Form A National implementation measures

- Article 7.1 "Each State Party shall report to the Secretary-General ... on:
a) The national implementation measures referred to in Article 9."

Remark: In accordance with Article 9, "Each State Party shall take all appropriate legal, administrative and other measures, including the imposition of penal sanctions, to prevent and suppress any activity prohibited to a State Party under this Convention undertaken by persons or on territory under its jurisdiction or control".

State [Party]: **Afghanistan** reporting for time period from **01 Jan 11** to **31 Dec 11**

Measures	Supplementary information (e.g., effective date of implementation & text of legislation attached).
----------	---

In addition to signing the Anti-Personnel Mine Ban Treaty, the Government of Afghanistan approved and endorsed the Afghanistan Compact and the Afghanistan National Development Strategy (ANDS) in February 2006. These two strategy papers establish benchmarks for various sectors. Mine action falls under the security sector, and its benchmarks are:

- In line with Afghanistan's Millennium Development Goals (MDGs) and Afghanistan's Anti-Personnel Mine Ban Treaty obligations, the land area contaminated by mines and unexploded ordnance will be reduced by 70% by March 2011;
- All stockpiled anti-personnel mines are located and destroyed by March 2007;

The Government of Afghanistan has stated that its constitution adopted in January 2005 requires the country to respect all international treaties it has signed. The Ministry of Defense has instructed all military forces to respect the comprehensive ban on anti-personnel landmines and the prohibition on use in any situation by militaries or individuals.

In 2002 the Government of Afghanistan entrusted interim responsibility for programme coordination to the United Nations.

As of January 2008, the Government through the modality of an Inter-ministerial Board (IMB) for Mine Action also designated the Department of Mine Clearance (DMC) under the Afghan National Disaster Management Authority (ANDMA) to work jointly with Mine Action Coordination Centre of Afghanistan (MACCA), previously UNMACA. In 2010/1389, MACCA and DMC continued to share responsibility for the coordination of all mine action activities – including planning goals for all assets (regardless of their funding modality/source), and quality assurance (QA). During 1390 DMC worked to set up process to take over responsibility for the following coordination activities:

accreditation of implementers; maintenance and Nationalization of Afghanistan Mine Action Standards (AMAS) through Afghanistan National Standards Authority (ANSA) process ; coordination of external quality assurance checks; lead coordination role for MRE with Ministry of Education; preparation of the Article 7 Report for submission to the Ministry of Foreign Affairs and submission of Ottawa Extension request.

The DMC is a government entity as decreed by former President Najibullah in 1989.

This decree remains in effect and valid for the purposes of setting up a national mine action authority.

In order to build a National Capacity for mine action into Government mechanism MACCA supports ANDMA/DMC staff to undergone 15 deferent trainings in management, planning, Quality management workshops and Senior Managers Course.

Establishing the inter-ministerial board for mine action – ANDMA/DMC supported the development of the terms of reference (ToR) for the inter-ministerial board for mine action which is waiting for the final approval of the H.E. Second Vice President of Afghanistan.

The Ottawa Mine Ban Convention requires total clearance of all anti personnel minefields by 2013. To date, the MAPA has progressed 54.94% in terms of area and 49.19% in terms of number of hazards towards this goal. An extension of this deadline has been prepared and submitted to the Implementation Support Unit of the Mine Ban Treaty in Geneva by the Afghan government in March 2012, requesting a further ten years for Afghanistan to complete its obligations.

MACCA/DMC through establishment of a group of Focal points from government interrelated Ministries and General Departments, advocated the Ottawa treaty and Afghanistan's Obligations toward AP Mines Ban.

Summary of Ottawa Extension Request:

As per above mentioned reason for non achievement of the Ottawa convention targets , the Government of the Islamic Republic of Afghanistan is initiated and submitted a ten-year extension of its deadline to complete the destruction of anti-personnel mines in mined areas in accordance with Article 5 of the Convention on the Prohibition of the use, Stockpiling, Production and Transfer of Anti-Personnel Mines and on Their Destruction.

