## **Executive Summary**

Mine and Explosive Remnants of War (ERW) problem in Cambodia is the result of a series of internal and regional conflicts that affected the country from the mid-1960s until the end of 1998. The anti-personnel mine problem is concentrated, but not limited to, the north-western provinces bordering Thailand, and it is still one of the densest contaminations in the world. Other parts of the country, mainly the east, are affected by ERW, including cluster munitions.

Mines and ERW have killed and injured over **65,000** people in Cambodia since 1979. Annual casualties decreased from 4,320 in 1996 to 49 in 2024. However, mines and ERW continue to kill, injure, and traumatize people and communities and severely impede social and economic recovery and sustainable development in affected areas. Throughout Cambodia, an estimated one million people still live and work in areas contaminated by mines, cluster munitions, and other ERW<sup>1</sup>.

Cambodia signed the Anti-Personnel Mine Ban Convention (APMBC) on 03 December 1997 and ratified it on 28 July 1999, becoming a State Party on 01 January 2000. Although Cambodia only became a state party to the APMBC in 2000, Cambodia has been actively releasing areas containing anti-personnel mines since 1992. Due to the magnitude and nature of the anti-personnel mine problem in the country, Cambodia was granted the first extension request with the extension period from 01 January 2010 to 31 December 2019 and the second extension request with the extension period from 01 January 2020 to 31 December 2025.

Mine Action is a foundational element of Cambodia's National Strategic Development Plan 2024–2028 (NSDP), supporting its objectives for economic growth, social equity, sustainability, and international cooperation. A 2021 study by the GICHD highlighted that mine action in Cambodia directly and indirectly contributes to 13 of the 17 Global Sustainable Development Goals (SDGs). Cambodia also established Mine Action as Cambodia's Sustainable Development Goal (CSDG 18): "*End the negative impact of Landmines/ERW and promote victim assistance.*"

Cambodian mine action aligned with the Royal Government of Cambodia's (RGC) broader national objectives, as outlined in the Political Platform of the Seventh Legislature of the National Assembly for Nation Building and Defense (2023–2028) and the Pentagonal Strategy-Phase I of the Royal Government of Cambodia of the Seventh Legislature of the National Assembly. Cambodia's commitment to mine action reflects its dedication to global peace and prosperity. It aims to create a safer environment for its citizens and contribute to international efforts to eliminate landmines and explosive hazards worldwide.

Anti-personnel mines impede safe access to agricultural land, housing land, water resources, forests, and markets. National development projects, including hydropower plants, irrigation projects, and roads, also need to be deemed safe before the start of the project. While accident numbers have been decreasing, field observations note farmers taking risks to access their land before clearance due to the need for access or expansion of agricultural land.

For the period of the current extension from 01 January 2020 to 31 December 2024, Cambodia has cleared/released a combined total of **1,203,555,889** square meters of land contaminated by all forms of explosive ordnance with the following details:

---

<sup>1</sup> Source: CMAA National Database

- **884,294,412** square meters of area containing anti-personnel mines,
- **46,567,509** square meters of area containing anti-tank mines,
- **199,315,451** square meters of area containing cluster munitions and
- **73,378,518** square meters of area containing ERW.

Operations found and destroyed **481,850** items of explosive ordnance with the following details:

- **116,396** anti-personnel mines,
- **1,381** anti-tank mines,
- **27,186** items of cluster munitions, and
- **336,887** items of ERW.

In total, from 1992 to 2024, Cambodia has cleared/released a combined total of **3,297,452,765** square meters of land contaminated by all forms of explosive ordnance with the following details:

- **2,454,832,072** square meters of area containing anti-personnel mines,
- **118,672,383** square meters of area containing anti-tank mines,
- **419,229,915** square meters of area containing cluster munitions
- **206,142,713** square meters of area containing ERW, and
- **98,575,682** square meters of areas cleared for administrative sites and risk reduction purposes.

Operations found and destroyed **4,420,489** items of explosive ordnance with the following details:

- **1,197,218** anti-personnel mines,
- **26,567** anti-tank mines,
- **67,781** items of cluster munitions, and
- **3,128,923** items of ERW.

As of 01 January 2025, Cambodia still has **424,238,236** square meters of land contaminated by anti-personnel mines in the national database. Based on this, Cambodia has developed a provisional clearance work plan for this extension period. When the comprehensive survey conducted by CMAC is completed in June 2025, Cambodia will have a clearer picture of the remaining anti-personnel mines contamination to support the preparation and submission of an updated work plan to be submitted to the Committee on Article 5 implementation by August 2025.

Cambodia requests an extension from 01 January 2026 to 31 December 2030 to address the remaining anti-personnel mines challenge. The extension period requested is based on the magnitude of the areas contaminated by anti-personnel mines to be released and the financial resources expected to be available. Cambodia requires **US\$ 116,988,192**, subject to recalculation based on the updated anti-personnel mine contamination data after completing the comprehensive survey by June 2025, to address the challenges in the national database during this 5-year extension period.

Cambodia has been committed to addressing all areas suspected of containing anti-personnel mines in the most effective and efficient ways possible. It will provide state parties with regular updates on the progress of the implementation.

## **1. INTRODUCTION**

Cambodia's mine and ERW problems resulted from internal and regional conflicts that affected the country from the 1960s until the end of 1998. The anti-personnel mine problem is concentrated, but not limited to, the north-western provinces bordering Thailand, and it is still one of the densest contaminations in the world. Other parts of the country, mainly the east, are affected by ERW, including cluster munitions.

Mines and ERW have killed and injured over 65,000 people in Cambodia since 1979. Annual casualties decreased from 4,320 in 1996 to 49 in 2024. Mines and ERW continue to kill, injure, and traumatize people and communities and severely impede social and economic recovery and sustainable development in affected areas. Throughout Cambodia, an estimated one million people still live and work in areas contaminated by mines and ERW, including cluster munitions.

Mine action is stipulated in the National Strategic Development Plan (NSDP) 2024-2028. Mine action is a foundational element of the NSDP, directly supporting its objectives for economic growth, social equity, sustainable development, and international cooperation. By clearing land, providing education on mining risk, and assisting victims, mine action unlocks opportunities for inclusive and sustainable development across the country. A GICHD study conducted in 2021 indicated that mine action in Cambodia directly and indirectly contributed to 13 of the 17 Global Sustainable Development Goals and contributed to 48 associated targets.

Cambodia adopted an additional Cambodian Sustainable Development Goal (CSDG) 18 titled "*End the Negative Impact of Mines/Explosive Remnants of War (ERW) and Promote Victim Assistance.*" This CSDG reflects Cambodia's unique challenges due to its history of conflict and the widespread presence of landmines and ERW. The CSDG 18 highlights Cambodia's commitment to addressing the legacies of war and ensuring that mine action contributes to long-term peace, safety, and development.

Cambodia signed the Anti-Personnel Mine Ban Convention (APMBC) on 03 December 1997 and ratified it on 28 July 1999, becoming a State Party on 01 January 2000. Due to the magnitude and nature of the anti-personnel mine problem in the country, Cambodia was granted the first extension request with the period of the extension from 01 January 2010 to 31 December 2019, and the second extension request with the period of the extension from 01 January 2020 to 31 December 2025.

Cambodia has put a significant effort into the Convention's implementation, including the Universalization, Implementation of Article 5, and Assistance to Victims. On 24 November 2023, during the 21st Meeting of States Parties to the APMBC in Geneva, Switzerland, Cambodia was elected President and Host of the Fifth Review Conference. This landmark event, named "The Siem Reap-Angkor Summit on a Mine-Free World", was held on 25-29 November 2024, in Siem Reap, Cambodia, marking Cambodia as the first Asian nation to assume this prestigious role. The summit, held every five years, brought together delegates from around 160 countries, solidifying Cambodia's leadership in global mine action and its dedication to a world free of landmines.

Due to the magnitude of remaining anti-personnel mine challenges, Cambodia is submitting this third extension request, which provides an overview of the accomplishment during the second extension period from 01 January 2020 to 31 December 2024 and the remaining challenges as of

2025. It also presents a rationale for the requested extension, the measures to be implemented during the extended period, and an expression of commitment for Cambodia to fulfil its obligations under Article 5 of the Convention.

## 2. ACHIEVEMENTS SINCE THE EXTENSION REQUEST WAS GRANTED

### 2.1 Quantitative Results

During the current extension request period from 01 January 2020 to 31 December 2024, Cambodia released **884,294,412** square meters of land containing anti-personnel mines. Of which, 141,551,230 square meters (16%) were released through non-technical survey, 264,692,168 square meters (30%) were released through technical survey, and 478,051,014 square meters (54%) were released through clearance. As a result, 116,396 anti-personnel mines, 1,381 anti-tank mines, 27,186 items of cluster munitions, and 336,887 items of other ERW were found and destroyed.

*Table 1: Areas containing AP mines released from 01 Jan 2020 to 31 Dec 2024 by province*

Province	Area containing anti-personnel mines released from 01 January 2020 to 31 December 2024

## 2.2 Qualitative Results

This section presents qualitative results from 01 January 2020 to 31 December 2024.

### 2.2.1 Planning and Prioritization Process for Mine Clearance

Cambodia has been implementing the **top-down** and **bottom-up** approach to the planning and prioritization process for mine clearance. The top-down approach ensures that clearance is directed to the most vulnerable villages facing higher risk from contamination, while the bottom-up approach ensures that the clearance addresses the needs of the affected villages. This approach has been viewed as effective as the needs of the affected villages are centred in our planning and prioritization.

- The top-down approach: Every year, CMAA establishes a list of priority villages based on mine/ERW casualties, village poverty, mine contamination, development requirements, and population.
- The bottom-up approach: Within the priority villages, MAPU coordinate with affected villagers and clearance operators to develop a list of priority minefields for clearance for PMAC approval and CMAA endorsement. The process is designed to be transparent, participatory, and decentralized. Mine clearance planning is intended to be effectively integrated into the commune investment programs through this process. The bottom-up criteria include a level of fear, development needs, casualty data, land classification, and planned land use.

The planning and prioritization process was further strengthened by incorporating the "*Guideline on Village Meeting to Prioritize Minefields for Clearance*" in October 2022. The objective of the Guideline is to ensure that men, women, persons with disabilities, and other vulnerable village members have an opportunity to contribute to the prioritization of village minefields before the village chief presents them at the commune meeting.

### 2.2.2 Cambodian Mine Action Standards

During the extension period from 01 January 2020 to 31 December 2024, the CMAA led the revision of the following Cambodian Mine Action Standards. The purpose of the revision is to align with IMAS and ensure that good practices and lessons learned from the field are considered to strengthen the demining work's safety, effectiveness and efficiency.

- CMAS on Organizational Accreditation and Operational License (revised in November 2020),
- CMAS on Monitoring of Demining Organization (revised in November 2020),
- CMAS on Baseline Survey - Mines (revised in December 2023).

During the same period, the CMAA led the development of the following Cambodian Mine Action Standards:

- CMAS on Information Management (developed in June 2020),
- CMAS on Explosive Ordnance Risk Education (developed in May 2021),
- CMAS on Environmental Management in Mine Action (developed in June 2022),
- CMAS on Gender and Diversity Mainstreaming in Mine Action (developed in September 2024),
- CMAS on Baseline Survey - Cluster Munitions (developed in December 2024),
- CMAS on Victim Assistance (developed in December 2024).

Based on the revision or development of the new Standards, relevant operators and other stakeholders need to revise and/or develop their Standard Operating Procedures to ensure Standard compliance. CMAA is responsible for developing and revising the Cambodian Mine Action Standards. Relevant operators and key partners are members of the Committee.

### **2.2.3 Performance Monitoring System (PMS)**

Cambodia produced Performance Monitoring System (PMS) reports since 2020. By the end of 2024, 24 PMS reports covering 24 communes had been produced and shared with donors. The purpose of the reports is to present the socio-economic contribution of mine clearance to the livelihood of the affected communities and development projects.

CMAA trained provincial Mine Action Planning Unit (MAPU) staff to collect socio-economic data from the cleared minefields. The MAPU staff physically visited the cleared minefields to collect socio-economic data by interviewing users of the cleared land and completing PMS forms. The MAPU digitally sends the collected data to CMAA, which will analyze and write the PMS reports. A PMS report consolidated results from the six PMS reports produced in 2024 is attached as Annex 1.

### **2.2.4 Mine-Free Village Mechanism**

Cambodia introduced the Mine-Free Village Mechanism in 2022, aiming to clear or release all known minefields in villages. This initiative seeks to unlock the full development potential of these communities while providing psychological relief to residents living with mine contamination.

The mine-free village mechanism is to expand the avenue for the Cambodian mine action community to mobilize additional financial resources from development partners, the private sector, non-governmental organizations, and individuals to clear only known landmine-contaminated areas, village by village, to make it mine-free so that the risk and associated fear of mine accidents is removed. Community livelihood and development activities can take place to their full potential safely. This mechanism is not designed to undermine but complement the existing contribution of the traditional donors to assist Cambodia in its efforts to achieve a mine-free Cambodia.

Clearing all known minefields within a village enhances development planning efficiency. It removes the need for programs and donors to allocate resources for landmine surveys and clearance, allowing them to focus solely on development initiatives. As of 31 December 2024, 14 provinces and one capital out of 25 have been cleared and declared mine-free.

