WORK PLAN FOR THE PERIOD OF THE REQUESTED EXTENSION 2018-2025

1 INTRODUCTION

Angola signed the Convention in 1997 and ratified the Convention on 5 July 2002. The Convention entered into force for Angola on 1 January 2003. In accordance with Article 5 of the Convention, Angola undertook to destroy or ensure the destruction of all anti-personnel mines in its jurisdiction as soon as possible but not later than 1 January 2013. On 30 March 2012, Angola submitted a request to extend its mine clearance deadline. The request was granted at the twelfth Meeting of the States Parties and a new deadline set for 1 January 2018.

On 11 May 2017, Angola submitted a second request to extend its mine clearance deadline until 31 December 2025. The request was granted by the Sixteenth Meeting of States Parties (16MSP).

In granting the request, the 16MSP requested that Angola submit to the Seventeenth Meeting of the States Parties an updated work plan for the remaining period covered by the extension request. The Meeting requested that this work plan contain an updated list of all areas known or suspected to contain anti-personnel mines, annual projections of which areas and area that would be dealt with each year during the remaining period covered by the request and by which organizations, and a revised detailed budget.

Also in granting the request, the Meeting noted that as the success of the plan is contingent upon the findings of survey efforts, increased funding, increased capacity, coordination between national entities, the Convention would benefit from Angola informing the States Parties, by 30 April of each year, as relevant, on the following:

- a. The outcomes of survey efforts and how additional clarity obtained may change Angola's understanding of the remaining implementation challenge;
- b. Progress made relative to the annual clearance plans, commitments and milestones contained in Angola's extension request;
- c. The number, location and size of remaining mined areas, plans to clear or otherwise release these areas and information on areas already released, disaggregated by release through clearance, technical survey and nontechnical survey;
- d. Progress made regarding efforts to resolve and eliminate problems related to data discrepancies, harmonization of the data of the Executive Demining Commission and the National Demining Institute and efforts to ensure the integrity of the national mine action database;
- e. Efforts made to strengthen the implementation of the quality management system and results of efforts to update the norms and standards of management and quality control;
- f. Efforts made to strengthen the involvement and the coordination of activities with the CED, and the result of these efforts;
- g. Efforts made to strengthen the technical and operational capacities of the operations office in planning, monitoring and evaluation;
- h. Resource mobilisation efforts and external financing received and resources made available by the government of Angola to support implementation efforts, and the results of these efforts; including efforts to ensure that mine action is considered within national development plans and other relevant national plans which may benefit Angola's resource mobilisation efforts.

This document is a detailed work plan for the period of the requested extension, (2019-2025) submitted by Angola. The work plan includes an updated list of all areas known or suspected to contain anti-personnel mines, annual projections of which areas and area that would be dealt with each year during the remaining period covered by the request, and a revised detailed budget.

The document also provides a report on some of the concrete steps that Angola has taken in line with meeting the recommendations of the committee on Article 5 implementation. It should be noted from the onset that though Angola has made some progress towards the November 2017 recommendations, there is still more to do in implementing its full scope. Though faced with various challenges, the country continues to commit to the full implementation of these recommendations.

1.2 PROGRES MADE SINCE THE 16 MSP

Following the 2017 extension request, clearance and survey activities continued throughout the country with the various national and international operators, and this resulted to the remaining contamination as reported in sections 1.4 and 1.2. As of November 2018, Angola has managed to reduce it contamination by more than 90 million square meters of land. Approximately 2 million square meters reduced through technical survey, approximately 600,000 square meters cleared, and more than 50 million square meters cancelled through non technical survey initiatives. Operations

also recovered and destroyed 1,736 antipersonnel mines, 04 antitank mines and over 200 UXO. Most of the UXO items were recovered and demolished through EOD.

Following its extension request, Angola undertook various activities in ensuring the full implementation of the Article 5 committee recommendations. The activities included Non-Technical Survey on the remaining provinces of Lunda Norte and Lunda Sul, database clean-up, data harmonisation, and reconciliation processes. Though these are just a portion to the full scope of the recommendations by the committee, their implementation has yielded to recommendable progress in reducing the remaining contamination in the country.

To date, the national database has undergone rigorous clean-up and data reconciliation between CNIDAH database and operator's databases. These are still ongoing with remarkable results. CNIDAH hopes that all operator data is fully reconciled by the end of 2018. Harmonisation of reporting tools and forms is also ongoing, and once these are finished it is hoped that the historical challenges with data in the country will have been addressed. IMSMA forms have been restructured to reflect data disaggregation in line with IMAS land release terminology. These new forms are now being used by at least all international operators in the country. CNIDAH will continue building capacity of the national operators to fully utilise these new reporting formats.