The extension contains are summaries as following:

- Contamination currently affects a significant number of Afghan communities; AP minefields directly impacting on 1,268 communities, AT minefields on 528 communities and ERW contaminated areas on 100 communities. In sum, 1,815 communities are directly impacted, affecting 5.9% of the total number of communities in Afghanistan. Indirect impact of this contamination on other communities is considerable, affecting travel between communities and development projects that would benefit multiple communities. There are now 43 important development projects planned in Afghanistan which will require some mine action intervention, such as the railway line between Kabul and Mazar provinces, three main dam projects in Kunar, Laghman and Takhar provinces, and several road networks. The projects are vital for the country's economic development and their success can be at risk if the threat of landmines and ERW is not addressed.
- The target for Afghanistan to reach Ottawa Convention compliance is clearance of 4,151 AP minefields covering 306.81 sq km. From a humanitarian perspective, Afghanistan cannot focus only on AP removal at the expense of AT and BF removal. There are AT minefields and BF with a higher priority for clearance than some AP minefields. Therefore, 1,319 AT minefields covering 253.9 sq km and 191 ERW contaminated areas (BF) covering 56.27 sq km are also included in the work plan.
- The total budget for the 10 year period, which will ensure the clearance of all known AP and AT minefields and BF,

along with other activities such as survey, coordination and project management, is \$647.5 million. The work plan is fully achievable by the end of the extension period, provided that funds materialize on time and that the security situation allows for implementation in mined areas.

State [Party]: **Afghanistan** reporting for time period from **01 Jan 11** to **31 Dec 11**

[Narrative:]

The main goal of Mine Risk Education (MRE) in Afghanistan is to reduce the number of mine and ERW victims by changing the risky behaviors of communities and individuals living or working in impacted areas into safe behaviors. MACCA coordinates the implementation of MRE throughout Afghanistan. Implementing partners , Danish Demining Group (DDG), Handicap International (HI), the Organization for Mine Clearance and Afghan Rehabilitation (OMAR), Association for Aid and Relief (AAR Japan), Mobile Mini Circus for Children (MMCC) along with the Afghan Red Crescent Society (ARCS) targeted high, medium and low impacted communities through a variety of MRE methods including community based, returnees/IDP, Mobile Cinema, Circus, Landmine Safety Programme (LSP), public information such as broadcasting of MRE message through ERTV, National Radio/TV. MRE messages published through news letter such as Hewad, Anis, Islah and magazines included Loba/ Sports magazine.

MRE was provided to more than 1,121,729 and 80,168 people included schools teachers, students and community members are provided with disability awareness and advocacy trainings sessions to ensure enabilities and rightfull inclusion of person with disabilities in Afghan's community **2011**

The community-based MRE programme is designed to respond to the needs of communities through emergency response, community liaison networks, community monitoring of risk, mobile cinema and data collection. The programme focuses MRE activities on the needs of individual

communities based on the impact of mines and ERW on the lives and livelihoods of community members. MRE teams are deployed in high, medium impacted communities according their monthly/quarterly plans and externally monitored through MACCA and regional offices.

- Emergency response MRE provides all communities identified as having a severe mine/ERW risk with immediate mine awareness activities. MRE teams spend several days in a community to assist with the assessment of risk and to provide MRE activities.
- The community-based programme is the central community-based MRE strategy for communities considered high and medium impact. This programme is designed to disseminate information to affected communities by delivering needed MRE activities and by gaining vital information regarding mine/ERW incidents and injuries.
- Community monitoring is an activity that takes place in all communities identified as low impact. Monitoring throughout the year helps maintain data in the key areas of new victims, incidents and suspected hazardous areas. Monitoring and MRE activities as well as other programme components (teacher training, signboards, marking, etc.) ensure that mine/ERW risk awareness is maintained, safe behaviors encouraged and data is kept current.
- The mobile cinema programme provides an innovative community activity that engages larger numbers of people through the viewing of MRE and disability awareness dramas and documentary videos developed specifically for Afghanistan.
- Data collection is a vital part of any mine action programme. Incident and hazardous area reporting and new victim data are essential for risk reduction strategies, planning and programme development. MRE implementers led by the ARCS include data collection in their community activities to ensure that data is kept up to date and that other mine action resources respond to any new incidents immediately.

Returnee MRE targets the repatriating Afghan populations through activities provided at the United Nations High Commissioner for Refugees (UNHCR) encashment and transit centers near the Afghanistan borders of Pakistan and Iran. Disability and Rehabilitation Department (DRD) formally included in the Ministry of Public Health structure and have 8 full time employs including the director for the department. This department trained 1600 Medical staff in 17 provinces and 1000 fresh graduate doctors on disability awareness and physical rehabilitation issues to improve access of person with disabilities to health and rehabilitation services.