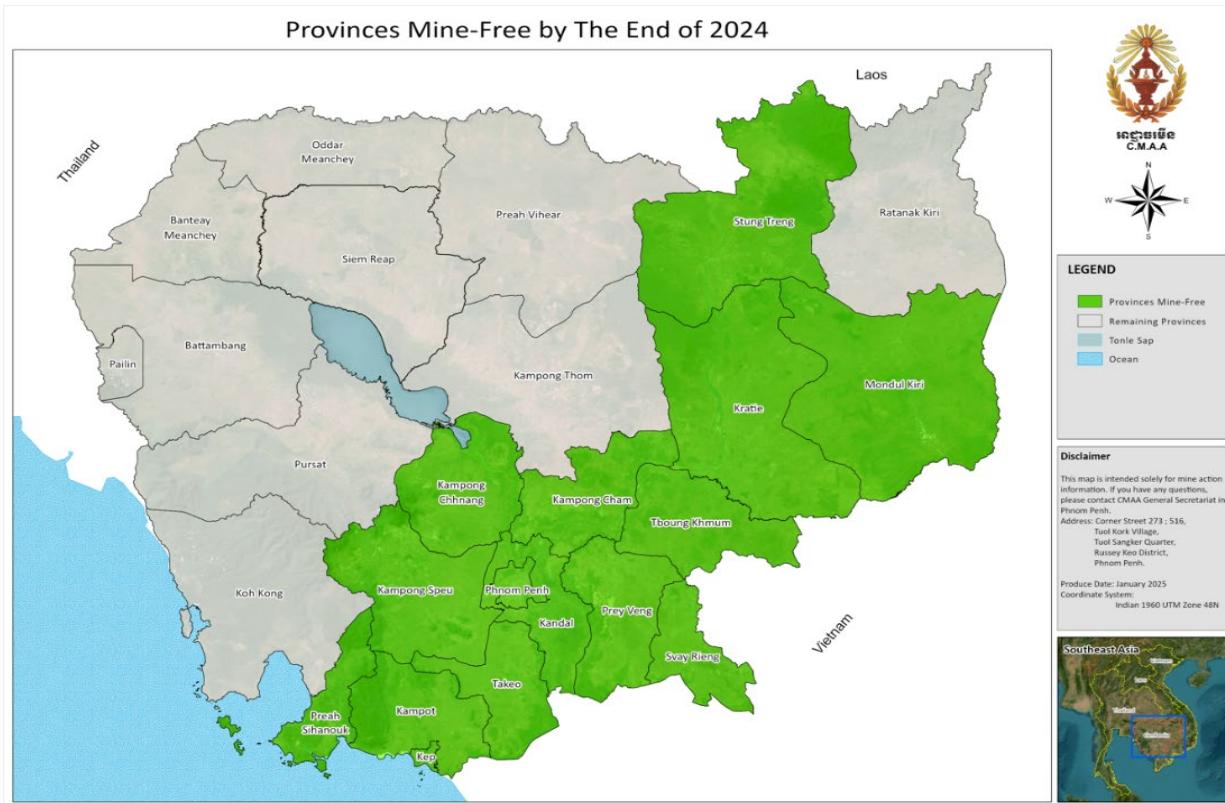

Figure 1: Cambodia map displaying mine-free provinces by 31 December 2024

## 2.2.5 Quality Management System

CMAA regulates and monitors mine action operations in Cambodia, ensuring compliance with Cambodian Mine Action Standards (CMAS). This includes accreditation and licensing mine action organizations as well as monitoring and reporting on their performance against the Cambodian Mine Action Standards and Guidelines.

Quality management in mine action involves Quality Assurance (QA) and Quality Control (QC) to ensure safety and effectiveness. QA focuses on management and operational procedures, with internal assessments by operators and external reviews by CMAA's Quality Management Teams (QMTs). QC involves inspecting the cleared land, with sampling conducted as a percentage of the total cleared area.

Non-conformities are classified as minor, major, or critical, depending on their impact on safety and compliance. Operators must take corrective and preventive actions to address identified issues. CMAA conducts follow-ups to ensure corrective measures are implemented effectively.

During the period from 01 January 2020 to 31 December 2024, CMAA's QMT conducted **11,179** inspections (9,029 QA and 2,150 QC), identifying 458 minor non-conformities, 71 major non-conformities, and 12 critical non-conformities. The most common cases of non-conformities include incorrect or missing pieces of non-critical information or problems with limited consequences to internal inefficiencies. Corrective actions were instituted, resulting in better

quality of mine action activities. Critical non-conformities that could not be addressed immediately required closing the demining sites until they were addressed.

## **2.2.6 Methods Used to Identify Areas Containing Anti-Personnel Mines**

The Cambodian Mine Action Standard on Baseline Survey (CMAS 14) was developed in January 2011. This standard specifies the requirements to identify a minefield. It was revised to address specifically landmines and named the Cambodian Mine Action Standard on Baseline Survey – Mine in December 2023, considering the field experience and lessons learned. The CMAA led the revision; all clearance and survey operators and partners attended. The purpose of the revision is to ensure that evidence exists for an area to be identified and recorded as contaminated.

## **2.2.7 Methods Used to Release Areas Containing Anti-Personnel Mines**

The Cambodian Mine Action Standard on Land Release (CMAS 15), approved in October 2014, provides requirements on the overall land release process to enhance the effectiveness and efficiency of land release operations. CMAS 15 is designed for operators to deploy available resources to areas with the greatest need by clearly defining the actual contamination status. Non-technical and technical surveys and/or clearance methods are deployed to release the mined areas where appropriate.

Land release involves three methodologies for releasing contaminated areas:

1. **Non-Technical Survey (NTS):** Uses non-intrusive methods, such as field visits and data analysis, to assess and release suspected mine-contaminated areas. If no evidence of mines is found, the area is classified as **C1**. If uncertainty remains, the area proceeds with a technical survey or clearance.
2. **Technical Survey (TS):** Involves technical interventions to confirm the presence or absence of mines. If no mines are found, the area is classified as **C2**. If uncertainty remains, the area proceeds with clearance.
3. **Clearance:** The final step applied when survey methods have been exhausted. It involves physically removing mines from well-defined areas. Cleared areas are classified as **C3**.

Each step progressively reduces uncertainty, ensuring land is released safely and efficiently. A mine-contaminated area can be released through a single or a combination of methods based on the characteristics and threats of the area.

## **2.2.8 Handover of Released Land**

CMAA has established and implemented the Guidelines on planning and prioritization, highlighting the handover process of released land, ensuring the participation of relevant stakeholders, including operators, beneficiaries, local authorities, MAPU, and the QM team to build confidence in safe and productive use of released land.

From 01 January 2020 to 31 December 2024, a total of 5,232 locations of cleared anti-personnel mine-contaminated land covering 540,905,159 square meters have been handed over to 590,397

direct beneficiaries, including 113,944 boys, 115,671 girls, 179,506 men, 176,745 women, and 4,531 people with disabilities. CMAA accepts cleared land once all mines, cluster munitions, and other ERW hazards have been removed in accordance with clearance standards and all quality management processes have been thoroughly completed and documented.

Land released through non-technical and technical surveys carries a residual risk of explosive hazards compared to fully cleared areas. In Cambodia, liability is linked to compliance with CMAA's standards. Operators who adhere to CMAS and accredited procedures are not held liable. However, failure to comply may result in a review of accreditation status, potentially leading to its revocation. CMAA enforces this through a rigorous quality management process, ensuring the highest possible standards within Cambodia's mine action sector.

### **Demining Structures**

*Figure 3: CMAC and MAPU officials preparing documents to hand over demined land to the community.*

There were no significant changes to the national demining structure during the extension request period. The Cambodian mine action sector continues to separate the regulatory and operational functions of the various operators. (*Ref. Action #2 of the Siem Reap Angkor Action Plan*).

CMAA is responsible for regulating, planning, and coordinating all mine action activities across the country. It continues to lead the development and implementation of various standards and

instructions, as well as the formulation of national mine action policy in alignment with the Royal Government of Cambodia's National Strategic Development Plans. As the government's body responsible for regulation, coordination, and monitoring of mine action, CMAA also chairs key coordination mechanisms, including the Technical Working Group on Mine Action (TWG-MA), the Mine Action Coordination Committee (MACC), and various Technical Reference Groups (TRG).

There are 5,428 demining staff from the national and international operators deployed nationwide at the end of 2024. The national clearance operator, Cambodian Mine Action Centre (CMAC), is the largest operator in the country. Accredited international operators include HALO Trust, Mines Advisory Group (MAG), Anti-Personnel Landmines Detection Product Development (APOPO), and Norwegian People's Aid (NPA).

The Royal Cambodian Army started humanitarian demining operations in 2022. The National Centre for Peacekeeping Force, Mines and ERW Clearance was tasked to clear land in support of the government's development and humanitarian projects. It was accredited to operate under the UN Peacekeeping mission. Both entities are placed under the Structure of the Royal Cambodian Armed Forces (RCAF).

The General Commissariat of the National Police also contributes to mine action, mainly in ERW reporting and delivering explosive ordnance risk education. Demining operators also provide mine risk education and victim assistance, the Cambodian Red Cross (CRC), MoEYS for explosive ordnance risk education, the Ministry of Social Affairs, Veterans and Youth Rehabilitation (victim assistance) and various NGOs.

The following operators are currently active in releasing areas containing anti-personnel mines in Cambodia.

*Table 2: Operators active in releasing areas containing anti-personnel mines*

<b>Name of the organizations</b>	<b>Men</b>	<b>Women</b>	<b>Total</b>
1. Cambodian Mine Action Center (CMAC)	1,431	368	<b>1,799</b>
2. National Center for Peacekeeping Forces, Mine and ERW Clearance (NPMEC)	576	3	<b>579</b>
3. Royal Cambodian Army (RCA)	1,170	0	<b>1,170</b>
4. Engineering Department of RCAF	43	0	<b>43</b>
5. The HALO Trust (HALO)	701	473	<b>1174</b>
6. Mine Advisor Group (MAG)	244	156	<b>400</b>
7. Anti-Personnel Landmines Detection Product Development (APOPO)	53	34	<b>87</b>
8. Norwegian People's Aid (NPA)	70	71	<b>141</b>
9. Cambodia Self Help Demining (CSHD)	21	14	<b>35</b>
<b>Total</b>	<b>4,309</b>	<b>1,119</b>	<b>5,428</b>

## **2.2.9 Efforts Undertaken to Exclude Civilians from Mined Areas**

### ***Minefield marking***

In accordance with CMAS 13: Marking Mine & ERW Hazards, demining operators mark minefields before the commencement of clearance operations (boundary marking) and during clearance operations (operational marking). Boundary marking defines the limits of clearance operations. Ideally, boundary marking should commence and be completed before clearance operations start. Due to the time consumed with boundary marking, clearance operators may carry out boundary marking concurrently with clearance operations.

Between 01 January 2020 and 31 December 2024, 2,545 new anti-personnel minefields, equivalent to 397,302,365 square meters, were identified and marked to ensure the safety of the villagers.

### ***Mine Risk Education***

Mine Risk Education (MRE) aims to reduce high-risk behaviours among people living or working in areas affected by mines. MRE programmes continued to target high-risk areas, targeting the most vulnerable people – mobile adult populations and children to achieve greater impact.

MRE activities were tailored to the specific needs of the communities and context based on consultation with MRE operators with a focus on gender and diversity inclusion. These activities include message development and delivery, media use and materials such as mass campaigns, billboards, leaflets, posters, textbooks, T-shirts, household visits, community-based volunteers, public service announcements, and law enforcement efforts. The MRE has been integrated into the primary and secondary school curriculum.

CMAA coordinated and chaired seven TRG-EORE meetings to discuss MRE materials and MRE planning and organized National Mine Awareness events (24<sup>th</sup> February) four times. CMAA developed a list of prioritized villages for annual MRE operations in consultation with operators. As part of its mandate, CMAA regularly monitored the MRE operations and provided recommendations for improvement.

Key documents have been developed and endorsed to strengthen the coordination of MRE. These documents include Cambodian Mine Action Standards 21 on the Explosive Ordnance Risk Education (EORE), a three-year EORE action plan 2021-2023 and a two-year action plan 2024-2025 that outlines the MRE roadmap for operators.

All mine action teams can provide MRE to local communities when necessary. Effective MRE is based on careful and ongoing assessment of the needs of affected communities, as well as the involvement of existing community structures and local authorities. Cambodia plans to gradually transfer MRE skills and knowledge to local communities. So far, 214 (women: 42) schoolteachers and 221 (women: 15) police officers from high-risk north-western provinces have received MRE training trainers. They will subsequently train school students and community members, ensuring the sustainability of MRE efforts at the community level.

The following organizations conducting MRE activities from 01 January 2020 to 31 December 2024 are CMAC, CRC, NPMEC, MoEY, POLICE, MAG, HALO Trust, SOS, APOPO, CMVIS, CSHD. In total, **6,432,764 people** (men: 2,285,814, women: 2,454,113, boys: 815,394, and girls: 877,443), including students, received MRE messages in various ways from 01 January 2020 to 31 December 2024.

*Table 3: MRE recipients from 01 January 2020 to 31 December 2024*

MRE Recipients from 01 January 2020 to 31 December 2024					
Year	Men	Women	Boys	Girls	Total
2020	621,673	628,922	216,891	132,745	1,600,231
2021	421,890	454,136	77,108	65,501	1,018,635
2022	539,668	593,714	149,896	292,863	1,576,141
2023	271,762	298,251	100,872	107,048	777,933
2024	430,821	479,090	270,627	279,286	1,459,824
<b>Total</b>	<b>2,285,814</b>	<b>2,454,113</b>	<b>815,394</b>	<b>877,443</b>	<b>6,432,764</b>

## 2.2.10 Resources Made Available to Support Progress Made to Date

CMAA has developed a Resource Mobilization Strategy to strengthen efforts to address financial challenges and seize emerging opportunities. While traditional donors remain the primary and essential funding source for the mine action sector, Cambodia continues cultivating strong relationships with donors and development partners built on years of mutual trust and shared achievements. At the same time, CMAA remains committed to exploring collaboration with prospective donors.

To ensure effective funding strategies, CMAA has coordinated with relevant donors to analyze shifts in Overseas Development Assistance (ODA) budgets, evolving policy landscapes, and budget allocation processes. This assessment helps identify potential risks and opportunities to access funding streams.

CMAA will enhance engagement with a diverse donor base by collaborating with regional states, NGOs, and international organizations while fostering relationships with emerging and non-traditional donors, including the private sector. Expanding private sector involvement, as outlined in the NMAS 2018–2025, introduces an innovative approach to fundraising, particularly through implementing the Mine-Free Village Mechanism.

Additionally, demining operators have the flexibility to engage directly with donors, development partners, and international organizations to secure financial resources and technical support. This autonomy enables them to sustain and expand operations while aligning with national mine action priorities. By leveraging partnerships and external resources, operators can enhance the efficiency of mine clearance efforts, contributing to Cambodia's goal of becoming mine-free and improving community safety and livelihoods.

The table below presents resources made available to the Cambodian's mine action sector from various sources from 01 January 2020 to 31 December 2024.

*Table 4: Resources Mobilized from 01 January 2020 to 31 December 2024*

Year	Resources from the Royal Government of Cambodia (USD)	Resources from the international community (USD)	Resources from the private sector (USD)	Total (USD)
2020	\$6,243,248	\$33,799,050	0	\$40,042,298
2021	\$6,600,786	\$31,197,129	\$1,062,035	\$38,859,950
2022	\$4,458,086	\$32,210,589	\$20,046,596	\$56,715,271
2023	\$31,771,454	\$40,562,455	\$1,723,680	\$74,057,589
2024	TBU	\$57,523,175	\$873,000	TBU
<b>Total</b>	TBU	\$195,292,398	\$23,705,311	\$268,071,283

*Note: This figure covers the whole sector for both landmine and other ERW operations*

## 2.2.11 Funding implications

Limited resources made available: As stated in the previous extension request, Cambodia needed **USD 307,681,702** to release **659,640,427 m<sup>2</sup>** from 01 January 2020 to 31 December 2024. However, Cambodia was able to mobilize **USD 268,071,283** but was able to release **884,294,411 m<sup>2</sup>**. This indicates the operational efficiency of the mine action program in Cambodia.