CNIDAH together with the key international operator NPA, MAG, and HALO Trust have ensured that all NTS and clearance data are constantly updated into the central database at CNIDAH hence tremendously reducing the data gaps that previously existed. It should be noted that these mechanisms have ensured the drastic reduction in the remaining contamination figures in the database as shown in the progress table above. During the extension request, Angola indicated that the country still had a total of 1,465 contaminated areas measuring to 221,409,679 m² yet to be cleared by 2025. With continued NTS, clearance, verification, and database clean-up activities, this figure has reduced and as of 1st November 2018, the updated figures in the national database now reflect a total of **123,355,481 square meters** remaining to be cleared by the end of 2025.

This result indicates that the country has a clearer understanding of its remaining challenge and was able to, through survey, clearance and database cleanup activities, establish the a new baseline

Out of the **123,355,481 square meters**, only **121,071,573 square meters** are from suspected or confirmed minefields. The difference of **2,283,908 square meters** are part of the **117 roads** registered in the national database that are suspected or confirmed to be mined.

Angola would like to highlight that the figures for suspected and confirmed roads are not conclusive at this stage as further verification and re-survey will be conducted on most of these areas to fully understand and remap their contamination. CNIDAH together with other national and international operators are yet to define and agree on the parameters for mapping roads. The parameters are expected to encourage targeted clearance approaches using land release concepts, and avoid unnecessary clearance of unmined sections of the roads. It is also planned that while international operators will concentrate on clearing most of the minefields, clearance of road will be a priority for INAD and other national operators during the 2019-2025 extension period.

It should be noted that NTS processes are still ongoing on some of the suspected mined areas across the country hence the figures are bound to change as new information is gathered and updated in the database. However, experience from the ongoing NTS activities indicate further anticipated cancellation on most of the remaining SHAs. With the completion of NTS activities in Lunda Sul province by MAG, it is projected that the remaining contamination in the country should be not more than approximately 120 million square meters once NTS in Lunda Norte is completed by the end of 2018. NTS in Cabinda province is also expected to be completed by the end of the dry season in 2019.

These notable achievements in Angola continue to highlight the commitment of the country in trying to harmonise its remaining contamination, but also shows its utmost commitment in taking all the necessary steps in achieving its 2025 deadline.

1.7 QUALITATIVE PROGRESS

As mentioned previously, CNIDAH together with operators in Angola have undertaken rigorous database update, reconciliation, and clean-up activities that have resulted into the mentioned reductions of the remaining contaminations mainly through cancellations. NTS activities are still ongoing and further cancellations are anticipated in Luanda Norte by MAG before the end of 2018. Most of these areas have been revisited and remapped or cancelled. Angola anticipates that a significant part of the remaining NTS activities will have been concluded by the end of 2018.

In partnership with the three main international NGOs undertaking demining activities in Angola (MAG, NPA, and HALO Trust), CNIDAH is engaged in a capacity development initiative under the DFID

funded Global Mine Action Programme 2 (GMAP2) project. This project is aimed at supporting CNIDAH is strengthening its internal Quality Management (QM), Information Management, and Planning, Prioritisation and Coordination amongst others. In ensuring this, a Capacity Development Advisor hired by NPA is embedded within CNIDAH and principally responsible for conducting continuous on-the-job training and assistance (supported by partnership members at a provincial level). GICHD will also facilitate the development of a new National Mine Action Strategy (NMAS) in 2019.

With support of the DFID funded project through the resident capacity development advisor, CNIDAH intends to establish periodical stakeholder meeting mechanisms that will ensure a round table information sharing and interaction opportunity in the country. These stakeholder meetings will help improve communication within the programme and further strengthen cooperation within the demining sector.

2 CHALLENGES FACED IN IMPLEMENTATION

Although Angola remains fully committed to the implementation of the 2025 extension, there are still challenges that could impede the full implementation these processes. The government of Angola remains committed to providing financial and another coordination assistance to the demining sector in the country, however, there are still funding gaps that need further support from the international partners and donor community.

In its 2019-2021 financial forecast, the Government of Angola has committed a total of 55,668,014 USD towards the demining sector in the country, and a similar support is anticipated for the 2022-2025 financial forecast. Although this is a significant contribution, these funds will be shared by the three government agencies (Comissão Nacional Intersectorial de Desminagem e Assistência Humanitária (CNIDAH), Comissão Executiva de Desminagem (CED), National Demining Institute (INAD)) involved in demining in the country and mainly covering administrative overheads and salaries. Part of the contributions to CED will be used to support clearance operations for national operators however, this will be a marginal amount.