For the purpose of creating an appropriate referral system between the health facilities, rehabilitation centers and community, beside the rehabilitation program, DRD continuously collects national data from physical rehabilitation sources consisting of physiotherapy and orthopedic technology and disseminated to provincial health directorate and disability stakeholders. The collected data indicates that out of the 894 technical and administrative staff working, 560 of them were persons with disability. A disability task force and community based rehabilitation task force has been in place for almost five years and provides strong technical guidance to the MoPH. In the revised BPHS in 2009, MoPH integrated physiotherapy services in 56 district hospitals with hiring two physiotherapists in each of the stated hospitals and 14 orthopedic centers in 10 provinces and has an upgrading process for physical therapists and orthopedic technicians through a diploma courses established in 2007. DRD managed to include the training of 200 Community Physiotherapist in the MoPH proposal for the Kabul Conference and it is hope that in the next three years the project will be implemented in 8 regional Institutes for Health and Sciences of the Ministry of Public Health, the duration of the training will be 3 years. According to the new plan of MoPH with the donors community the National Priority projects (NPP) first phase implementation will start in 2012

The DRD of MoPH developed a 4 year comprehensive strategy for the physical rehabilitation services in the country with costing; this strategy will help MoPH to plan better for the health and rehabilitation services for person with disabilities. The strategy is approved by the executive board of the ministry of public health and translated into local languages.

Disability and Rehabilitation department is working on the development of standard and unified Curriculum for the CBR workers in the Country and also DRD is working with the CBR Network to translate the new CBR Guideline introduced and launched by WHO, ILO, UNESCO in 2010. Iranian AP Blast - YM-1

SPECIFICATIONS: Iranian AP Blast - YM-1

Height:	Diameter:	Length:	Width:	Weight:	Explosive:
45mm	90mm			190g	50g RDX
Case: Plastic		Color: Olive Green		Detectable by Metal Detector:	Very Difficult
Fuse: Integral pressure anti shock		Actuation Method: Pressure		Actuation Force:	10-15 kg

Description: The YM-1 is an almost direct copy of the TS-50, but it is not certain, however, that the blast resistant mechanism is the same. The TS -50 is a highly resilient scatterable Plastic cased AP blast mine with a complex pressure operated fuse.

Iranian AP Blast - No 4

SPECIFICATIONS: Iranian AP Blast – No 4					
Height: 55mm	Diameter:	Length: 135mm	Width: 65mm	Weight: 420g	Explosive: 200g Comp B
Case: Plastic		Color: Olive green		Detectable by Metal Detector: Yes	
Fuse: Copy of Russian MUV		Actuation Method: Pressure		Actuation Force: 6-8 kg	
<p>Description: The No 4 Iranian AP is a plastic cased box mine almost identical to the Israeli No 4 AP, which itself, is based on the Russian PMD-6. The two main differences between the Israeli and the Iranian models are in the main explosive fillings used (TNT for the Israeli and Comp B for the Iranian) and the fusing mechanism. The fuse for the Israeli No 4 incorporates a lead shear wire arming delay similar to that used on the Russian MUV-2 fuse, whilst the Iranian model omits this feature and is almost identical to the Russian MUV. The striker is retained by the same type of winged pin as used with the MUV but in addition it has a safety pin not found on the Russian fuse. Pressure on the hinged lid pushes out the winged pin releasing the spring loaded striker, which is driven onto the detonator. There are four raised ribs on the lid in a rectangular pattern and the main charge is encased in plastic.</p>					

Chinese AP Bounding Frag - Type 69

SPECIFICATIONS: Chinese AP Bounding Frag - Type 69					
Height: 168mm	Diameter: 61mm	Length:	Width:	Weight: 1.35kg	Explosive: 105g
Case: Steel		Color: Olive Drab		Detectable by Metal Detector: Yes	
Fuse: Type 69 Fuse		Actuation Method: Tripwire, Pressure		Actuation Force: Pull, 1.5 to 4kg; Pressure, 7 to 20kg	

Description: The Type 69 is an AP Bounding Frag mine similar in concept to the Soviet OZM series. The main body of the mine is contained in a sheet steel case, which also contains the propellant charge. When initiated, the mine is projected into the air between 1 and 2 metres and on detonation, produces 240 fragments. The mine has a lethal radius of 11 meters.

Czechoslovak AP Bounding Frag - PP Mi Sr

SPECIFICATIONS: Czechoslovak AP Bounding Frag - PP Mi Sr					
Height: 152mm	Diameter: 102mm	Length:	Width:	Weight: 3.5kg	Explosive: 325g
Case: Steel		Color: Olive drab		Detectable by Metal Detector: Yes	
Fuse: RO-8 or RO-1		Actuation Method: Pressure, Tripwire		Actuation Force: Pull-1kg Pressure-3kg	
Description: This metallic bounding frag mine is cylindrical in shape with a central fuse well. On opposite sides of the well are the filler and detonator plugs (the detonator plug being the smaller). The body of the mine fits into an outer casing that contains the propellant charge. The space between the inner and outer walls of the main body is filled with steel rod shrapnel. The mine can be used with the Soviet VP-13, MVE-72 and the NM igniters					

Italian AP Bounding Frag - Valmara 69

SPECIFICATIONS: Italian AP Bounding Frag - Valmara 69					
Height: 205mm (with fuse)	Diameter: 130mm	Length:	Width:	Weight: 3.2kg	Explosive: 420g Comp B
Case: Plastic		Color: Sand brown or green		Detectable by Metal Detector: Yes	
Fuse: Removable		Actuation Method: Trip wire, Pressure		Actuation Force: Pull-6kg Pressure-10.8kg	
Description: Has a removable fuse mounted on the top. Actuated by trip wire or can also be activated by pressure on one or more of the fuse prongs. The main charge is surrounded by more than 1,000 steel splinters, which is projected about 0.45 meters into the air before detonation. The lethal casualty radius is at least 25 meters.