*Table 5: Area planned to be released vs area actually released*

	2020	2021	2022	2023	2024	Total
Required budget (USD)	57,058,574	57,036,710	64,528,806	64,528,806	64,528,806	<b>307,681,702</b>
Planned APM area released (Sqm)	110,000,000	110,000,000	146,546,809	146,546,809	146,546,809	<b>659,640,427</b>
Actual budget (USD)	40,042,298	38,859,950	56,715,271	74,057,589	58,396,175	268,071,283
Actual APM area released (Sqm)	102,900,733	127,839,103	191,541,632	361,935,450	100,077,493	884,294,411

**Note:** Cambodia released 361,935,450 m<sup>2</sup> in 2023 and 100,077,493 m<sup>2</sup> in 2024. The peak performance in 2023 largely resulted from the **US\$ 30 million** contributions from the Royal Government of Cambodia toward mine clearance by the national operators. Unfortunately, due to economic difficulties, the Royal Government of Cambodia could not fund mine clearance in 2024.

### **3 NATURE AND EXTENT OF THE REMAINING ARTICLE 5 CHALLENGE**

#### **3.1 Quantitative Aspects**

##### **3.1.1 Remaining Contamination**

As of 01 January 2025, Cambodia still has **424,238,236** square meters of areas containing anti-personnel mines in the national database. Table 6 below shows the provinces that still have areas containing anti-personnel mines.

*Table 6: Provinces with Area Containing Anti-Personnel Mines as of 01 January 2025*

<b>Province</b>	<b>APM area (m2)</b>
1. Banteay Meanchey	39,876,952
2. Battambang	81,342,637
3. Kampong Thom	823,924
4. Koh Kong	15,760,005
5. Oddar Meanchey	68,396,487
6. Pailin	12,208,822
7. Preah Vihear	100,338,423
8. Pursat	92,251,338
9. Rattanak Kiri	112,118
10. Siem Reap	13,127,530
<b>Total</b>	<b>424,238,236</b>

Note: The RGC has tasked CMAC to conduct a comprehensive survey in cooperation with the RCA in the provinces bordering Thailand, especially the areas along the border. When the survey is completed, the remaining area is expected to increase. (*Ref. Action #17 of the Siem Reap Angkor Action Plan*).

##### **3.1.2 Humanitarian, Economic, Social and Environmental Implications**

Mines and ERW have caused over 65,000 casualties in Cambodia since 1979. While clearance efforts and risk education programs have reduced accidents, incidents still occur, particularly in rural areas along the Cambodia-Thailand border. Contaminated land prevents farming, infrastructure development, and settlement, hindering economic growth. Adult males are at higher risk due to their work in forests and fields, and survivors often face lifelong disabilities, medical needs, and financial difficulties. Beyond the direct threat to lives, mines and ERW also impede Cambodia's socio-economic development. A 2021 GICHD study highlighted that mine action contributes to 13 of the 17 Global Sustainable Development Goals.

APM continue to restrict safe access to agricultural land, housing, water resources, forests, and markets. They also pose challenges to national development projects, including hydropower plants, irrigation systems, and road construction, which require clearance before work can begin. Despite declining accident rates, many farmers risk entering uncleared land due to the urgent need for land for agricultural production. Between 01 January 2020 and 31 December 2024, there were 231 mine and ERW casualties (108 by mines and 123 by ERW). Casualties caused by mines were most frequent among those collecting food, clearing new land, and farming.

Chart 1: Mine/ERW Casualties by Province from 01 January 2020 to 31 December 2024

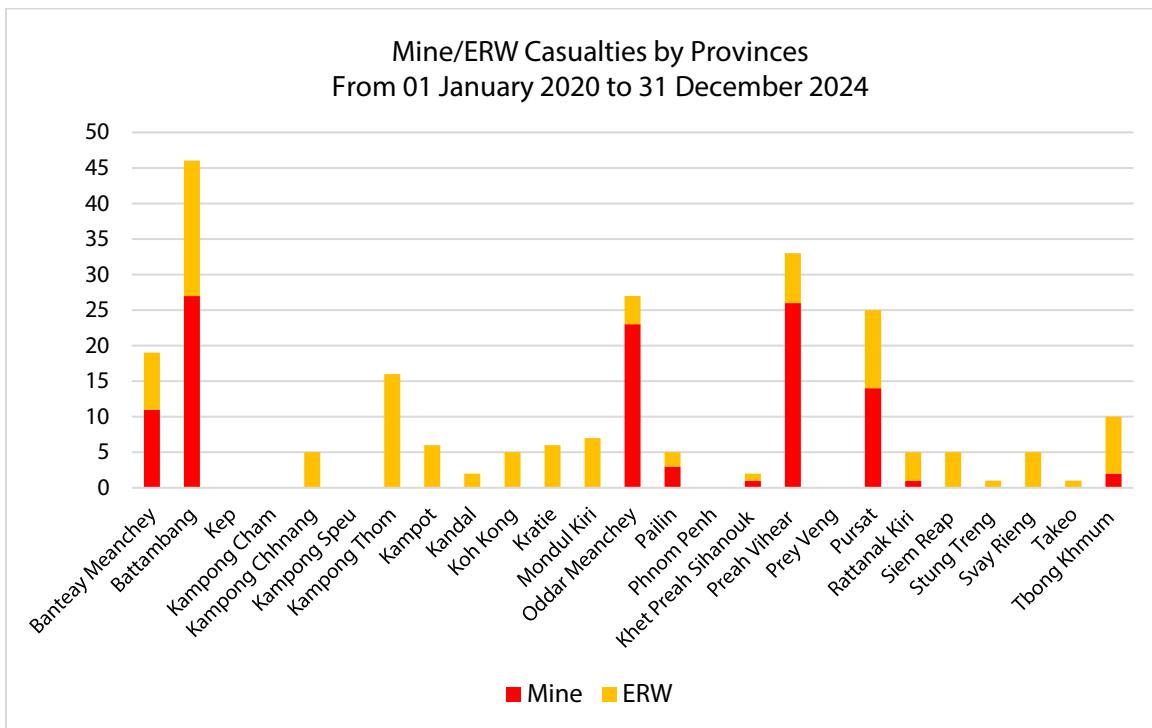

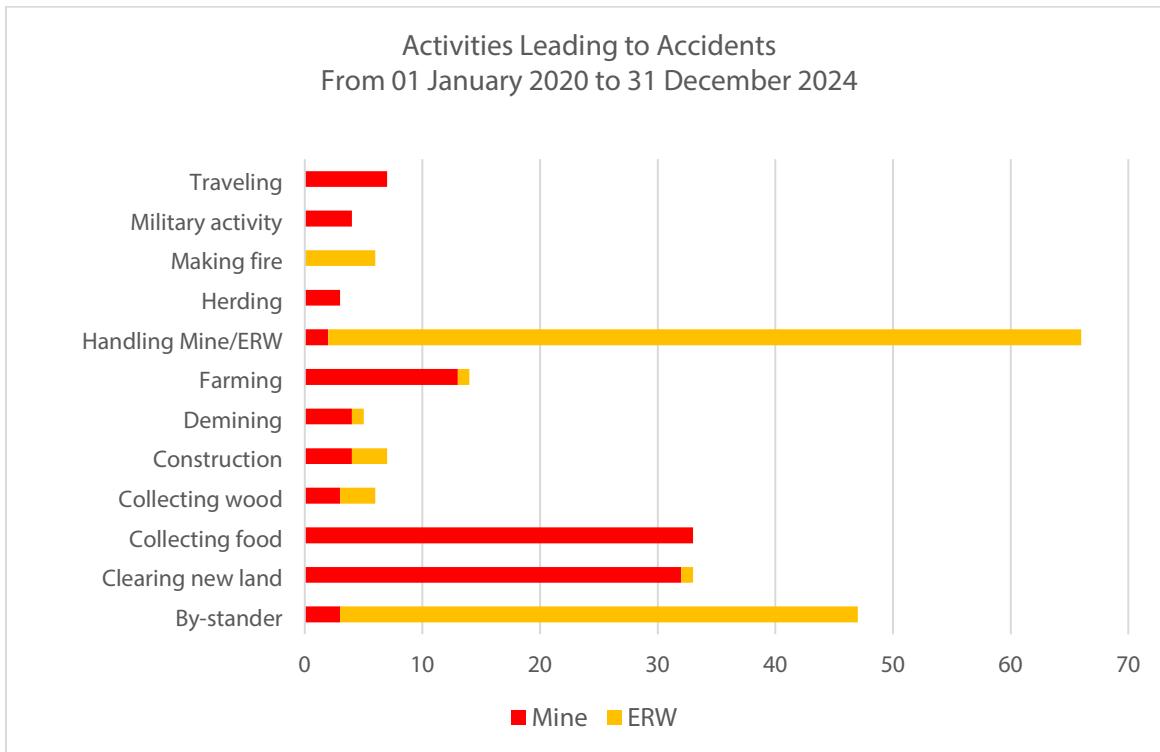

Chart 2: Activities Leading to Accidents from 01 January 2020 to 31 December 2024

### 3.2 Qualitative Aspects

In the second extension request, Cambodia aimed to release all known anti-personnel mine suspected areas by 2025. However, this goal could not be achieved due to the following circumstances that impeded compliance:

- The magnitude of the remaining problem and completing priorities of socio-economic development
- Needs to address other types of ERW contamination, namely anti-tank mines, cluster munitions, UXO, underwater contamination, and aerial bombs.
- Discovery of new minefields: According to the Cambodian Mine/ERW Victim Information System (CMVIS) report, approximately 49% of mine accidents over the past decade (2015–2024) occurred outside the minefields recorded in the national database, including inaccessible areas that were not covered in previous baseline surveys, particularly along the Cambodia-Thailand border. Therefore, a comprehensive baseline survey in these areas is essential. It is currently underway and expected to be completed by June 2025.
- Geographical Challenges: Landmine clearance has moved to more challenging minefields located in rugged mountainous terrain and dense forests, making access extremely difficult.
- Border Challenges: Challenges along the border between Cambodia and Thailand, including incomplete demarcation, hinder clearance of minefields in this area.

## **4 DETAILED WORK PLAN FOR THE PERIOD OF THE REQUESTED EXTENSION**

The following sections provide information on the measures to be taken and Cambodia's commitment to the principles and objectives of the Anti-Personnel Mine Ban Convention during the requested extension period. (*Ref. Action #23 of the Siem Reap Angkor Action Plan*).

### **4.1 Amount of Time Requested and Rationales**

Cambodia remains steadfast in its commitment to the principles and objectives of the APMBC. Acknowledging the remaining challenges, Cambodia seeks a five-year extension from **01 January 2026 to 31 December 2030**. The request period is based on the reality that, as of 01 January 2025, as of 1 January 2025, Cambodia still has **424,238,236** square meters of land contaminated by anti-personnel mines, according to the national database. However, once CMAC and RCA complete the comprehensive survey by June 2025, Cambodia will update the results of the anti-personnel mine contamination and resubmit them to the Article 5 Committee by August 2025 for data review and analysis. While Cambodia has made significant progress in mine clearance over the past decades, this extensive area underscores the ongoing complexity of mine action efforts in the country.

The extension will enable Cambodia to continue its comprehensive mine clearance efforts, safeguard communities, and fulfil its obligations under the APMBC. By addressing the remaining contamination, Cambodia aims to eliminate the threat of APM, providing communities with safer access to land and resources essential for sustainable development and economic growth. This commitment underscores Cambodia's dedication to a mine-free future, aligning with national development priorities and the global objective of a world free of APM.

### **4.2 Comprehensive Survey**

The RGC has tasked the CMAC to conduct a **comprehensive survey** (survey to identify contaminated areas) in the provinces bordering Thailand in collaboration with the RCA. This task

focuses particularly on the areas along the shared borders of the two countries, which are heavily affected by APM and other unexploded ordnances due to past conflicts. In the last 10 years (2015-2024), 49% of mine accidents occurred outside of the identified minefields. This indicates that many minefields still have not been surveyed in these areas. (*Ref. Action #17 of the Siem Reap Angkor Action Plan*).

The comprehensive survey, which commenced in November 2024 and is expected to be completed by June 2025, is a systematic survey to identify and document the remaining mine-affected areas in these border regions, and this survey will provide an accurate and up-to-date understanding of the extent of the remaining contamination in the country. Results from the survey will support planning, clearance prioritization, and resource mobilization.

The comprehensive survey initiative reflects the RGC's unwavering commitment to accelerating mine action efforts in a comprehensive and strategic manner, with the goal of achieving a mine-free Cambodia within the requested extension period. CMAC's survey expertise, in close collaboration with local authorities, affected communities, the Secretariat for Border Affairs, and the RCA, will ensure that the survey is conducted thoroughly, effectively, and efficiently. The outcomes of this survey will not only strengthen Cambodia's mine action initiatives but also play a vital role in enhancing cross-border cooperation and improving the safety, security, and livelihoods of communities along the Cambodia-Thailand border.

CMAC planned to survey the provinces in the following order: Banteay Meanchey, Oddar Meanchey, Preah Vihear, Pailin, Battambang, Pursat and Koh Kong. The survey in Banteay Meanchey commenced in November and was completed in December 2024. The survey was conducted in Oddar Meanchey Province while preparing this extension request.

Figure 4: CMAC team conducting survey in collaboration with the RCA and local authority and community.

Figure 6: CMAA QM team monitoring CMAC survey team in collaboration with the RCA.

To ensure the credibility of the survey results, CMAA has been closely monitoring the survey activities by deploying Quality Management Teams to conduct QA and QC of the survey process and results more frequently and ensure that any non-conformities are corrected immediately. The CMAA evaluates the survey process and results against the technical requirements outlined in the CMAS on Baseline Survey-Mine.

Table 7: Comprehensive Survey Plan

Provinces	Survey timeline	Total cost (US\$)	Status
Banteay Meanchey	November to December 2024	\$ 1,436,447	Completed
Oddar Meanchey	January to March 2025		Ongoing
Preah Vihear	April to May 2025		
Pailin	April to May 2025		
Battambang	April to June 2025		
Pursat	June 2025		
Koh Kong	April to June 2025		

#### 4.3 Annual Land Release Work Plan

As of 01 January 2025, Cambodia still has **424,238,236** square meters of land contaminated by anti-personnel mines recorded in the national database. Based on this data, Cambodia developed its provisional clearance work plan to serve the purpose of this extension request. When the CMAC's comprehensive survey is completed by June 2025, Cambodia will have a clearer picture of the remaining area affected by anti-personnel mines. This will enable the preparation and resubmission of an updated work plan to the Committee on Article 5 implementation by August 2025.

