ERW, including UXO, Abandoned Explosive Ordinance (AXO) and Cluster Munitions, but not landmines, over specific areas, which may include battlefields, defensive positions and sites where air delivered or artillery munitions, including cluster munitions, have been fired or dropped. The BAC operations shall only be conducted by the organizations accredited in BAC operations.

Depending on the humanitarian priorities, land use and site specific conditions and requirements, BAC may involve surface and sub-surface clearance, however, the first option should always be the sub-surface clearance in all BAC and CMs tasks. The requirement for BAC can be in both urban and rural environments. BAC operations do not cover the disposal of stockpiled munitions in national storage facilities.

4. Battle Area Clearance Requirements and Prioritization

The priorities for BAC clearance in support of development projects, may specify an exact area to be completely searched/cleared. Different depths of clearance may be specified for different areas depending on the assessment of hazard site and the intended land use. However, for humanitarian BAC tasks, the extent of the area to be cleared should be established at the outset, but can be identified as technical survey progresses. The priorities for clearance shall be determined based on the impact of battlefields on the communities and based on the national mine action plan and AMAS 03.02 of planning and prioritization.

4.1. Quality of Clearance

The requirements for BAC depend on the extent and type of hazards, and the site specific conditions. The two categories of clearance are surface and sub-surface clearance, the clearance organization shall make an appropriate and evidence based decision on the extent of surface and sub-surface clearance to be undertaken in a BAC and CMs tasks. A comprehensive technical survey as per AMAS 05.02 requirements and Field Risk Assessment shall be conducted in each BAC task in order to support decision making process. However, sub-surface clearance should always be the first option in all BAC and CM tasks.

Surface clearance usually relies on visual search, although there may be instances where a detector should be used to aid investigation of areas of vegetation, earth mounds and other limited access suspected areas. Recording of searches, munitions types and locations of items found is crucial and can assist in determining the requirements for sub-surface search

and clearance. At minimum the sub-surface search of 20x20 meter boxes shall be conducted on all direction from the location where ERW or cluster munitions have been identified during the surface search, the boxes should be expanded based on the types of hazards and the worksite requirements.

Unless specific requirements dictate, all safe to move ERW and Small Arms Ammunition (SAA) and hazardous parts thereof, shall be removed and disposed off in a designated demolition site; in accordance with AMAS 06.03 Explosive Ordnance Disposal.

Sub-surface clearance can use various detection tools and excavation techniques. All specified ERW including CM in BAC tasks shall be removed to the required and stated depth. All the ERW and CM contaminated areas are subject to sub-surface clearance, unless technical survey identifies certain parts within a task require only surface clearance. Decision on surface clearance shall be based on the findings of technical survey and field risk assessment. All technical survey reports shall be submitted by clearance organization to related DMAC RO for approval, prior to conduct further clearance operations.

The removal and/or destruction of all or specified ERW including CM hazards, in the specified area to the specified depth shall be achieved by:

1) Assigning BAC accredited mine action organisation with operationally accredited capabilities including competent staff with appropriate levels of EOD qualification, using appropriate management practices, and applying safe and effective operational procedures (SOPs) approved by DMAC;
2) Monitoring of mine action organisation and its sub-units (see AMAS 03.01) ; and
3) Conducting post-clearance inspection of the cleared land.

4.2. Depth of Clearance

The depth of clearance in BAC and CMs tasks shall be determined by the clearance organization in consultation with DMAC RO and should be developed through the use of non-technical and technical surveys and other reliable information including technical survey and clearance of the neighboring cleared areas which can establish the depth of ERW hazards expected in the area, and an assessment of the future intended land use. Otherwise minimum clearance depth for searching different caliber ERW items should be adjusted as below:

a) 50 cm from the original ground surface for 82mm and below;
b) 100 cm from the original ground surface for items between 82 and 120 mm; and
c) More than 100 cm to several meters for heavy caliber including air dropped bombs.

The required clearance depth can be adjusted as clearance work progresses. Any change shall be agreed between DMAC RO and the clearance organisation, and shall be formally recorded. The clearance process should be repeated if there is a subsequent change to the land use which requires a greater depth of clearance.