Description: This is a pull or pressure operated, pin withdrawal fuse, designed for use with the Type 69 bounding frag mine. The ribbed body is topped by a thin rubber cap, which protects the safety and operating pins from dust and dirt. The top of the striker has a hole for the insertion of the safety pin, and a groove into which the operating pin arms fit. The lower end of the body is internally threaded to allow the fuse to be screwed onto a mine, which has an integral detonator.

<p>Description: This is a simple pin removal, cocked striker fuse, similar to the MUV. A short section of the striker protrudes from one end, held by the striker-retaining pin. The striker has no hole for a second 'transit' pin; and cannot be used in the tension release mode. The retaining pin is looped, for attachment of tripwire, and winged for use in box mines. The base of is internally threaded to accept its detonator.</p> <p>Pull - PP-Mi-Sr; Pressure - PP-Mi-D</p>					

Czechoslovak AP Mine Fuse - RO 8

Fuse: For PP-Mi-Sr AP Mine		Actuation Method: Pressure		Actuation Force: 3kg	

Description: This is used primarily with the PP Mi Sr AP bounding frag mine. A plunger protrudes from the top of fuse body. Three prongs are arranged as an inverted pyramid on top of the plunger. A safety pin may be placed through a hole in the plunger where it meets the fuse body. The fuse is internally threaded to accept the detonator, which is threaded at both ends. The lower threads screw into the mine fuse socket.

Soviet AP Mine Fuse – MUV

SPECIFICATIONS: Soviet AP Mine Fuse - MUV					
Height: 56mm	Diameter: 13mm	Length: 125mm (with detonator)	Width:	Weight:	Explosive: MD-2 Detonator

<p>Description: This is a simple, pin withdrawal, cocked striker fuse widely used with Soviet mines. The spring-loaded striker retained by a steel pin. There is a hole in the striker for a 'transit pin'; which ensures insufficient travel to fire detonator. The open end of the fuse is internally threaded to accept the detonator. The MD 2 detonator is externally threaded to allow the detonator and fuse to be attached to a mine.</p>					

Soviet AP Mine Fuse - MUV-2

SPECIFICATIONS: Soviet AP Mine Fuse - MUV-2					
Height: 125mm	Diameter: 12.2mm	Length: 132mm (with detonator)	Width:	Weight:	Explosive: Detonator
Case: Steel or Plastic		Color: Silver or Green		Detectable by Metal Detector: Yes	
Fuse: For various mines		Actuation Method: Pull-POMZ; pressure-PMD 6 or time delay		Actuation Force: MUV-2 0.5-1kg MUV-3 1.5-6kg	
<p>Description: This is a Development of the MUV incorporating a delay-to-arming feature. The extended body is deeply notched at the top and retains a small lead strip. This passes through a narrow wire loop attached to the end of the striker. There are two pins; one is a safety pin with a large pull ring, and a smaller pin, or winged pin, which releases the striker. Removal of the safety pin starts the cutting of the lead strip delay mechanism, which gives a delay to arming of approximately 25 to 30 minutes. The MUV-3 appears identical except for a clip on the striker-retaining pin to increase the amount of pull required to approximately 1.5kg to 6kg. The fuse can be used as a time delay device if both the safety and release pins are removed at the same time, the fuse will then function after approximately 25 to 30 minutes.</p>					

Soviet AP Mine Fuse - MUV 4

SPECIFICATIONS: Soviet AP Mine Fuse - MUV 4					
Height: 117mm	Diameter: 17mm	Length: 157mm (with detonator)	Width:	Weight:	Explosive: MD-5M Detonator

Fuse: For various mines		Actuation Method: Pull, pressure, time delay		Actuation Force: 1kg	

Description: This is a further development of the MUV-2 incorporating a delay to arming feature. The main body is similar to the MUV, but is capped by a three-section housing. The three sections screw together; the lowest of which houses the delay mechanism-retaining pin, which is a narrow pin with a pull ring. Below this is the striker-retaining pin. At the top is a shallow groove for a safety clip for the striker-retaining pin.