Table 8 presents a provisional land release target for the requested extension period. (*Ref. Action #18 of the Siem Reap Angkor Action Plan*).

Table 8: Provisional Land Release Target from 01 January 2026 to 31 December 2030

Year	Annual land release target (square meter)
2025	130,345,769
2026	126,400,000
2027	41,873,117
2028	41,873,117
2029	41,873,117
2030	41,873,117
<b>Total</b>	<b>424,238,236</b>

#### 4.4 Planning and Prioritization for Minefield Clearance

Cambodia is committed to maintaining effective, decentralized planning and prioritization throughout the requested extension period. This approach has been widely recognized for its positive impact, particularly in empowering affected communities to participate actively in decision-making regarding mine action activities. By involving local communities, the process

ensures that clearance efforts align with their immediate needs and long-term priorities, fostering a sense of ownership and inclusiveness. (*Ref. Action #29 of the Siem Reap Angkor Action Plan*).

The CMAA will continue to closely monitor the implementation of this process to ensure it remains effective and responsive to the evolving needs on the ground. Where necessary, the CMAA will introduce adjustments or refinements to enhance both the efficiency and impact of the planning and prioritization efforts, ensuring that resources are allocated strategically to achieve the greatest benefit for affected communities. This proactive approach underscores Cambodia's dedication to upholding transparency, community engagement, and adaptive management in mine action planning.

The CMAA will strategically coordinate the release of anti-personnel minefields based on their geographical location and priority. The immediate priority will be clearing minefields to ensure the security and safety of local communities and areas with the greatest need for socio-economic development.

The minefields located in complicated areas, including areas closer to the border, which might involve more complex considerations such as border security, accessibility, density of mines, and difficult terrain, will be approached and addressed in the later years of the extension, ensuring a comprehensive and orderly progression of demining efforts.

#### **4.5 Clearance of Minefields Along the Border with Thailand**

Records of Discussions have been established between the Cambodia-Thailand General Border Committee (GBC) regarding border cooperation, including demining activities. In line with these Records of Discussions, the clearance of minefields along the Cambodia-Thailand border will strictly adhere to the guidance and direction provided by the General Border Committee of Cambodia led by the Ministry of National Defense and the Joint Boundary Commission led by the Ministry of Foreign Affairs and International Cooperation. This ensures that mine clearance operations are carried out in a manner that respects bilateral agreements to avoid any potential misunderstandings or unnecessary conflicts.

Cambodia remains committed to cooperating closely with neighbouring countries to build a shared border of peace, friendship, collaboration, and development.

#### **4.6 Methods Used to Release Areas Containing Anti-Personnel Mines**

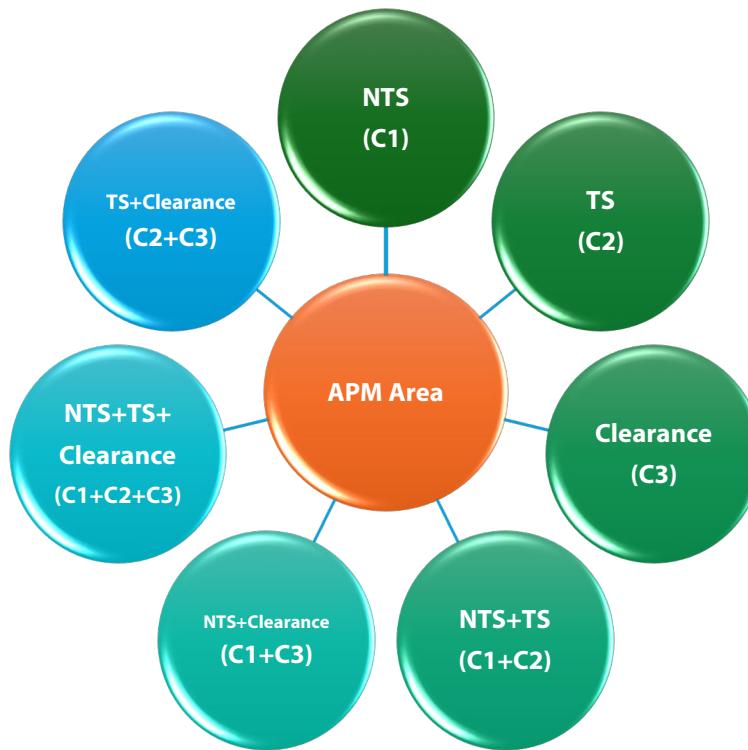

Cambodia will continue to actively promote and encourage all demining operators to adhere fully to the Cambodian Mine Action Standards 15 on Land Release. This commitment is vital to ensure that the highest standards are applied consistently across all land release operations. By adhering to the CMAS, operators can effectively implement the full range of land release methodologies currently being utilized to address APM-contaminated areas. These methodologies include:

1. **Non-Technical Survey (NTS):** Uses non-intrusive methods, such as field visits and data analysis, to assess and release suspected mine-contaminated areas. If no evidence of mines is found, the area is classified as **C1**. If uncertainty remains, the area proceeds with a technical survey or clearance.

2. **Technical Survey (TS):** Involves technical interventions to confirm the presence or absence of mines. If no mines are found, the area is classified as **C2**. If uncertainty remains, the area proceeds with clearance.
3. **Clearance:** The final step, applied when survey methods have been exhausted. It involves physically removing mines from well-defined areas. Cleared areas are classified as **C3**.

An APM contaminated area can be released through a single or a combination of the methods based on the characteristics and threats of the area, as presented in the chart below. The area that is released through non-technical surveys is classified as C1, technical surveys as C2, and clearances as C3.

*Chart 3: Methods available for releasing AP minefields*

Cambodia recognizes the importance of innovation in land release methodologies and actively encourages operators to adopt new technologies, tools, and approaches. These advancements enhance efficiency and effectiveness, accelerating the land release to provide safe land for productive use. By fostering compliance, collaboration, and innovation, Cambodia strengthens its commitment to achieving mine action goals in a timely and effective manner, contributing to the socio-economic development of affected communities.

#### **4.7 Mine Risk Education**

Mine Risk Education (MRE) is crucial in reducing the risk of landmine and Explosive Remnants of War (ERW) accidents by promoting safe behaviours among individuals living or working in

contaminated areas. MRE programs are continuously adapted to evolving needs and contexts, ensuring that high-risk areas, particularly those with vulnerable populations such as mobile adult workers and children, receive targeted education to minimize potential accidents.

To enhance the effectiveness of MRE, Cambodia will review and develop MRE messages and materials to raise awareness and encourage safe practices by considering gender and diversity inclusion. MRE is being integrated into survey, clearance, victim assistance, and other mine action efforts to reinforce risk education among affected communities. Additionally, MRE activities will be incorporated into broader humanitarian response plans, including protection, development, environmental conservation, education, and disaster risk reduction initiatives. Furthermore, MRE will be delivered in high-risk areas to promote preventive measures for affected populations and vulnerable groups. MRE activities will be adapted to the specific community situation. These activities include mass campaigns, billboards, leaflets, posters, textbooks, T-shirts, household visits, community-based volunteers, public service announcements, integrating MRE messages into school curricula, and strengthening the implementation of the law on the management of weapons, explosives, and ammunition. (*Ref. Action #27 of the Siem Reap Angkor Action Plan*).

Cambodia has over 10,000 community-based volunteers working nationwide to conduct MRE activities, which are considered an effective and sustainable approach for residual risk management, both in the short term and as part of a long-term risk education strategy.

Cambodia has planned to gradually transfer MRE skills and knowledge to local communities by continuing to train schoolteachers and police officers in the most affected provinces to enable them to provide MRE to school students and communities to ensure the sustainability of MRE efforts at the community level. (*Ref. Action #26, 28 of the Siem Reap Angkor Action Plan*).

TRG-EORE meetings will be organized at least once annually to discuss MRE materials, MRE planning, and the organization of the National Mine Awareness Day (24 February). CMAA will continue to develop a list of prioritized villages for annual MRE operations in consultation with MRE operators and mine/ERW casualty data (CMVIS). As part of its mandate, CMAA will regularly monitor the MRE operations and provide recommendations to improve effectiveness and efficiency of the MRE.

Providing MRE through reactive and proactive approaches is considered long-term prevention, under which the risk of future landmine accidents can be minimized. Ensuring that the community is well-informed and properly supported is essential for reducing the dangers posed by landmines. If an incident occurs in the un-surveyed area, the procedures must be established and followed to prioritize safety and ensure effective communication about the risks. Immediate Response ensures that no one else risks stepping on a landmine or being caught in a similar accident. Establish a safe perimeter around the accident site. The incident should be reported to local authorities, NGOs, and humanitarian organizations responsible for mine clearance. This helps to monitor hazardous areas and prevent future accidents.

After reporting, mine clearance teams will survey the area and ensure no further risk exists. Regular MRE will be carried out in high-risk areas to continuously educate and remind the population of the risks associated with landmines. Notify local authorities, mine action teams, or the relevant emergency services immediately. It's important to have trained personnel handle the situation. After the incident, conducting Mine Risk Education in the affected community is important.

Educate locals on how to spot dangerous areas and avoid landmines. In areas with frequent landmine risk, ensuring locals know safe behaviours is key to preventing further accidents; therefore, safety precautions will be provided through a comprehensive MRE program.

The table below presents the MRE workplan which includes the anticipated number of MRE sessions and beneficiaries from January 2025 to December 2030 across ten provinces. This workplan developed based on the accident report 2015-2024 and remaining APM contamination.

*Table 9 MRE Workplan for 2025 to 2030 in Provinces Affected by APM Contamination*

Province	Accident Report 2015-2024			Remaining APM Contamination		MRE Workplan for January 2025 to December 2030 in Provinces Affected by APM Contamination									
	Mine	ERW	Total	No. BLS	Area Size(sqm)	Description	2025	2026	2027	2028	2029	2030	Total		
Banteay Meanchey	41	12	53	698	39,876,952	MRE session	6,411	6,199	7,200	7,506	8,007	8,461	43,783		
						Beneficiary	176,269	175,153	178,955	178,976	180,777	181,538	1,071,668		
Battambang	54	33	87	767	81,342,637	MRE session	7,037	7,238	8,240	8,466	8,964	9,440	49,385		
						Beneficiary	261,196	263,348	267,554	264,483	265,522	264,761	1,586,863

#### **4.8 Gender and Diversity Mainstreaming in Mine Action**

The Cambodian Mine Action Standard (CMAS) on Gender and Diversity Mainstreaming in Mine Action was developed in September 2024. To ensure the effectiveness of CMAS implementation, the CMAA gender team will review guidelines to promote gender equality in mine action. Mine action organizations will develop standard operating procedures (SOPs), policies, and relevant documents in accordance with CMAS. Additionally, the CMAA's Gender Team plans to develop monitoring tools (procedures and forms) and a work plan, as well as conduct field monitoring to assess the implementation of the standard. They will provide recommendations to strengthen compliance with the standard.

The CMAA gender team will coordinate with mine action operators and other stakeholders to monitor and promote the implementation of gender and diversity mainstreaming in mine action plans.

## **4.9 Resource Mobilization**

CMAA has developed a Resource Mobilization Strategy to strengthen efforts to address financial challenges and seize emerging opportunities. While traditional donors remain the primary and essential funding source for the mine action sector, Cambodia continues cultivating strong relationships with donors and development partners built on years of mutual trust and shared achievements. At the same time, CMAA remains committed to exploring collaboration with prospective donors. (*Ref. Action #40 of the Siem Reap Angkor Action Plan*).

CMAA has coordinated with relevant donors to analyze shifts in Overseas Development Assistance (ODA) budgets, evolving policy landscapes, and budget allocation processes to ensure effective funding strategies. This assessment helps identify potential risks and opportunities to access funding streams.

CMAA will enhance engagement with a diverse donor base by collaborating with regional states, NGOs, and international organizations while fostering relationships with emerging and non-traditional donors, including the private sector. Expanding private sector involvement, as outlined in the NMAS 2018–2025, introduces an innovative approach to fundraising, particularly through implementing the Mine-Free Village mechanism.

Key forums for resource mobilization will include regular Technical Working Group on Mine Action meetings, which bring together key national and international stakeholders to review progress, discuss priorities, and explore opportunities for collaboration—bilateral meetings with foreign embassies in Cambodia to strengthen diplomatic ties and secure commitments from individual donor countries. Additionally, active participation in international donor meetings to present Cambodia's achievements, ongoing needs, and long-term plans further demonstrates transparency and accountability to global partners. Moreover, relevant government sessions will be leveraged to ensure strong domestic support for mine action efforts. (*Ref. Action #41 of the Siem Reap Angkor Action Plan*).

In parallel with resource mobilization efforts, the CMAA will provide regular updates on the sector's progress and development, including sharing key information on the status of mine clearance, advancements in land release methods, and overall achievements against strategic goals to establish open and transparent communication to keep the international community, private sector, and the Royal Government of Cambodia fully informed and engaged in supporting Cambodian mine action sector.

Additionally, demining operators can engage directly with donors, development partners, and international organizations to secure financial resources and technical support. This autonomy enables them to sustain and expand operations while aligning with national mine action priorities. By leveraging partnerships and external resources, operators can enhance the efficiency of mine clearance efforts, contributing to Cambodia's goal of becoming mine-free and improving community safety and livelihoods.

The following table presents the financial resources needed for the requested extension period. As the comprehensive survey in the provinces bordering Thailand is being conducted, the financial resources presented in the table are provisional. Upon completing the survey, Cambodia will provide an updated work plan to include realistic resource requirements.

*Table 10: Annual financial budget (provisional)*

<b>Year</b>	<b>Land release target (square meter)</b>	<b>Total budget of Land release (US\$)</b>
2025	130,345,769	\$ 35,944,228
2026	126,400,000	\$ 34,856,140
2027	41,873,117	\$ 11,546,956
2028	41,873,117	\$ 11,546,956
2029	41,873,117	\$ 11,546,956
2030	41,873,117	\$ 11,546,956
<b>Total</b>	<b>424,238,237</b>	<b>\$ 116,988,192</b>

Note: Cambodia requires US\$ **116,988,192**, subject to recalculation based on updated anti-personnel mine contamination data following the comprehensive survey in June 2025, to address the remaining challenges. The total cost is calculated based on an average rate of USD 0.28 per square meter.