The government of Angola continues to recognise and applaud the already existing funding to the sector from various donor partners like the British Government through the DFID, Norwegian Government, and Government of Japan among others and continues to welcome for further support in order to make 2025 reality.

In the extension request the government indicated a funding gap of USD 348,355,205.80 that would support the full implementation of the 2018-2025 extension. This amount was based on the remaining contamination of 221,409,679 square meters as of November 2017. To date, continuous database cleaning, clearance, and NTS activities have drastically reduced the remaining contamination in the country to approximately **123,355,481 square meters**. With the current contamination, the funding gap projections for 2019-2025 are estimated at approximately **USD 374,247,940 USD** to enable adequate implementation of clearance activities to the remaining contamination. This budget projection is anticipated to support the implementation of clearance activities by international organisations in the country

Since the provinces of Huambo and Malange are nearing completion this year, the projected budget does not include the two provinces. The projection is also less of the **2,283,908 square meters** of roads that are anticipated to be cleared using funds from the government. (*Explanation for the new budget projection in section 4.2*)

3 UPDATED MILESTONES

MALANGE PROVINCE

Following protracted years of clearance operations in Malange by both national and international operators, Norwegian Peoples Aid (NPA), managed to clear the last registered minefield in the national database in May 2018. Though plans to declare the province free of known minefields were underway, reports of two newly suspected hazards have been brought to the attention of CNIDAH and preparations to verify these reports and areas are underway by CNIDAH, INAD and NPA.

HUAMBO PROVINCE

Huambo Province remains close to being declared free of known minefields. To date, HALO Trust has successfully cleared all hazards assigned to them in Huambo province. Preparations for the clearance on the remaining minefields under military control in the province are also under way and expected to be finalised by the end of 2018.

With these updates, it is still anticipated that Angola will be in position to declare at least two provinces free of Known minefields by the end of 2018.

4 SUMMARY OF PRODUCTIVITY AND BUDGET PROJECTIONS 2019 - 2025

With 2018 operations coming to an end with the close of the year, it is planned that the bulk of the remaining contamination of **120,725,142 square meters** will be considered into the 2019-2025 clearance projections. These projections have been made on the assumption that both Malange and Huambo provinces will be fully cleared by the end of 2018. These projection are distributed as shown in ANNEX ONE.

4.1 BUDGET AND CAPACITY REQUIRED TO ADDRESS REMAINING CHALLENGE IN ACCORDANCE WITH THE PROPOSED MILESTONES

2019-2021 GOVERNMENT CONTRIBUTION TO THE DEMINING SECTOR

SECTOR	PROJECTED YEARLY CONTRIBUTION					
	2019		2020		2021	
	AKZ	USD	AKZ	USD	AKZ	USD
CNIDAH	755,737,526.95	2,519,125.09	778,299,402.86	2,594,331.34	856,129,343.14	2,853,764.48
INAD	89,471,474.99	298,238.26	93,945,048.74	313,150.16	103,339,553.61	344,465.18
CED	4,112,483,615.41	13,708,278.20	4,719,523,096.27	15,731,743.65	5,191,475,405.90	17,304,918.02
Grand Total	4,957,692,617.35	16,525,641.55	778,299,402.86	18,639,225.15	6,150,944,302.65	20,503,147.68

In its 2019-2021 budget allocations, the government of Angola has committed to providing funds to the demining sector as shown in the table above. These funds will be prioritised towards supporting the administrative and Human resources costs at CNIDAH and its sister agencies. Components of the budget allocations to the INAD and CED will also be used in supporting clearance activities of local partners in the country. As mentioned in section 1.2 above, part of the government contribution to INAD and CED will be mainly to support clearance of roads and related infrastructure. It is also anticipated that the government's commitment in supporting demining in the country will be extended for the 2022-2025 operations.

4.2 2019-2025 PROJECTIONS

Angola mentioned in its extension request that it would require approximately **348 million USD** to complete its remaining contamination of **221,409,679 square meters** by 2025. This estimate was based on the assumption that cost of clearance per square meter would be approximately **1.57 USD**. With further consideration to prevailing operation costs, and consultations with partner mine clearance operators in the country, it is apparent that the assumption of 1.5 USD per square meter is far from the reality. Majority of operators in the country are operating at an average of **3.1 USD per square meter** and this is considered a borderline cost in running operations.