5. Cluster Munitions (CMs)

Cluster munitions are delivered by a wide variety of launch or delivery systems, such as missiles, rockets, projectiles, mortars or aircraft dispensers. The CMs are normally dispensed in one of three ways; base ejection, nose ejection or case rupture. Since sub munitions disperse after ejection, the density of the impact footprint is dependent on the speed and altitude at which the dispenser, projectile or rocket opens.

The CMs currently found in Afghanistan are designed to detonate upon impact. The failure rate of these CMs cannot be accurately determined, unless such necessary strike data is available.

The requirements given in this standard provides the foundation and framework from which each mine action organization shall base detailed clearance procedures. These requirements shall be stated and detailed in related SOPs with clear explanations and if necessary with diagrams and sketches.

Once a cluster munitions strike area has been identified, it shall be surveyed and recorded in IMSMA. All CMs sites shall be prioritized based on the threat to human life and livelihood, and shall be cleared as per the requirements of **section 4.1 and 4.2.**

The methodology for the clearance of cluster munitions strike areas should employ a two phase approach, whereby as a means of rapidly removing the immediate and obvious cluster munitions threat which pose the greatest risk to human lives, a visual search is conducted; Phase I. The visual search is without instruments and may be non-intrusive; it is intended to identify for removing those CMs items in the immediate vicinity of built up areas and places of highest threat.

During the visual search the site supervisor shall ensure that a strict control is maintained and the area is thoroughly investigated. Those items that require to be destroyed in situ shall be clearly marked and the local population warned of the threat, before demolition. If required, protective work to be employed to minimize damages. Close liaison with the local community, local authority and any other organizations working in the immediate vicinity shall be maintained when conducting demolitions particularly in built up areas.

In addition to the removal of the immediate threat, the site supervisor shall determine as accurately as possible and record the coordinates of the center of the cluster strike. This recorded information shall be used during the next phase of clearance which is sub-surface search using detection tools and equipment; Phase II.

The purpose of the Phase II sub-surface search is to properly search the **entire cluster strike area** with detection tools. The information gathered during the Phase I visual search should be used to assist with the Phase II planning of technical survey and clearance including targeted investigation to the cluster strikes and systematic investigation in rest of the CMs task. The aim of this phase is to clear all CMs both surface and sub-surface until fade out has been achieved. The Phase II search shall be conducted immediately after phase I and may be conducted as a combination with Phase I. A site specific clearance depth shall be agreed between the clearance organization and the DMAC RO and shall be formally recorded in the clearance plan for each CMs site, signed by RO.

If any mines, tripwires or suspicion of mines are discovered during the sub-surface search, the task shall immediately be stopped, the relevant safety precautions observed and the facts reported to the DMAC RO. The organization shall then conduct field risk assessment, revise the plan as per the discovered hazards and submit it to RO for further processing and endorsement.

If ammunitions or explosive storage areas or ammunitions dump which had been damaged by direct fire, or an area with high density of ERW, are located during the clearance operations, these areas shall be marked and reported to the DMAC RO, in order to task required EOD teams for clearance.

6. Recording and Reporting

The location of all discovered CMs and confirmed strike marks shall be recorded for future reference, which will ensure a more accurate and defined representation of the strike location and facilitate the subsequent Phase II technical survey and clearance.

A major factor that should always be considered during the disposal of sub munitions is the danger posed by the formation of the jet from the shaped charge. Shaped charge jets have the potential to fly over 1800 meters in free air. Therefore, every attempt shall be made to degrade the performance of this jet. This is usually achieved by placing the donor charge in such a position that it also attacks the integrity of the cone liner. An alternative is to place a

robust barrier in front of the sub munitions to degrade the charge.

7. Render Safe Procedures (RSP)

If mine action organizations are conducting manual disarmament of the fuses then the procedure shall be clearly explained in a step-by-step manner incorporating diagrams and/or photographs. **No RSPs shall be conducted using any procedure that has not been accredited by DMAC.**