#### **4.10 Sector Coordination**

To ensure the effective implementation of the work plan, Cambodia will maintain a robust three-tiered coordination system throughout the requested period. This system has proven functional and efficient, operating effectively at political, sector, and technical levels. Past experiences demonstrate that this layered approach fosters smooth collaboration, ensuring clear communication, accountability, and a streamlined process for addressing challenges and achieving objectives across all levels of government and stakeholders. (*Ref. Action #41 of the Siem Reap Angkor Action Plan*).

- Technical Working Group on Mine Action (TWG-MA): At the political level, the TWG-MA is led by the Royal Government represented by the CMAA, and it serves as a consultative mechanism between the Royal Government, development partners, NGOs and private sector to discuss policy issues to improve overall sector coordination, promote alignment and harmonization of aid and external resources for the mine action sector to contribute to the implementation of the National Mine Action Policy 2026-2035 and the National Strategic Development Plan 2024-2028. (*Ref. Action #42 of the Siem Reap Angkor Action Plan*).
- Mine Action Coordination Committee (MACC): At the sector level, the MACC is led by the CMAA with the participation of all mine action operators and partners, and it serves as a consultative mechanism between the national mine action authority (CMAA) and mine action operators to coordinate and guide operations toward achieving the objectives and goals of the National Mine Action Policy 2026-2035.
- Technical Reference Group (TRG): At the technical level, the TRG is led by relevant CMAA's Deputy Secretary Generals or Departmental Directors to discuss and seek solutions to resolve technical issues within their thematic areas. There are 8 TRG: (1) Survey and Clearance, (2) Explosive Ordnance Risk Education, (3) Gender and Diversity Mainstreaming

in Mine Action, (4) Victim Assistance, (5) Cluster Munitions Remnants Survey, (6) Information Management, (7) Capacity Development, and (8) Performance Monitoring System.

#### **4.11 Capacity to Manage Residual Threats**

Cambodia is committed to building a sustainable national capacity to manage residual contamination as part of its long-term mine action efforts. This capacity will address landmine and ERW contamination after large-scale clearance operations are completed. Establishing this capacity will ensure that Cambodia is well-prepared to manage residual contamination effectively, safeguard communities, and enable the continued use of land for socio-economic development. (*Ref. Action #21 of the Siem Reap Angkor Action Plan*).

Building the national capacity to manage residual contamination is a key component of the forthcoming National Mine Action Policy 2026-2035, which is currently in its final stages of development. The Policy outlines Cambodia's vision for transitioning from large-scale clearance to a sustainable residual contamination management framework. It also emphasizes building a highly skilled and equipped workforce capable of responding rapidly to mine and ERW reports, conducting surveys, and clearing hazardous areas efficiently.

By embedding the national capacity to manage residual contamination in the National Mine Action Policy, Cambodia aims to institutionalize its mine action capacity, enabling it to manage residual contamination. Through this effort, Cambodia reaffirms its dedication to creating a safe and productive environment for its people, ensuring that progress made in mine clearance is sustained over the long term.

It should be noted that after clearing all the known minefields, Cambodia still has a large area known to be contaminated by cluster munitions and other ERW to address. Establishing the national capacity to manage residual contamination must follow Goal 2 of National Mine Action Policy 2026-2035.

Establish a sustainable national capacity and framework to manage residual contamination, starting with a comprehensive review of the existing institutional framework, clearly defining roles and responsibilities, and identifying the key institutions responsible for managing residual contamination by 2028. By 2035, a robust legal framework will be established to address residual contamination effectively. Additionally, an operational framework for managing contamination by 2035 should be developed while simultaneously building a sustainable national capacity for residual management. A critical component of this effort will involve developing and implementing a transition plan that supports the demobilization process and facilitates the reemployment of affected deminers by 2035, ensuring a seamless shift toward sustainable management practices.

#### **4.12 The Risk Factors That May Affect the Realization of the Work Plan**

The following are perceived risks that may impact the successful realization of the work plan during the requested extension period:

- Geographical Challenges in Border Areas: Minefields along the Cambodia-Thailand border are in rugged mountainous terrain and dense forests, making access difficult.

- Discovery of new minefields: According to the Cambodian Mine/ERW Victim Information System (CMVIS) report, approximately 49% of mine accidents over the past decade (2015–2024) occurred outside the minefields recorded in the national database, including inaccessible areas that were not covered in previous baseline surveys, particularly along the Cambodia-Thailand border. Therefore, a comprehensive baseline survey in these areas is essential. It is currently underway and expected to be completed by June 2025.
- Incomplete Demarcation Border Areas: The presence of areas along the border that have not been completely demarcated poses significant risks. These areas can lead to uncertainties regarding access, potential disputes, and restrictions on demining activities. Such uncertainties may delay operations, create tension between the two countries, and impact the overall progress of the work plan.
- Availability of Financial Resources: The timely and sufficient allocation of financial resources is critical for executing the work plan. Any delays in funding, shortfalls, or reallocation of financial resources can hinder operational planning, limit access to necessary equipment and personnel, and disrupt the continuity of clearance activities. Financial constraints could also compromise the quality and efficiency of the operations, thereby affecting the achievement of planned objectives within the extension period.

## Annex 1: Consolidated PMS Report 2024

### Consolidated Case Study Report 2024 The Contribution of Landmine Clearance to Socio-Economic Development (November 2024)

#### Purpose and Scope

The purpose of this report is to present the socio-economic contribution of clearing 330 minefields in Battambang (125) and Banteay Meanchey (205). This report does not cover the contribution of other minefields cleared in these two provinces.

#### Data Collection and Analysis

The Mine Action Planning Unit (MAPU) of Banteay Meanchey and Battambang collected data from 330 minefields between April and June 2024. The data was then verified, cleaned, and analyzed by the Socio-Economic Planning and Database Management Department (SEPD) of the Cambodian Mine Action and Victim Assistance Authority (CMAA).

Figure 1: CMAA and MAPU staff interviewing a beneficiary

#### Clearance

The 330 minefields, covering 24,594,947 m<sup>2</sup>, were cleared between 2013 and 2023 with funding from various donors. The clearance resulted in the removal of 2,689 anti-personnel mines, 23 anti-tank mines, and 2,256 items of explosive remnants of war.

#### Beneficiaries

The clearance of 330 minefields directly and indirectly benefited 5,957 households, including 699 headed by women, comprising 25,276 people, of which 50% were women and girls, and 348 were persons with disabilities. Additionally, 205 students (79 females) benefited from the clearance of school grounds.

#### Price of Land

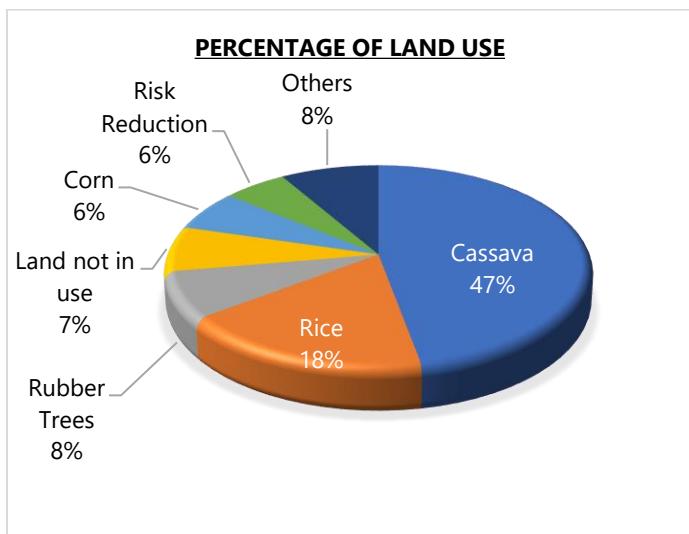

On average, the price of minefield land was \$1,223 per hectare before clearance. After clearance, the average price rose to \$10,437, representing an increase of more than eightfold.

**Note:** only land that could be sold both before and after clearance was included in the calculation of the average.

#### Land Use

At the time of data collection, the cleared land was used as follows:

Land Use	Area (m <sup>2</sup> )	Percent (%)
Cassava	12,807,604	47.07%
Rice	4,816,856	17.70%
Rubber Trees	2,056,972	7.56%
Land not in use	1,962,215	7.21%
Corn	1,752,747	6.44%
Risk Reduction	1,506,197	5.54%
Mango Trees	725,997	2.67%
Roads	548,067	2.01%
Houses	455,125	1.67%
Cashew Trees	417,035	1.53%
Schools	62,936	0.23%
Sweet Potato	57,106	0.21%
Pond	21,885	0.08%
Paper Trees	10,951	0.04%
Canal	4,270	0.02%
Pagoda	1,953	0.01%
Cowshed	2,500	0%
<b>Total</b>	<b>27,210,416</b>	<b>100%</b>

**Note:** 2,615,469 m<sup>2</sup> of the cleared land is used for cultivating two crops per year. As a result, the total land usage is 2,615,469 m<sup>2</sup> greater than the total area of the 330 cleared minefields.

## **Cassava**

A total of 12,807,604 m<sup>2</sup> (47.07%) of the cleared land was used for growing cassava. In the season before data collection, the cassava harvest yielded 42,745,557 kg, generating an income of \$3,152,658. The average cassava productivity was 33,375 kg per hectare.

Figure 2: an official of MAPU Battambang was pictured with farmers who cultivated cassava on a cleared land

## **Rice**

A total of 4,816,856 m<sup>2</sup> (17.7%) of the cleared land was used for rice cultivation. In the season before data collection, the rice harvest totaled 1,000,691 kg, with 332,006 kg kept for consumption and the remainder sold, generating an income of \$195,189. The average rice productivity was 2,077 kg per hectare.

## **Rubber Trees**

A total of 2,056,972 m<sup>2</sup> (7.56%) of the cleared land was used for planting rubber trees, which are expected to yield results in the coming years.

## **Land Not in Use**

A total of 1,962,215 m<sup>2</sup> (7.21%) of the cleared land was found to be unused at the time of data collection.

## **Corn**

A total of 1,752,747 m<sup>2</sup> (6.44%) of the cleared land was used for growing corn. In the season before data collection, 1,273,309 kg of corn was harvested and sold, generating an income of \$197,357. The productivity of corn was 7,265 kg per hectare.

## **Risk Reduction**

A total of 1,506,197 m<sup>2</sup> (5.54%) was cleared for risk reduction purposes.

## **Mango Trees**

A total of 725,997 m<sup>2</sup> (2.67%) of the cleared land was used for growing mango trees. In the season before data collection, 1,088,994 kg of mangoes were harvested and sold, generating an income of \$27,225. The productivity of mangoes was 15,000 kg per hectare.

## **Roads**

A total of 548,067 m<sup>2</sup> (2.01%) was cleared to ensure the safe use of 42 sections of roads, totaling 48,895 meters, which link villages to each other and to farmlands.

## **Houses**

A total of 455,125 m<sup>2</sup> (1.67%) was cleared to ensure the safety of 115 houses, which were constructed both before and after the clearance. The majority of these houses were roofed with corrugated iron.

## **Cashew Trees**

A total of 417,035 m<sup>2</sup> (1.53%) of the cleared land was used for growing cashew trees. In this season, 28,892 kg of cashew nuts were harvested and sold, generating an income of \$27,416. The productivity of cashew nuts was 693 kg per hectare.

## **Schools**

A total of 62,936 m<sup>2</sup> (0.23%) of the cleared land belongs to three schools. There are 205 students (79 females) who study at the schools.

Figure 3: Teachers and students from a primary school that had its land cleared

## **Sweet Potato**

A total of 57,106 m<sup>2</sup> (0.21%) of the cleared land was used to grow sweet potatoes. 97,080 kg of sweet potatoes were harvested and sold, generating an income of \$6,796. The productivity of sweet potatoes was 17,000 kg per hectare.

## **Ponds**

A total of 21,885 m<sup>2</sup> (0.08%) was cleared to ensure safe access to four water ponds from which community members collect drinking and utility water.

*Figure 4: This house's ground was cleared to ensure safety of the residents*

## **Paper Trees**

A total of 10,951 m<sup>2</sup> (0.04%) of the cleared land was used to grow paper trees (trees used for paper production). These trees are expected to yield results in the coming years.

## **Canal**

A total of 4,270 m<sup>2</sup> (0.02%) was cleared to provide safe access to a water canal that is 90 meters long.

## **Pagoda**

A total of 1,953 m<sup>2</sup> (0.01%) of a pagoda's land was cleared to ensure safe use of the area by community members.

## **Cowsheds**

A total of 2,500 m<sup>2</sup> of the cleared land was used to construct two loose housing cow sheds that accommodate 20 cows.

*Figure 5: Farmers preparing cassava tubers for planting*

## **Summary**

The clearance of the 330 minefields removed 2,689 anti-personnel mines, 23 anti-tank mines, and 2,256 items of explosive ordinance, preventing potential deaths and injuries. This effort provided affected communities—women, men, girls, and boys—with safe land for productive use and infrastructure development. The price of the minefield land increased by more than eightfold after clearance.

*Figure 6: Farmers in Banteay Meanchey removed weeds that grew in the cassava field*

Income from the sale of agricultural produce before data collection totaled \$3,606,641. This amount does not include rice (332,006 kg) kept for household consumption or the economic value of land cleared for roads, canals, pagodas, schools, houses, and land cleared for risk reduction.

In total, 83% of the cleared land was utilized for agricultural production.

*Figure 7: Farmers in Banteay Meanchey transported cassava tubers for planting*

## **1. INTRODUCTION**

The development of Cambodia's National Mine Action Policy (NMAP) 2026-2035 is the culmination of extensive collaborative efforts in mine action, grounded in a long history that encompasses all phases from conflict through to the management of residual contamination.

Cambodia's mine and explosive remnants of war (ERW) problem stems from prolonged internal and regional conflicts from the late 60s until 1998. Consequently, Cambodia is one of the most heavily contaminated countries globally, with over 65,000 mine/ERW casualties recorded since 1979.

In 1992, the Cambodia Humanitarian Mine Action Program was launched to address the dangers of explosive ordnance from these conflicts, aiming to clear landmines and ERW to reclaim contaminated land. By the end of 2024, Cambodia has cleared and released 3,297 km<sup>2</sup> of land contaminated by all forms of explosive ordnances, destroying 1,197,218 anti-personnel mines, 26,567 anti-tank mines, and 3,196,704 other explosive remnants of war. From 2022-2023, 695 km<sup>2</sup> of mine/ERW contaminated area was released; such remarkable achievement was made possible by unique and innovative approach to resource mobilization, which include Samdech Techo Project for Mine Action, the Foundation for a Mine-Free Cambodia 2025, and the significant contributions from the private sector.