Given the magnitude of the task ahead for Angola in achieving compliance by 2025, CNIDAH has considered the recosting of the projected budget based on the 3.1 USD per square meter in order to ably support clearance operations over the period 2019-2025. With this, the revised projected budget for clearing the remaining contamination (*minefields only*) of **120,725,142 square meters** in the country is now **374,247,940 USD**. ANNEX two provides a projected yearly distribution of clearance based on the new budgetary calculation of 3.1 USD per square meter. The projections assume an annual land release of approx. **17 million square meters** which translates to about **54 million USD** in supporting all operations across the country annually.

However, it should be noted that the ongoing Non-Technical Survey exercises by international operators is expected to result to more cancelations that will further reduce the figures of the remaining contamination. These changes to the current contamination figures will probably ensure reductions to the projected costs, and these changes will be reported to the international community through the various reporting mechanisms.

It should also be noted that the already confirmed funding from actors like DFID to Angola will further contribute to the reduction of these budgetary projections.

In this regard, Angola commits to providing a final figure on the remaining contamination in its next transparency report of April 2019.

4.3 FUTURE QUALITATIVE PLANS FOR THE IMPLEMENTATION OF THE WORK PLAN

The Government of Angola through its implementing agencies like CNIDAH, CED, and INAD is fully committed to the implementation of the 2019-2025 work plan. With the existing funding commitment from the Government, CNIDAH together with other international partners in the demining sector will continue engaging in resource mobilisation initiatives in the various national and international forums.

As noted previously, Angola was chosen as one of the beneficiaries to the DFID GMAP2 project. With capacity development being one of the objectives of the project, this will help Angola enhance the information management unit of CNIDAH by developing and improving their skills and capabilities, as well as strengthen the coordination and supervision methods of the quality management teams based on the regional operational bases of CNIDAH to timely follow up in issuing handover certificates of the completed tasks. More accurate data and estimate of the remaining landmine contamination in the country will then be used for the formulation of an updated National Mine Action Strategy 2020-2023. The long-term objective is to contribute in making Angola free of known minefields by 2025. With the implementation of this project and the presence of a resident expat capacity development advisor, Angola hopes to have the right guidance in ensuring that it reaches its 2025 objective.

The government through CNIDAH continues to commit in supporting the activities of international operators in the country and ensuring full implementation of Land Release approaches to clearance operations in the country. Strengthening of cooperation through stakeholder mechanisms and periodical technical meetings with operators is expected to be established by the end of 2019.

5 COOPERATION AND ASSISTANCE

Angola continues to forge mutual cooperation's with both its existing partners, and encourages new partnerships in its pursuit towards achieving a mine free status by 2025. The government also welcomes any assistance in ensuring it has the right and adequate capacities in the implementation of its work plans and activities in the years to come. As capacity development is a critical and an integral component of institutional development, we would like to thank the UK Government for its support through the GMAP2 DFID project.

6 CONCLUSIONS

Following the 2018-2025 extension request by Angola, the country remains fully committed to the implementation of clearance activities in the country to guarantee that its compliance to the APMBT remains reality.

As highlighted, the country has already taken recommendable steps in redefining the remaining mine contamination in the country through rigorous database cleaning and updating, implementation of systematic Non-Technical Survey initiatives with the support of international implementing partners which has resulted in the cancellation of more than 98 million square meters of previously Suspected Hazardous Areas. These initiatives only highlight our commitment to the APMBT and ensuring the country is safer with no or limited landmine impact to its citizens.

The remaining contamination though drastically reduced, still remains a challenge for the country to deal with. There is still a strong need to address mined areas which are impacting affected

communities as well as continue carrying out verification efforts on some of the suspected hazards with the hope of reducing or cancelling them. While the national and international capacities to carry out such work are located in or are easily expandable into the Provinces, the limitation of resources for organizations working in mine clearance is a significant challenge. With these limitations, our 2025 end goal remains a far from reality.

The financial uncertainty, the need by organization to decrease their teams, at times ceasing operations, makes it increasingly difficult for the programme to plan specific milestones of progress to be accomplished over the coming years. For this reason, while the Government of Angola aims to increase its own resources to address the remaining contamination, we call on the international community to join us to see that Angola can fulfil its international obligations and bring safety and security to our mine affected communities as soon as possible and, if possible, by no later than 2025. It should also be noted that as is the case to any country with a long history of war and contamination from explosive hazards and mines, Angola will continue facing these challenges even after 2025 with residual risk. The magnitude and impact of residual risk is closely related to how well the current challenge is dealt with. It is our hope that the existing national and international capacities are well supported in dealing with the current threats and ensure that the some of the national capacities be transitioned into a residual risk management capacity for future threats.