This achievement underscores the effectiveness and dedication of the mine clearance efforts by the Royal Government of Cambodia (RGC), Development Partners and demining operators including the Cambodian Mine Action Centre (CMAC), the National Centre for Peacekeeping Force, Mine and ERW Clearance (NPMEC), the Royal Cambodian Army, the HALO Trust, Mines Advisory Group (MAG), Norwegian People's Aid (NPA), APOPO and Cambodian Self Help Demining (CSHD).

While significant successes have been achieved over three decades, substantial areas remain contaminated, presenting ongoing challenges. Consequently, Cambodia faces difficulties in meeting its goal of becoming mine-free by 2025, as outlined in the National Mine Action Strategy (NMAS 2018–2025). Therefore, adopting a forward-looking policy to manage long-term mine action programs and address residual explosive ordnance threats is crucial.

As of January 2025, the CMAA National database indicates that Cambodia has remaining mine/ERW contaminated areas of 1,697 km<sup>2</sup>, which include:

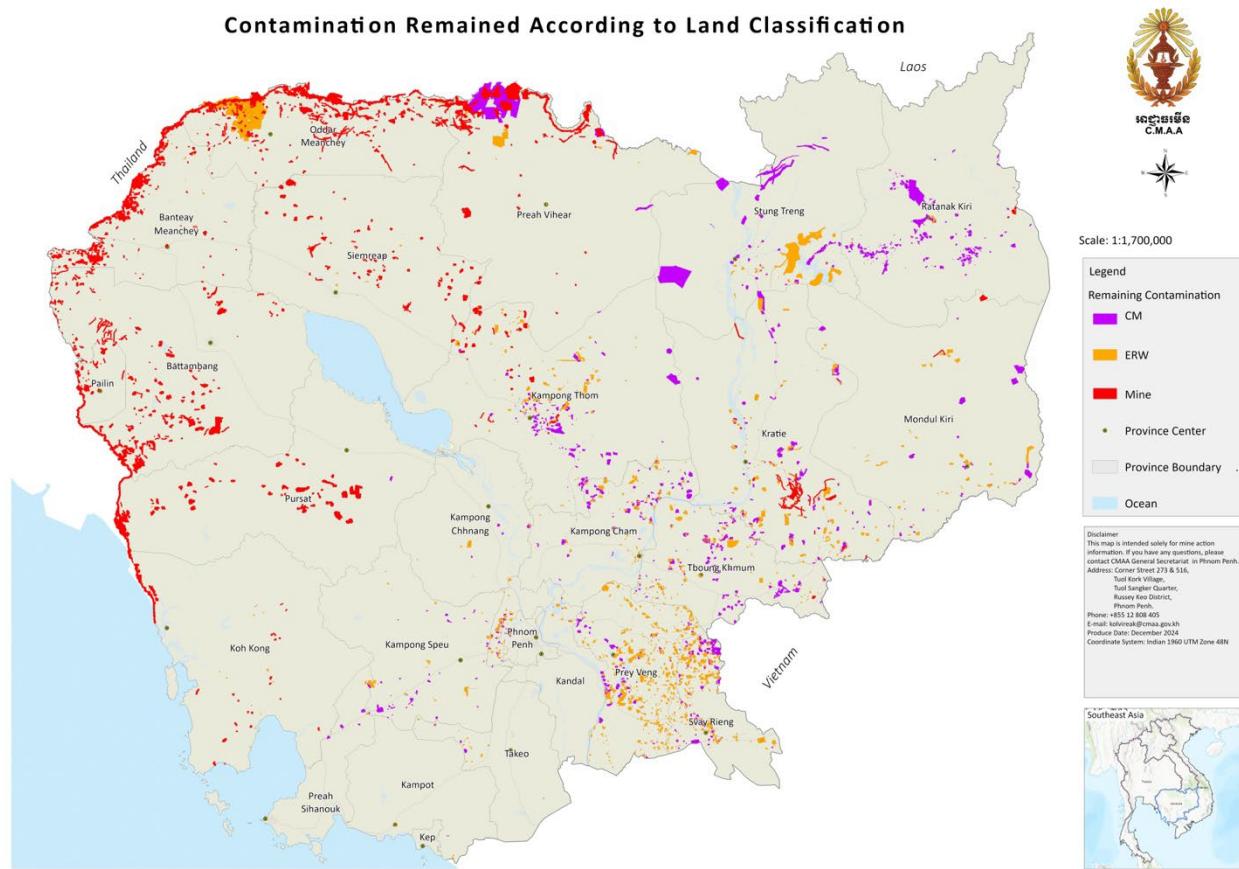

- landmine areas: 469 km<sup>2</sup> (28%)
- cluster munition areas: 681 km<sup>2</sup> (40%)
- explosive remnants of war areas: 547 km<sup>2</sup> (32%)

According to CMAA National Database, about 1 million people reside in these contaminated areas. This data does not include contaminated areas which may be surveyed and found in the future, including areas contaminated by anti-tank mines.

Addressing landmine and ERW contamination contributes to socio-economic development, gender equality, disability inclusion, poverty reduction, and environmental sustainability. Therefore, Cambodian mine action aligned with the RGC's broader national objectives, as outlined in the Political Platform of the Seventh Legislature of the National Assembly for Nation Building and Defense (2023–2028) and the Pentagonal Strategy-Phase I of the RGC of the Seventh Legislature of the National Assembly. Cambodia's commitment to mine action reflects its dedication to global peace and prosperity, aiming to create a safer environment for its citizens and contribute to international efforts to eliminate landmines and explosive hazards worldwide.

Mine action is stipulated in the National Strategic Development Plan (NSDP) 2024-2028, given its potential to unlock opportunities for inclusive development across the country and to achieve Cambodian Sustainable Development Goal (CSDG) 18 titled "End the Negative Impact of Mines/Explosive Remnants of War (ERW) and Promote Victim Assistance".

This CSDG reflects Cambodia's unique challenges due to its history of conflict and the widespread presence of landmines and ERW. The CSDG 18 highlights Cambodia's commitment to addressing the legacies of war and ensuring that mine action contributes to long-term peace, safety, and development.

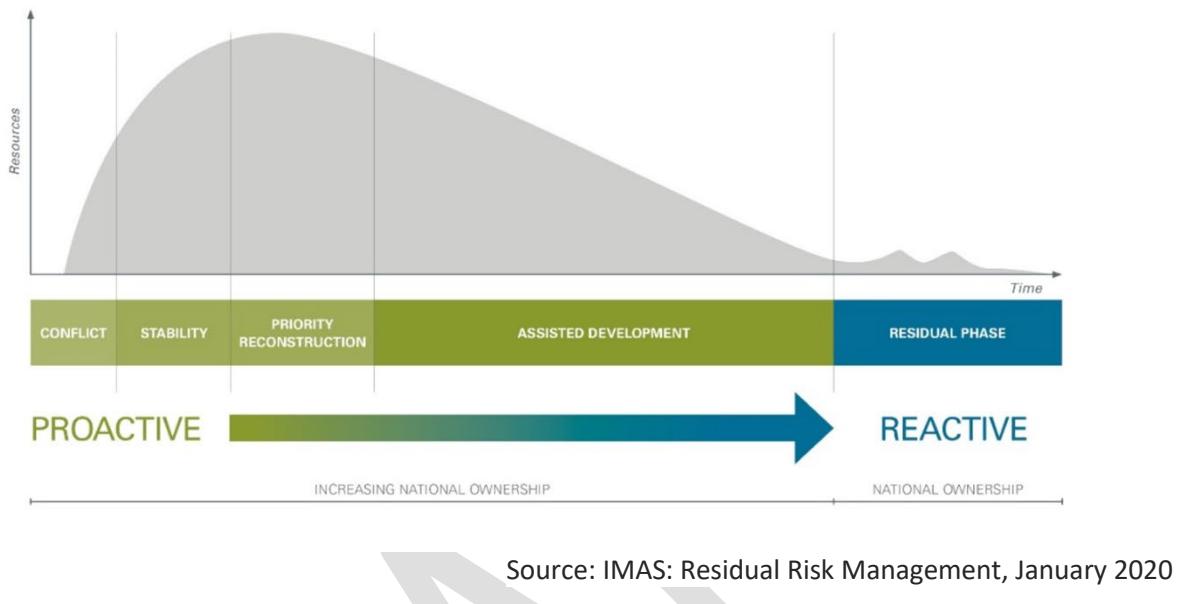

On an international level, Cambodia became a State Party to the Anti-Personnel Mine Ban Convention (APMBC) on 1 January 2000, demonstrating its commitment to eradicating landmines. Cambodia is also a party to the Convention on Certain Conventional Weapons (CCW) protocol I, II, III, IV, including Amended Protocol II on the Prohibitions or Restriction on the Use of Mines, Booby-Traps and Other Devices.

On 24 November 2023, during the 21<sup>st</sup> Meeting of States Parties to the Anti-Personnel Mine Ban Convention in Geneva, Switzerland, Cambodia was elected as President and Host of the Fifth Review Conference. This landmark event, named "The Siem Reap-Angkor Summit on a Mine-Free World", was held from November 25–29, 2024 in Siem Reap, marking Cambodia as the first Asian nation to assume this prestigious role, which solidifies Cambodia's leadership in global mine action and its dedication to a world free of landmines.

Cambodia has strengthened its commitment to regional and international disarmament through active participation in the United Nations peacekeeping and mine clearance operations. Through the ASEAN Regional Mine Action Center (ARMAC), Cambodia has advanced regional cooperation and improved the effectiveness of mine action initiatives across ASEAN. Through its South-South cooperation capacity-building initiatives, Cambodia has become a key player in sharing knowledge and expertise, fostering collaborative solutions to address landmine and ERW threats globally.

Over the past three decades, Cambodia's humanitarian demining has evolved through various stages: from conflict to stabilization, followed by priority reconstruction and assisted development. Initially, demining efforts were proactive, focusing on immediate threats. However, as the program approaches its final stage, Cambodia will transition to a more reactive approach to effectively manage residual contamination (as illustrated in the diagram below).

## PROGRAMME LIFE CYCLE FOR MINE ACTION PLANNING FOR LONGTERM RISK MANAGEMENT

According to the International Mine Action Standards (IMAS 04.10 October 2024):

‘Residual contamination refers to contamination which gives rise to residual risk. Residual risk is the risk remaining following the application of all reasonable effort to identify, define, and remove all presence and suspicion of explosive ordnance through non-technical survey, technical survey and/or clearance. All reasonable effort describes what is considered a minimum acceptable level of effort to identify and document contaminated areas or to remove the presence or suspicion of explosive ordnance. All reasonable effort has been applied when the commitment of additional resources is considered to be unreasonable in relation to the results expected.’

In Cambodia the clearance obligations under APMBC have been completed in some provinces; and in the coming years, Cambodia will have cleared all its known mine, cluster munition, and a significant amount of other ERW contamination. Residual Contamination Management (RCM) can be progressively applied in the provinces left with residual contamination only. RCM will require a review of Cambodia’s established legal, institutional and operational frameworks, as well as the development of cost-effective systems, mechanisms and tools.

The NMAP 2026-2035, developed by CMAA in consultation with mine action stakeholders, builds on the successes and lessons of the National Mine Action Strategy (NMAS) 2018-2025, aiming to further strengthen the sector's effectiveness. It reflects the RGC's long-term vision by addressing remaining contamination challenges and providing a comprehensive roadmap for mine action over the coming decades.

Key intentions of the Policy include:

- Establishing periodic three-year rolling implementation plans, including monitoring systems to ensure accountability and progress.
- Offering a framework for legal, institutional and operational direction to guide Cambodia's mine action sector, ensuring structures and approaches evolve to meet future needs.
- Emphasizing the building of national capacities to effectively oversee, coordinate, and implement responses, addressing the complex nature of contamination from landmines to ERW, including cluster munitions.
- Ensuring environmental sustainability, gender sensitivity and diversity, and the needs and rights of mine victims and survivors are fully integrated into mine action efforts.
- Creating effective, integrated Explosive Ordnance Risk Education (EORE) programs to reduce the impact of explosive ordnance on communities.
- Encouraging active participation and collaboration among national and sub-national agencies, as well as citizens, aligning with Cambodia's sustainable development agenda.
- Promoting international cooperation and assistance, while meeting Cambodia's treaty obligations related to mine action.
- Mobilizing domestic and international resources essential for supporting Cambodia's ongoing mine clearance and victim assistance efforts.

Through these efforts, the Policy aims to achieve a Cambodian nation free from the impact of landmines and ERW, promote socio-economic development in affected communities, and ensure long-term safety and resilience for all citizens.

Accordingly, Cambodia's vision statement articulates the nation's long-term goals and aspirations, serving as a source of inspiration, motivation, and guidance for all stakeholders, while the mission statement guides the development, implementation, and evaluation of the Policy's objectives and strategies.

## **2. VISION**

Cambodia free from the impact of explosive ordnance, enabling sustainable livelihoods and fostering peace, stability and development.

### **3. MISSION STATEMENT AND GUIDING PRINCIPLES**

To support achieving the above vision, the Cambodia mine action sector has established its mission and guiding principles. By adhering to them, the mine action sector can optimize efforts and contribute meaningfully to achieving Cambodia's vision.

#### **MISSION STATEMENT**

Provide safety for communities by clearing explosive ordnance, contribute to poverty reduction and socio-economic development, and ensure that the rights of explosive ordnance victims are upheld, and their needs are addressed.

#### **GUIDING PRINCIPLES**

1. Alignment with Cambodia's development strategies.
2. Adherence to standards and best practices.
3. Maximization of effectiveness, efficiency, and transparency.
4. Continuous improvement through innovation.
5. Promotion of gender sensitivity and diversity.
6. Integrity, accuracy and accessibility of data.
7. Consultative and participatory approaches.
8. Commitment to leaving no one behind.
9. Environmental stewardship.
10. Respect for human rights and dignity.

#### **4. GOALS, OBJECTIVES AND STRATEGIES**

The RGC is deeply committed to its vision of ensuring that all provinces and villages are free from the impacts of explosive ordnance. This commitment aims to enable sustainable livelihoods while fostering peace, stability, and development throughout the nation. To realize this vision, the comprehensive NMAP 2026-2035 serves as a blueprint for all efforts by stakeholders in mine action.

The Policy presents a logically structured approach that outlines interconnected goals, objectives, strategies, and implementation mechanisms to achieve the stated vision.

At its core, the Policy is centered on six major **goals**, which provide a strong direction for the future and outline the desired outcomes. The major goals dealing with clearance and managing residual contamination have firm target dates.

Each of these goals is supported by specific **objectives** that identify measurable and actionable steps to achieve the overarching aims within defined timelines.

In support of these objectives, a series of **strategies** detail the methods and actions necessary to accomplish the objectives and, ultimately, the goals. This structured approach ensures that NMAP 2026-2035 is not only aspirational but also practical and actionable, facilitating effective implementation and progress tracking.

Furthermore, the goals and objectives build upon the successes, lessons and momentum established by the previous National Mine Action Strategy 2018-2025, charting a clear course for the next decade. Through this cohesive framework, Cambodia is poised to make significant strides to finish the job in addressing the challenges posed by landmines and ERW.

##### **GOALS**

1. Release all known landmine-contaminated areas by 2030, all known cluster munitions and prioritized explosive remnants of war (ERW) contaminated areas by 2035.
2. Establish sustainable national capacity and framework to manage residual contamination.
3. Provide effective explosive ordnance risk education (EORE) tailored to the changing needs and contexts.
4. Provide comprehensive and effective services and assistance to explosive ordnance victims.
5. Promote effective international cooperation and assistance in mine action.
6. Ensure all mine action activities address cross-cutting issues and leverage enabling factors.

## **OBJECTIVES AND STRATEGIES**

### **Goal 1:**

**Release all known landmine-contaminated areas by 2030, all known cluster munitions and prioritized explosive remnants of war (ERW) contaminated areas by 2035.**

### **Objectives and strategies**

#### **1.1 Release all known landmine-contaminated areas by 2030.**

- 1.1.1 Undertake survey work in response to any emerging threats and community reporting.
- 1.1.2 Develop annual operational work plans to release all known landmine-contaminated areas.
- 1.1.3 Implement the annual operational work plans to release all known landmine-contaminated areas.
- 1.1.4 Continue to engage in constructive regional negotiations and mediation to facilitate mine clearance in border areas.

#### **1.2 Release all known cluster munitions contaminated area by 2035.**

- 1.2.1 Undertake survey work in response to any emerging threats and community reporting.
- 1.2.2 Develop annual operational work plans to release all known cluster munitions-contaminated areas.
- 1.2.3 Implement the annual operational work plans to release all known cluster munitions contaminated areas.

#### **1.3 Release prioritized ERW contaminated areas by 2035.**

- 1.3.1 Develop annual operational work plans to release prioritized ERW contaminated areas.
- 1.3.2 Implement the annual operational work plans to release prioritized ERW contaminated areas.

**Goal 2:**

**Establish sustainable national capacity and framework to manage residual contamination.**

**Objectives and strategies**

- 2.1 Review institutional framework, define roles and responsibilities and identify relevant institutions to manage residual contamination by 2028.**
  - 2.1.1 Research international best practice and approaches to manage residual contamination.
  - 2.1.2 Review Cambodia's institutional framework to manage residual contamination.
  - 2.1.3 Define the roles and responsibilities and identify relevant institutions to manage residual contamination.
- 2.2 Ensure legal framework to manage residual contamination is established by 2035.**
  - 2.2.1 Review existing legal framework to manage residual contamination.
  - 2.2.2 Research options and determine liability policies.
  - 2.2.3 Establish suitable legal framework to manage residual contamination.
- 2.3 Establish operational framework to manage the residual contamination by 2035.**
  - 2.3.1 Review existing operational framework to manage residual contamination in consultation with operators.
  - 2.3.2 Pilot RCM procedures in mine-free provinces by 2026.
  - 2.3.3 Develop, test and refine operational framework to manage residual contamination.
  - 2.3.4 Develop and implement communications strategy to inform the public.
- 2.4 Develop a readiness and sustainable national capacity to manage residual contamination by 2035.**
  - 2.4.1 Map out national capacities required for managing residual contamination and match with capabilities of existing organizations / agencies.
  - 2.4.2 Conduct capacity development needs assessment of institutions managing residual contamination.
  - 2.4.3 Formulate capacity development plans include information management systems, mechanisms, specialized staff skills and equipment at national and sub-national levels to effectively manage residual contamination.
  - 2.4.4 Implement the capacity development plan.
- 2.5 Develop and implement a transition plan to support the demobilization and reemployment plan for mine action personnel / workforce by 2035.**

- 2.5.1 Consult stakeholders in the mine action sector to develop workforce transition and succession plans.
- 2.5.2 Review skills and career opportunities and develop a transition plan to support demobilization, retraining and reemployment by 2030.
- 2.5.3 Implement the demobilization and reemployment plan.

### **Goal 3:**

**Provide effective explosive ordnance risk education (EORE) tailored to the changing needs and contexts.**

#### **Objectives and strategies**

- 3.1. Review and develop EORE messages and materials to promote awareness and safe behavior.**
  - 3.1.1. Assess and evaluate the effectiveness of existing EORE messages and materials.
  - 3.1.2. Analyze casualty data and behaviors of at-risk groups.
  - 3.1.3. Engage local communities in planning and implementing community based EORE activities to ensure alignment with their needs.
  - 3.1.4. Develop EORE messages and materials informed by analyses of gender, age, disability-disaggregated data, tailored to target audiences and the specific behaviors to be promoted.
- 3.2. Integrate EORE activities in survey, clearance and victim assistance activities and other mine action efforts to raise awareness, reduce the risk to the affected population.**
  - 3.2.1. Promote the implementation of EORE through land release operations.
  - 3.2.2. Facilitate the provision of EORE through explosive ordnance victims, emergency response and disability public forum.
  - 3.2.3. Ensure the sustainability of EORE programs by strengthening national and subnational structures.
- 3.3. Integrate EORE activities into wider plans for humanitarian response and protection, development, the environment, education, and/or disaster risk reduction.**
  - 3.3.1. Review and continue mainstreaming EORE in school curriculum.
  - 3.3.2. Analyze non-compliance and strengthen the implementation of Law on the Management of Weapons, Explosives and Ammunition in conjunction with the policy of safety village-commune-district and safety in school.

- 3.3.3. Coordinate with relevant institutions/ministries to integrate EORE in development, disaster and environmental management.
  - 3.3.4. Provide alternative income generation for ‘forced’ at-risk groups to divert them from dangerous salvaging ERW and entering hazardous areas.
- 3.4. Deliver EORE in high-risk areas to promote preventive measures for affected populations and vulnerable groups.**
- 3.4.1. Promote comprehensive EORE campaign in high-risk areas.
  - 3.4.2. Strengthen EORE community-based networks.
  - 3.4.3. Conduct EORE sessions in high-risk areas.
  - 3.4.4. Enhance EORE effectiveness by ensuring perspectives and needs of the women, girls, boys, and men and those from vulnerable groups are considered in the planning, implementation, monitoring and evaluation of EORE programs.
  - 3.4.5. Ensure effectiveness of EORE delivery tools and methods (including social media, digital apps, influencers) in response to changing needs and context.

#### **Goal 4:**

**Provide comprehensive and effective services and assistance to explosive ordnance victims.**

#### **Objectives and strategies**

- 4.1 Enhance the national mine action database to effectively manage information on explosive ordnance victims.**
- 4.1.1 Assess existing application systems being deployed by organizations implementing victim assistance to define and standardize necessary data fields.
  - 4.1.2 Develop the application system for managing explosive ordnance victims considering data from stakeholders.
- 4.2 Provide effective emergency response, continuing medical care, and rehabilitation services.**
- 4.2.1 Enhance stakeholder coordination in providing emergency response and continuing medical care.
  - 4.2.2 Develop referral pathway mechanisms and service mapping.
  - 4.2.3 Ensure the comprehensiveness and sustainability of the rehabilitation services.
  - 4.2.4 Consider innovative assistance models such as minibus service which transports the injured people to rehabilitation clinics

**4.3 Provide effective psychological and psychosocial support.**

- 4.3.1 Increase and enhance the capacity of psychological and psychosocial support practitioners.
- 4.3.2 Ensure that psychological and psychosocial support is accessible to all explosive ordnance survivors.

**4.4 Enhance the quality of life of explosive ordnance victims through socio-economic inclusion.**

- 4.4.1 Equip explosive ordnance victims with marketable skills, create job opportunities, and provide financial assistance to promote their economic independence.
- 4.4.2 Provide victims with access to healthcare, social services, and community-based support to foster their full participation in society.

**4.5 Promote the implementation of legal, strategic, and operational frameworks to support persons with disabilities.**

- 4.5.1 Review, enhance and develop legal and strategic frameworks supporting explosive ordnance victims.
- 4.5.2 Promote the implementation of legal, strategic, and operational frameworks.

**Goal 5**

**Promote effective international cooperation and assistance in mine action.**

**Objectives and strategies**

**5.1 Promote ratification of/accession to the APMBC by States not party including encouraging their participation in the work of the Convention.**

- 5.1.1 Support states not party to join the APMBC through diplomatic outreach, fostering dialogue to raise awareness and providing technical assistance.
- 5.1.2 Encourage states not party to participate in the work of the Convention.

**5.2 Comply with the obligations under APMBC and Protocols I, II, III, IV, and Amended Protocol II of CCW.**

- 5.2.1 Follow up the Action Plan and Declaration from the Siem Reap-Angkor Summit on a Mine-Free World 2024.

- 5.2.2 Ensure APMBC obligations, particularly Article 7 on transparency measures and Article 5 on destruction of APMs are fully complied.
- 5.2.3 Ensure CCW obligations are fully complied.

**5.3 Foster national consensus for accession to CCW Protocol V and amended Article I, and conduct a feasibility study on joining the CCM.**

- 5.3.1 Contribute to building consensus among national stakeholders towards acceding to Protocol V and amended Article I of CCW.
- 5.3.2 Conduct a feasibility study and take positive steps towards Cambodia's accession to CCM.

**5.4 Support United Nations peacekeeping operations in mine action.**

- 5.4.1 Ensure mine action operations under UN Peacekeeping Operations are accredited to IMAS.
- 5.4.2 Deploy RCAF qualified demining and EOD teams under the UN Peacekeeping Operations.

**5.5 Enhance international cooperation and assistance through sharing knowledge and experience in mine action.**

- 5.5.1 Establish a formal system among Cambodian's mine action organizations to share knowledge and experience internationally.
- 5.5.2 Share knowledge and experience in mine action with other EO-affected states through training programs, exchange visits, workshops, and other collaborative initiatives.
- 5.5.3 Continue to play an active role in the research and programs of the ASEAN Regional Mine Action Center.
- 5.5.4 Establish museums to showcase the history, management, and processes of mine action in Phnom Penh and other provinces.

**Goal 6:**

**Ensure all mine action activities address cross-cutting issues and leverage enabling factors.**

**Objectives and strategies**

**6.1 Ensure that gender and diversity are considered in all aspects of mine action.**

- 6.1.1 Review the guidelines on Gender Mainstreaming in Mine Action in Cambodia to ensure compliance with the CMAS on Gender and Diversity Mainstreaming in Mine Action.

6.1.2 Monitor the compliance with CMAS and implementation of Gender and Diversity Mainstreaming in Mine Action.

6.1.3 Implement and provide resources for Gender and Diversity Mainstreaming in Mine Action.

**6.2 Ensure that environment and climate change issues are considered in all aspects of mine action.**

6.2.1 Promote awareness of environment and climate change impact on all aspects of mine action.

6.2.2 Apply do no harm principle in all steps of mine actions, including waste management.

6.2.3 Monitor mine action activities and promote compliance with the CMAS on Environmental Management in Mine Action.

**6.3 Ensure that development issues are considered in all aspects of mine action.**

6.3.1 Promote integration of development activities in mine-affected areas in the Commune Investment Plans.

6.3.2 Conduct socio-economic impact studies to evaluate contribution of demining to economic development and poverty alleviation

6.3.3 Encourage activities to contribute to sustainable development and enhance the livelihoods of people in mine-affected areas (such as climate smart agriculture, agro-processing, and value-chain enhancement).

6.3.4 Periodically review the Planning and Prioritization guidelines to align with community needs and evolving environment.

**6.4 Develop and implement a comprehensive resource mobilization strategy to ensure financial sustainability for mine action.**

6.4.1 Develop, as a top priority, a comprehensive resource mobilization strategy. This strategy should aim to leverage a wide range of partnerships, embrace innovative financial models, diversify funding sources, build and sustain strong donor relationships, and utilize effective marketing approaches.

6.4.2 Proactively engage with a wide range of stakeholders, including governments, bilateral donors, development partners, corporations, businesses, philanthropic foundations and individual donors.

6.4.3 Craft a compelling narrative emphasizing mine action's vital role in global peace, security, sustainable development, and its contributions to Cambodia's Sustainable Development Goals (CSDGs).

6.4.4 Ensure transparency, accountability and efficiency in resource allocation through regular financial reports and comprehensive monitoring systems.

**6.5 Enhance capacity development of national mine action staff to effectively implement and manage mine action programs.**

6.5.1 Conduct a capacity needs assessment across the mine action sector to identify existing gaps and anticipate future demands.

- 6.5.2 Develop a comprehensive capacity development strategy addressing individual, organizational, and institutional needs based on the assessment.
  - 6.5.3 Implement comprehensive, multifaceted capacity development initiatives through the application of various methodologies, approaches, and techniques.
  - 6.5.4 Assess the effectiveness of capacity development initiatives, to enhance outputs, outcomes and optimize work performance.
- 6.6 Advance the use of innovative technologies and methodologies in mine action through research and development.**
- 6.6.1 Foster culture of innovation to encourage research and development of new technologies for mine action.
  - 6.6.2 Adapt, acquire and apply new technologies to advance all areas of mine action.
- 6.7 Optimize information management, to enhance data quality, accessibility and usability.**
- 6.7.1 Enhance data quality, accuracy, reliability, and consistency of data collected through the information management system.
  - 6.7.2 Build capacity and foster innovation and adoption of new technologies to improve data collection, analysis, reporting and supporting decision making.
  - 6.7.3 Increase accessibility and usability to ensure that the information management system is user-friendly and accessible to all stakeholders involved in mine action.
- 6.8 Enhance quality management systems and practices.**
- 6.8.1 Regularly review and update CMAS and SOPs to stay current with evolving demands, technological advancements, and international standards, ensuring the highest safety levels.
  - 6.8.2 Ensure effective implementation and continuous improvement of quality management practices in mine action.
- 6.9 Strengthen and ensure effective monitoring and evaluation practices.**
- 6.9.1 Develop a monitoring matrix in close collaboration with stakeholders as part of the implementation plans.
  - 6.9.2 Enhance the capacity to monitor and report on M&E activities.
  - 6.9.3 Conduct regular independent evaluations to assess the mine action program effectiveness and drive continuous improvement.

## **5. ACTION PLAN**

A series of implementation plans will be developed within the framework of the overarching NMAP 2026-2035 to outline the action needed for its implementation.

Supporting the NMAP, the following key components will be developed or enhanced.

### **A. MECHANISMS**

NMAP 2026-2035 is founded on the established mechanisms that support mine action activities including systems, processes, procedures, and guidelines designed to ensure the effective performance of specific functions and achieve desired outcomes. As humanitarian mine action continues to evolve, new mechanisms will be introduced, trialed, standardized, and formalized. These mechanisms have been developed collaboratively by key stakeholders, operators and the national authority (the CMAA).

In the next ten years, as the mine action sector transitions into a residual contamination phase, various mechanisms will be established to coordinate responses, reporting, risk assessment, public awareness, and quality management, among others. These measures will be part of the readiness and sustainability of interventions. An important mechanism involving an inter-ministerial committee will also be established to assist in the demobilization and reemployment of the mine action workforce.

Significantly, Cambodia's mechanisms for planning, prioritization, coordination, and collaboration have consistently proven effective over time. To maintain their relevance and effectiveness, these mechanisms will undergo regular reviews and updates, ensuring alignment with current demands and developments.

#### **Planning and prioritization**

Effective planning and prioritization are vital for the success of mine action efforts in Cambodia. The current resource allocation mechanisms effectively integrate top-down and bottom-up approaches, ensuring that demining resources are directed towards developmental needs and community priorities. This system identifies priority areas for clearance of landmine and cluster munitions, with results communicated to both provincial and national levels.

In 2022, the planning and prioritization process was enhanced by the mine-free village initiative, which successfully attracted non-traditional donors and private sector funding. CMAA oversees these mechanisms, placing a strong emphasis on transparency, decentralization and community participation. This approach aims to maximize socio-economic benefits for affected communities, ensuring that the impacts of mine action extend beyond clearance to foster sustainable development.

#### **Coordination and collaboration**

To ensure the effective implementation of the NMAP 2026-2035, Cambodia will maintain a robust three-tiered coordination system. This system has proven to be both functional and efficient, operating effectively at political, sector, and technical levels. Past experiences demonstrate that this layered approach fosters smooth collaboration, ensuring clear communication, accountability, and a streamlined process for addressing challenges and achieving objectives across all levels of government and stakeholders.

- **Technical Working Group on Mine Action (TWG-MA):** At the political level, the TWG-MA is led by the Royal Government represented by the CMAA. It serves as a consultative mechanism between the Royal Government, development partners, NGOs and private sector to discuss policy issues with the aim of improving overall sector coordination, promoting alignment and harmonization of aid and external resources for the mine action.
- **Mine Action Coordination Committee (MACC):** At the sector level, the MACC is led by the CMAA with the participation of all mine action operators and partners. It serves as a consultative mechanism between CMAA and mine action operators to coordinate and guide operations.
- **Technical Reference Groups (TRGs):** At the technical level, the TRGs are led by relevant CMAA Deputy Secretary Generals or Departmental Directors with the aim of discussing and seeking solutions to resolve technical issues within their thematic areas. There are 8 TRGs: (1) Survey and Clearance, (2) Explosive Ordnance Risk Education, (3) Gender and Diversity Mainstreaming in Mine Action, (4) Victim Assistance, (5) Cluster Munitions Remnants Survey, (6) Information Management, (7) Capacity Development, and (8) Performance Monitoring System.

## B. FRAMEWORKS

### 1. Legal framework

The legal framework governing the mine action sector in Cambodia consists of international conventions, national legislation and Royal Decrees. These instruments establish a comprehensive structure for governance, enabling a national regulatory institution for effectively managing mine action programs in the country.

The key international legal instruments are:

- Convention on Certain Conventional Weapons (CCW)
- Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-Personnel Mines and on their Destruction (APMBC)
- Convention on the Rights of Persons with Disabilities. (CRPD)

The key national legal instruments are:

- Law to Ban the Use of Anti-Personnel Landmines (NS/RKT/0599/03)
- Law on the Management of Weapons, Explosives and Ammunition
- Law on the Protection and the Promotion of the Rights of Persons with Disabilities
- Legal Instrument Establishing the Cambodian Mine Action and Victim Assistance Authority (CMAA) (Royal Decree: NS/RKT/0900/160)

## **2. Institutional framework**

The architecture of mine action in Cambodia separates regulatory and operational functions. This arrangement will remain in practice until any revisions are officially determined by the RGC.

The key functional elements include:

- The Cambodian Mine Action and Victim Assistance Authority responsible for overarching governance, policy formulation, regulation and monitoring.
- Planning and prioritization process which involves top-down prioritization based on CMAA's evidence-based criteria and bottom-up approach coordinated by local Mine Action Planning Units designed to be transparent, participatory, and decentralized.
- Service providers and operators including organizations involved in demining, explosive ordnance risk education (EORE), and victim assistance (VA).
- Expert organizations providing specialized knowledge and support to enhance mine action efforts such as United Nations Development Programme, International Campaign to Ban Landmines, Geneva International Centre for Humanitarian Demining.
- Development partners and donors that collaborate to provide resources and technical assistance.

Through these institutions and functions, the mine action sector in Cambodia will effectively manage and coordinate demining operations, uphold high safety standards, and fulfill its obligations under both international and national laws.

## **3. Operational framework**

A comprehensive and standardized operational framework is crucial for the success of any mine action program. It enhances safety, efficiency, and compliance, thereby improving overall demining effectiveness. This framework includes national mine action standards, regulations, guidelines and the standard operating procedures (SOPs) of accredited operators to ensure consistency, standardization and uniformity. Such elements are essential for maintaining high-quality safety standards and support various aspects of operations, including quality management, accountability, training and continuous improvement.

Given the dynamic nature of mine action, the framework must be adaptable. Standards and SOPs should be periodically reviewed and updated to incorporate new techniques, technologies and insights, ensuring that organizations stay at the forefront of best practices.

Cambodia has developed and refined 24 national mine action standards (CMAS) in alignment with the international mine action standards (IMAS), encompassing all critical aspects of humanitarian mine action, including gender, diversity and environmental management. As the sector transitions to residual contamination phase, it will be essential to develop and implement new national standards, procedures, guidelines, to ensure continued success and sustainability.

However, most importantly, an enforceable legal framework will be required to govern the mitigation of risks posed by residual explosives discovered after the proactive mine action phase. This framework will safeguard the public from harm caused by explosive remnants, ensure accountability and enforce compliance.

### **C. FINANCIAL SUPPORT**

Maintaining strong relationships with donors will be essential, including measures to keep donors informed, acknowledge their contributions and offer engagement opportunities. This strategy is crucial for ensuring long-term sustainability as Cambodia transitions to addressing residual contamination by 2035. This is a role of the CMAA as well as key mine action operators in Cambodia.

The Cambodian mine action sector has successfully mobilized resources to support its activities since its inception.

However, as pro-active demining efforts are near completion throughout the decade, the sector is likely to face significant challenges in securing sustainable funding such as ‘donor fatigue’ and while donors reorient their other international development priorities and regions of the world. To address this, in 2026 CMAA and the mine action sector will develop a comprehensive actionable resource mobilization strategy that empathizes innovative approaches and diversified funding sources. A key element of this strategy will be crafting a compelling narrative that highlights the importance of mine action, its global role in promoting peace, security, and sustainable development, and its contributions to Cambodia’s Sustainable Development Goals (CSDGs).

The resource mobilization strategy will aim to diversify funding by engaging a wide range of stakeholders, including governments, bilateral donors, development partners, corporations, CSR-focused businesses, philanthropic foundations and individual donors. The strategy will incorporate a variety of strategic marketing approaches, such as partnerships, sponsorships, crowdfunding and public events. Additionally innovative financial models will be explored, such as blended finance and Social Impact Bonds. Transparency and efficient resource

allocation will be prioritized through regular financial reports and comprehensive monitoring systems.

Based on the latest available data, implementing the strategies outlined in the National Mine Action Policy will require an estimated budget of USD 266,648,253 over the ten-year period from 2026 to 2035. This estimate accounts for prioritizing 50% of the ERW-contaminated areas for land release but excludes financial allocations designated for the CMAA and contributions to United Nations peacekeeping operations in mine action.

#### **D. CAPACITY BUILDING**

The Cambodian mine action sector is dedicated to continuous improvement and aims to solidify its position as a global leader in demining operations. This commitment is reflected in its focus on advanced technologies, improved data collection, integration of gender mainstreaming, environmental sustainability and climate resilience into its practices.

To successfully implement the NMAP 2026-2035, the sector will address capacity development at three essential levels: individual, organizational, and institutional.

- **individual level:** Staff must maintain professional proficiency to deliver effective and efficient performance sustainably.
- **organizational level:** Staff working together in various roles need a different set of knowledge and skills to understand the diverse functions of humanitarian mine action and related works, as well as managerial abilities such as managing activities in field or office settings, whether in roles as team leaders, operation officers or department directors.
- **institutional level:** Senior mine action managers require institutional knowledge and skills to engage effectively in policy development, inter-ministerial communication, sectoral coordination, resource mobilization, representation, and community outreach.

Possessing knowledge and skills at these three levels will ensure that the sector's efforts are both effective and impactful. The sector will enhance national capacity through comprehensive training programs led by experts at the middle and senior manager courses as well as other short technical courses. Other methods such as coaching and mentoring, peer-to-peer learning, training the trainers, seminars, workshops, and exchange visits will also be utilized. These programs will be meticulously designed based on thorough Training Needs Assessments to ensure they address the specific requirements and challenges faced by the sector.

These initiatives will strengthen technical and managerial competencies, optimize resource use, and empower Cambodian professionals to deliver high-quality performance, bolstering Cambodia's reputation in humanitarian mine action. Furthermore, mine action organizations will develop research initiatives and provide professional development opportunities, through attending high-education institutions, events and study tours.

Incorporating cutting-edge technologies will ensure personnel remain at the forefront of international best practices. Continuous skills and technology assessments, along with retraining as needed, will help maintain leadership and contribute to enhancing global humanitarian mine action standards.

These efforts will not only preserve, enhance and create knowledge, but also facilitate the transfer of expertise to younger generations, particularly as Cambodia enters a phase of managing residual contamination.

## **E. IMPLEMENTATION**

Under the guiding framework of the NMAP 2026-2035, action plans will be developed to align with the goals outlined in this Policy, aiming to achieve the distinct yet interconnected objectives. The development of these plans will begin immediately and be time-bound according to the objectives programmed in this Policy.

**Future priorities include:**

- **accelerated clearance** of mines, cluster munitions and explosive remnants of war to render safety for the affected communities
- **enhance EORE** to reduce casualties and **improve victim assistance** to enhance the victims' quality of life
- **promote mine action activities that foster economic growth and poverty eradication** to benefit the local community
- **develop the first 3-year implementation plan** aligning with the goals and objectives of this NMAP, including the comprehensive monitoring and evaluation plan; additionally, advance the development of annual work plans to ensure continuous progress and adaptation
- **develop a comprehensive resource mobilization strategy** focusing on innovative approaches, diversified funding sources, and transparent resource allocation
- **review and develop institutional and legal frameworks** to allocate different functions, regulate, and oversee the sector especially in support of the residual contamination management (RCM) phase
- **establish a readiness and sustainable capacity to manage residual contamination** during the RCM phase
- **comprehensively assess and review existing mechanisms, guidelines, standards, and procedures** to ensure they remain relevant, reflect current best practices, and adapt to evolving challenges
- **develop, test, pilot and implement new procedures, guidelines, mechanisms and national standards** to address emerging needs particularly in the preparation for the RCM phase

- **formulate and implement a transition plan** addressing the well-being of the mine action workforce as they move into the residual contamination phase to support the demobilization and reemployment.
- **regularly monitor and evaluate the NMAP 2026-2035** to ensure progress and adaptation to changing needs. A **mid-term review in 2031** is necessary to periodically assess effectiveness, address challenges, and help to achieve its goals.

## 6. MONITORING AND EVALUATION

Monitoring and Evaluation (M&E) efforts are critical to achieving the NMAP 2026-2035 goals, ensuring interventions align with intended outcomes, optimize resource use, and foster continuous improvement. The mine action sector in Cambodia is committed to enhancing its M&E systems to ensure accountability, safety, efficiency, and effectiveness. M&E will be integrated into all phases of the mine action cycle—planning, implementation, and post-implementation—to guide decision-making and efficient resource allocation.

### Monitoring

Progress will be tracked through an indicator's matrix in the three-year Implementation Plans, with reports generated every three years. Monitoring will track key metrics such as areas cleared, individuals trained in EORE, and victims assisted, while maintaining high safety and quality standards. The system will also adapt to changes in environmental and community needs. CMAA will continue using its effective Performance Management System (PMS) for ongoing assessment and improvement.

### Evaluation

Regular independent evaluations of mine action programs will measure relevance, efficiency, sustainability, safety, and long-term outcomes, using various types of evaluations including baseline, mid-term, summative, and impact assessments.

A mid-term evaluation of the Policy will be conducted in 2031 to promote learning, identify gaps, drive innovation and enhance safety. Collaboration with government bodies, donor agencies, local organizations, and communities will ensure transparency and inform future planning and improve implementation.

## **7. CONCLUSIONS**

Although Cambodia has made great progress over the last 30 years through survey, clearance, EORE and victim assistance activities, much work remains. The NMAP 2026–2035 provides a comprehensive blueprint for the country's mine action sector, outlining its vision, mission, principles, goals, objectives, and strategies for the next decade. This Policy serves as a guiding beacon for decision-making and strategic direction.

Under this Policy, three-year implementation plans will translate broad objectives into actionable steps and priorities, covering all phases of mine action, including the transition to residual contamination management. Detailed Implementation and Action Plans will further specify tasks, timelines, responsible parties, and required resources. These plans will also address key components such as legal, institutional and operational frameworks, capacity building, and resource mobilization.

The Policy prioritizes reducing casualties through accelerated land release, enhanced EORE and strengthening survivor support programs, including care, rehabilitation, and livelihood opportunities. It also highlights Cambodia's active participation in global knowledge-sharing and United Nations peacekeeping efforts, highlighting the importance of international cooperation and disarmament. Moreover, it integrates mine action into the broader sustainable development agenda, addressing socio-economic issues, environmental and climate challenges, promoting gender equality and combating poverty.

The RGC is confident that through the collaborative efforts of national and sub-national ministries, institutions, development partners, national and international organizations, civil society, the private sector, communities, families, and individual citizen, this Policy will be successful. These collective efforts are essential for raising awareness, providing necessary assistance and advancing Cambodia's mine action objectives.

## **8. ACRONYMS AND ABBREVIATIONS**

<b>APMBC</b>	Anti-Personnel Mine Ban Convention
<b>APOPO</b>	Anti-Persoonsmijnen Ontmijnende Product Ontwikkeling
<b>ARMAC</b>	ASEAN Regional Mine Action Center
<b>ASEAN</b>	Association of Southeast Asian Nations
